1 Solitudism

Individual Work
24 Weeks

Loneliness is feeling alone and not liking it;
it' s a feeling.

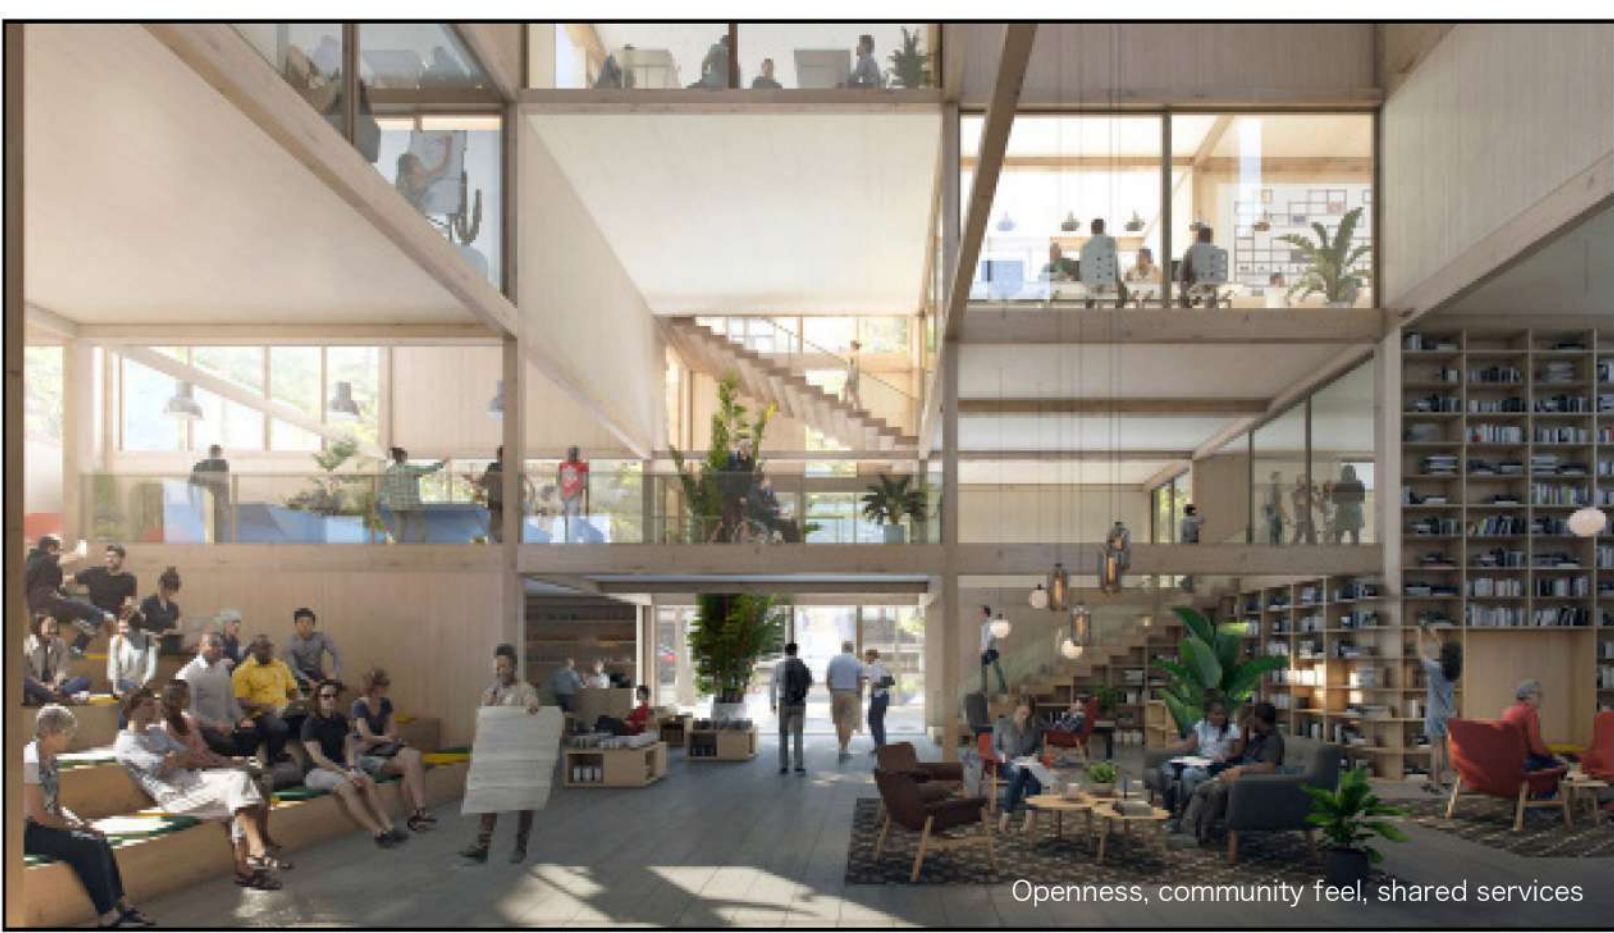

Solitudism is being alone and content;
it' s a choice.

I designed spaces for people to master
solitude.

Solitude is someone's initial desire

Loneliness is a societal health issue that can affect everyone, however, companionship shouldn't be the only way to relieve it. We have been educated from a young age to participate in groups, people who prefer to be in solitude are seen as outliers often.

Openness, community feel, shared services

The experience of being in solitude

in the "Designed" world, we usually feel obliged to design socially engaging spaces rather than through improvement of quality in the experience of being alone.

Solitude

≠

Loneliness

Being alone and content

Feeling alone and hate it

Mastering Solitude

“Grassland”

I designed three spaces for solitary dining, reading and practising, as alternative ways to combat loneliness.

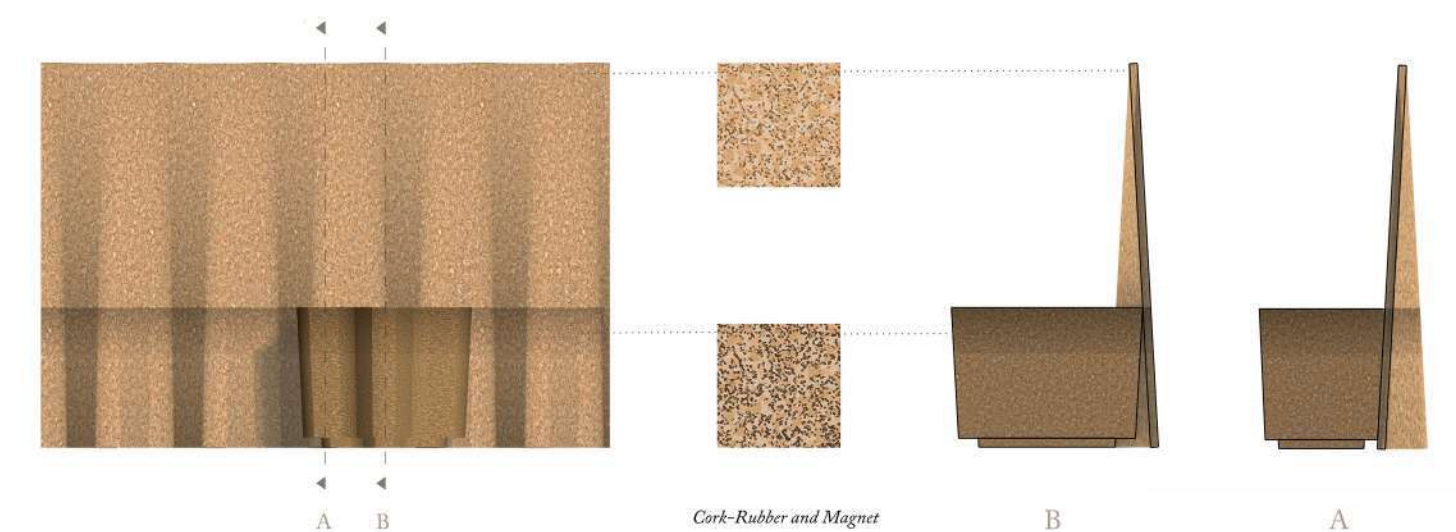

In ‘Grassland’ people are free to hide in freestanding flexible cork-rubber partitions. Roaming between them is not easy, the deeper you go, the more undisturbed you become. When you choose a stool, wrap the partition around it, you can enjoy disconnection and remain in solitude for a period.

Partions

Perspective View

“Mountain Top”

'Mountaintop' is a reading place on your way home from work. It is located on the top of an unknown building near an underground station. The tunnel is only for one person to choose books and buy. The shallowly marked seats on the mountain ensure distance and avoid eye contact.

Enjoy Solitude

Site Location: London Bridge Station

The 'Caves' are where you practice musical instruments. You are free to switch between practice alone or performance with other people. The shapes are designed for different instrument reverberations.

Royal College of Art

It' s a pub design in east London

I started a study of the London Pubs, developing a reliable and sustainable pub design through a history of the pub, a detailed analysis of the site, and a reflection on the process of birck making and beer brewing.

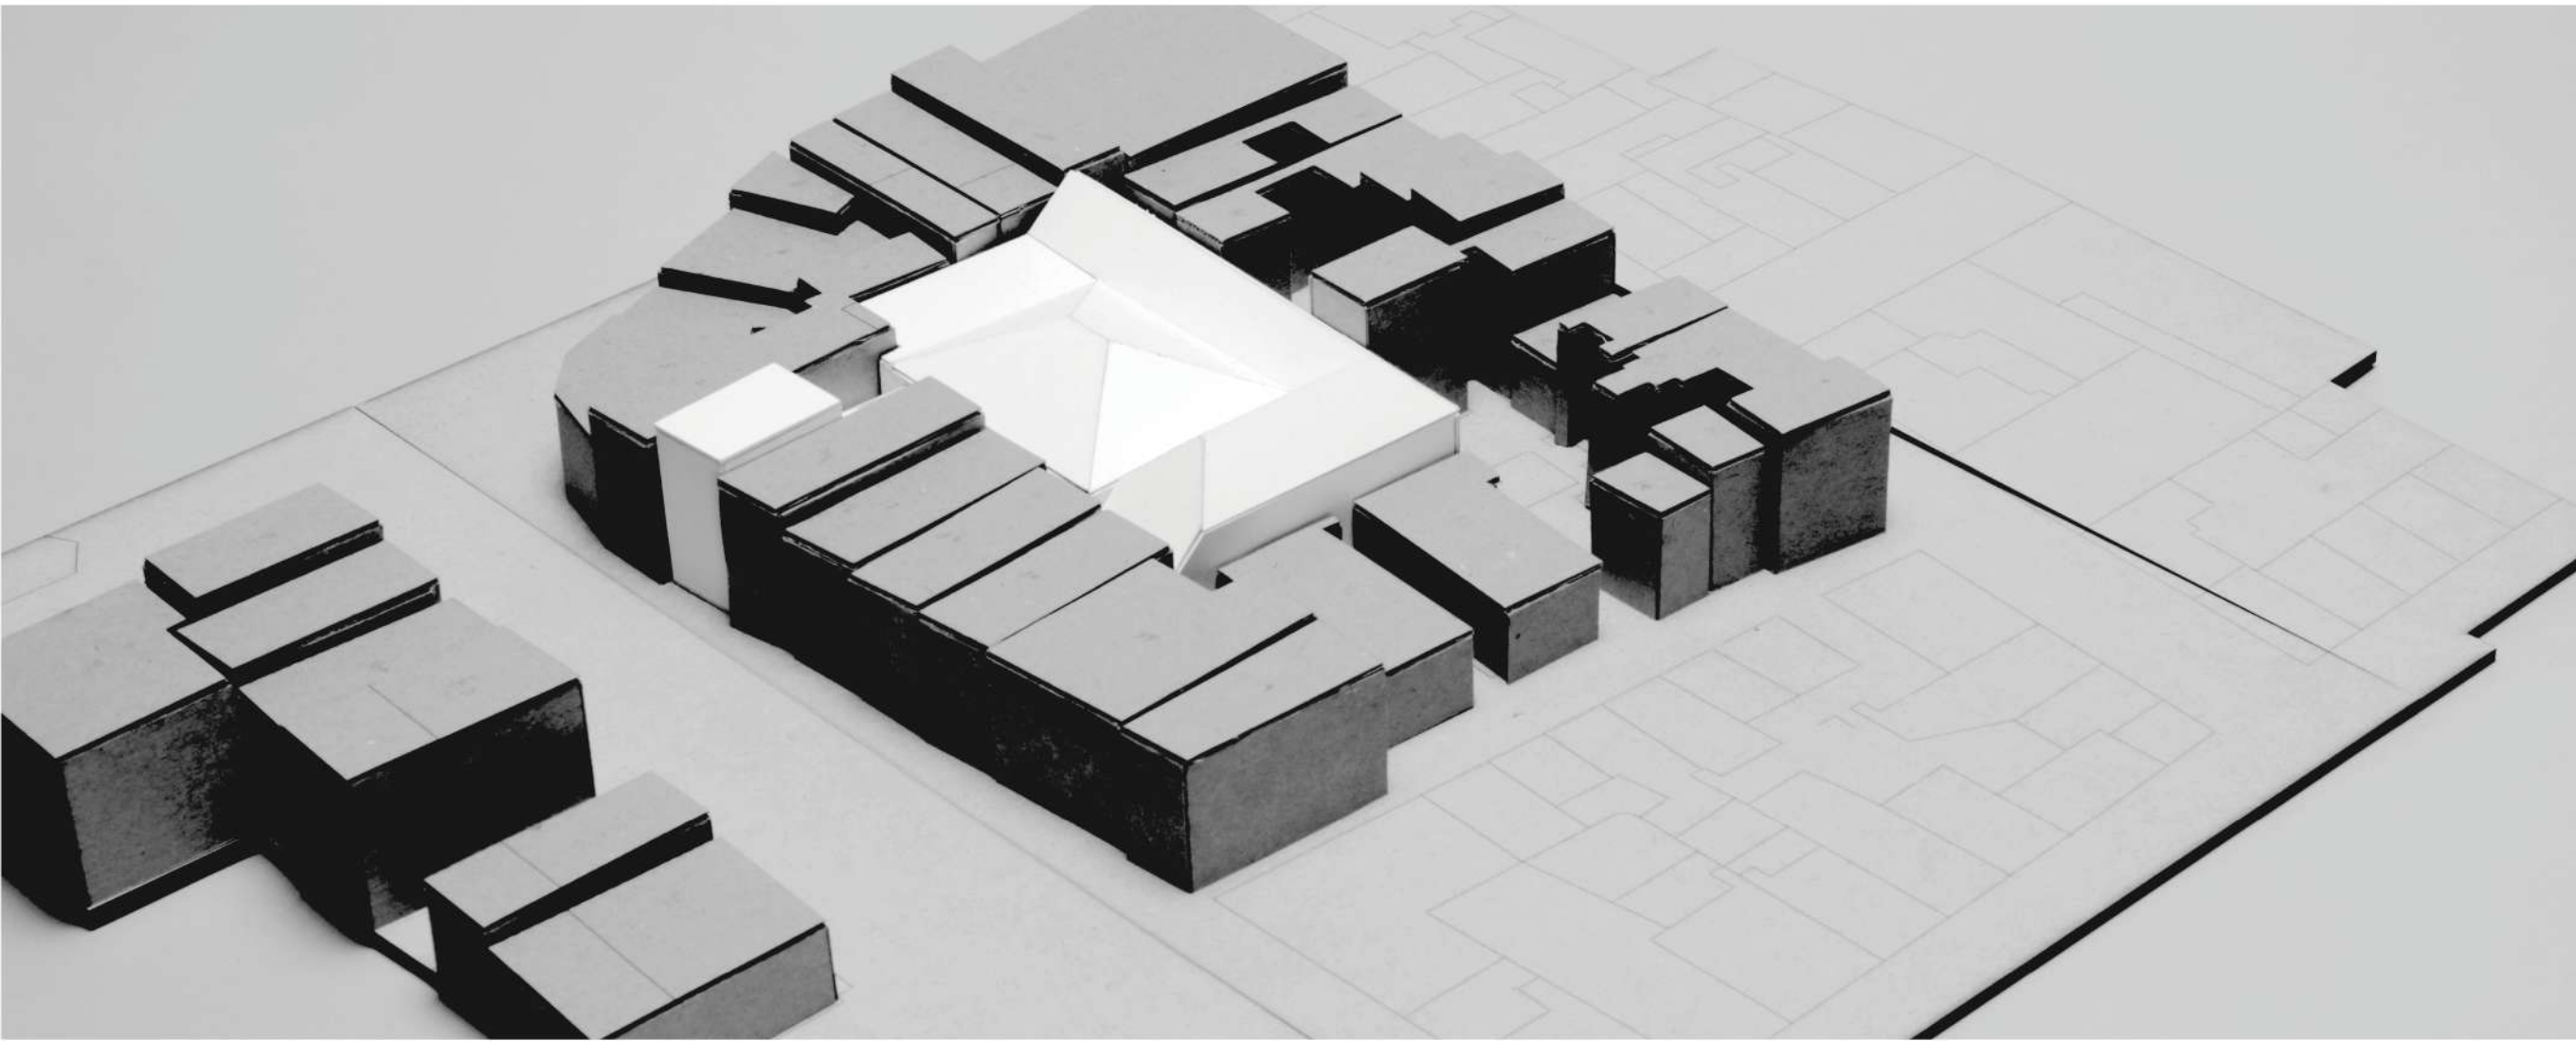

I visited a pub in London called Brickfields and I studied it as a reference of pub design. I was interested in the front panel of the bar table which has London Stock Brick frog pattern.

Spitalfields was historically one of the poorest, most overcrowded and most crime-ridden districts in London: a parliamentary report of 1838 described this area as harbouring "an extremely immoral population; women of the lowest character, receivers of stolen goods, thieves and the most atrocious offenders".

Plinth stretcher

Plinth internal return - long

Brickfields

London bricks have the distinctive 'frog' feature making them easier to cut and handle. All London bricks are manufactured to comply with Specification For Clay Masonry Units' to a size of 215mm x 102.5mm x 65mm. Certain bricks are also available in 73mm.

Kilns

Hoffmann kilns

Tunnel Kiln

Bottle Kiln

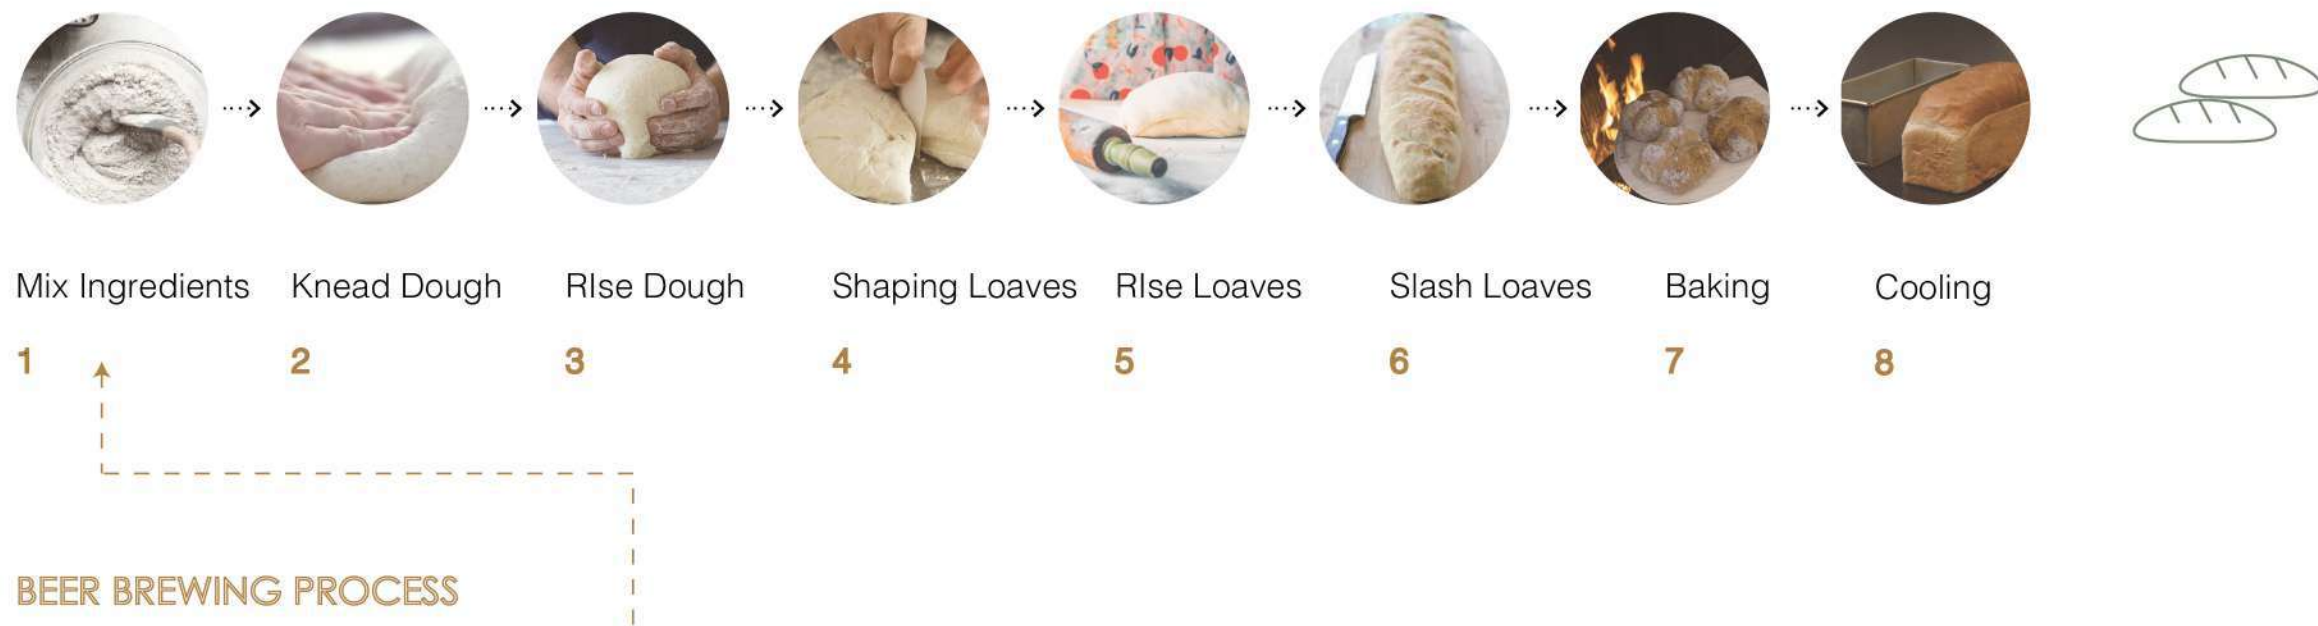

Chimney Bull's Trench Kiln

Clamp Kiln

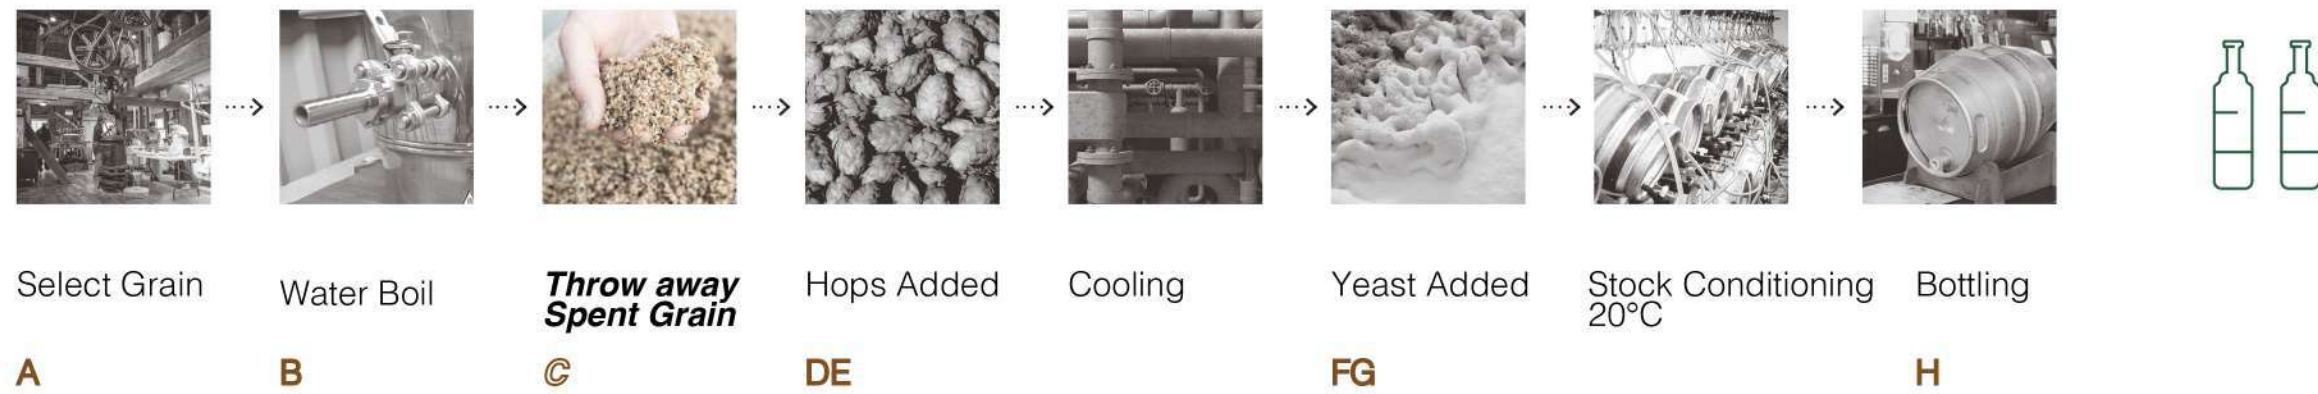

Then I started analysing Bricks, Brick works, Brick types, Bonds, Kilns ect.

I found hundred years ago, people built brick kilns just on the construction site. So the bricks are made by the clay from where the building stood.

BREAD MAKING PROCESS

BEER BREWING PROCESS

I analyzed beer brewing process. After boiling, spent grain become to waste but they are perfect healthy material for making breads.

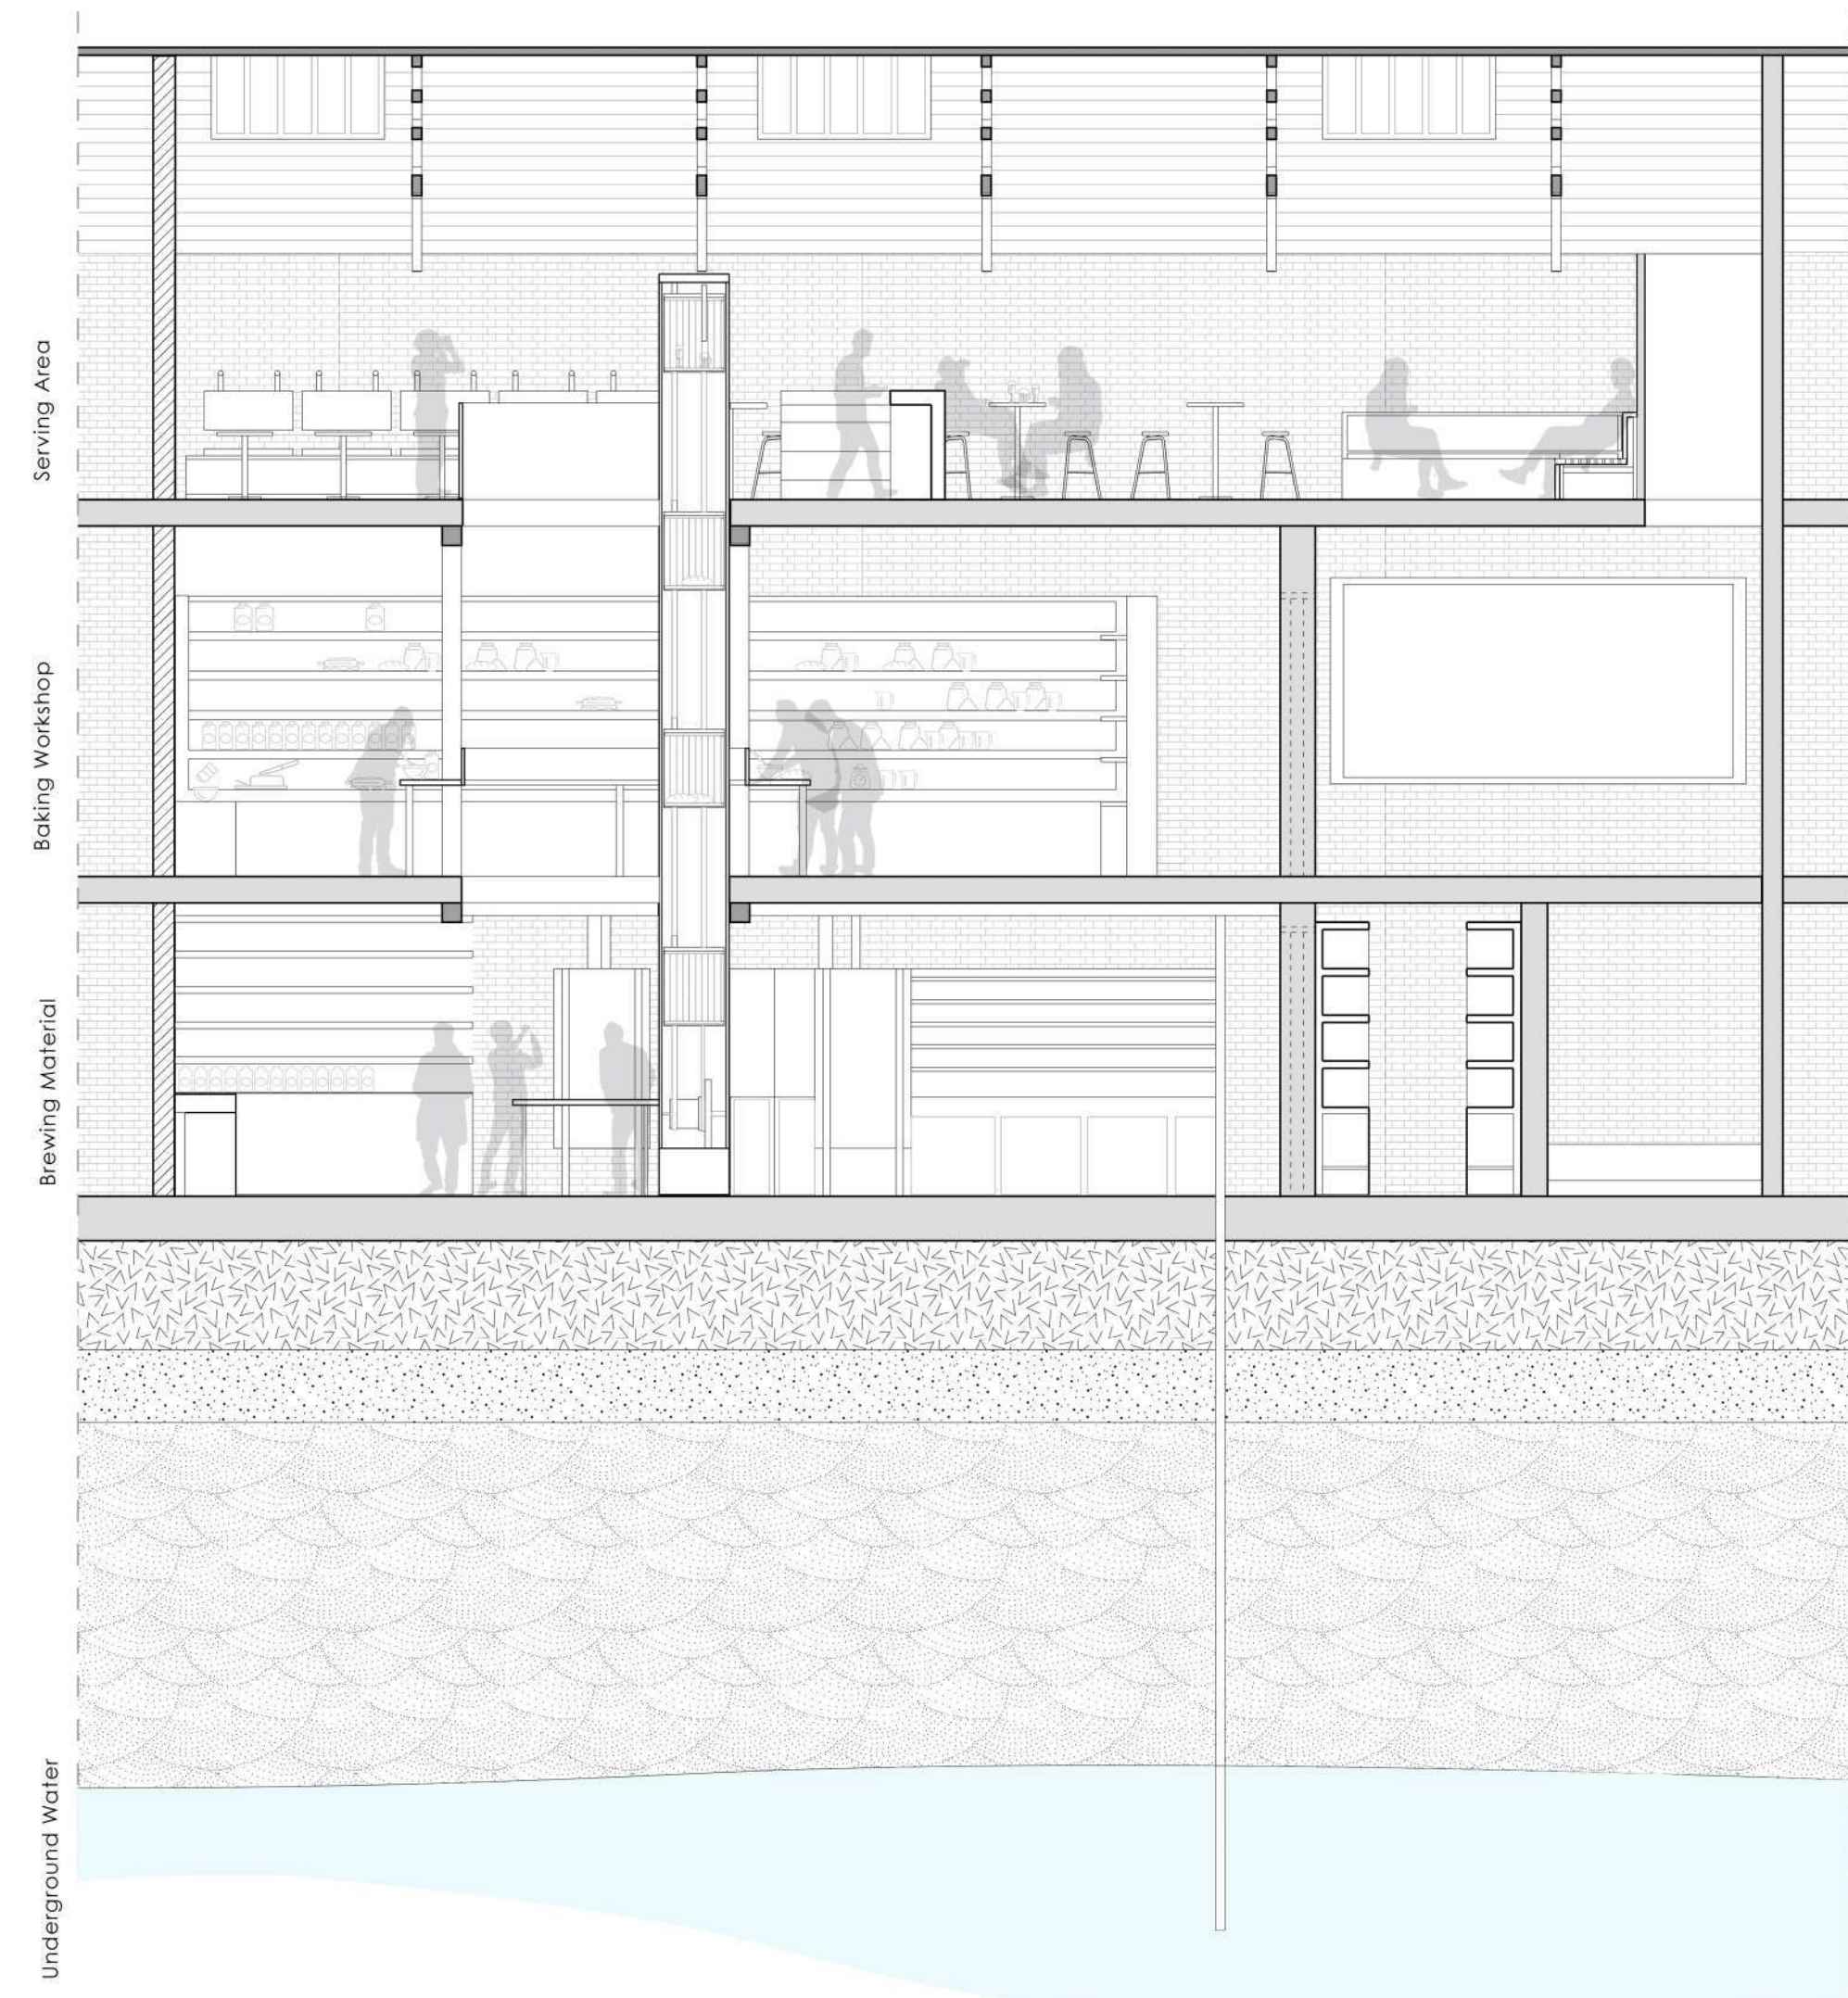

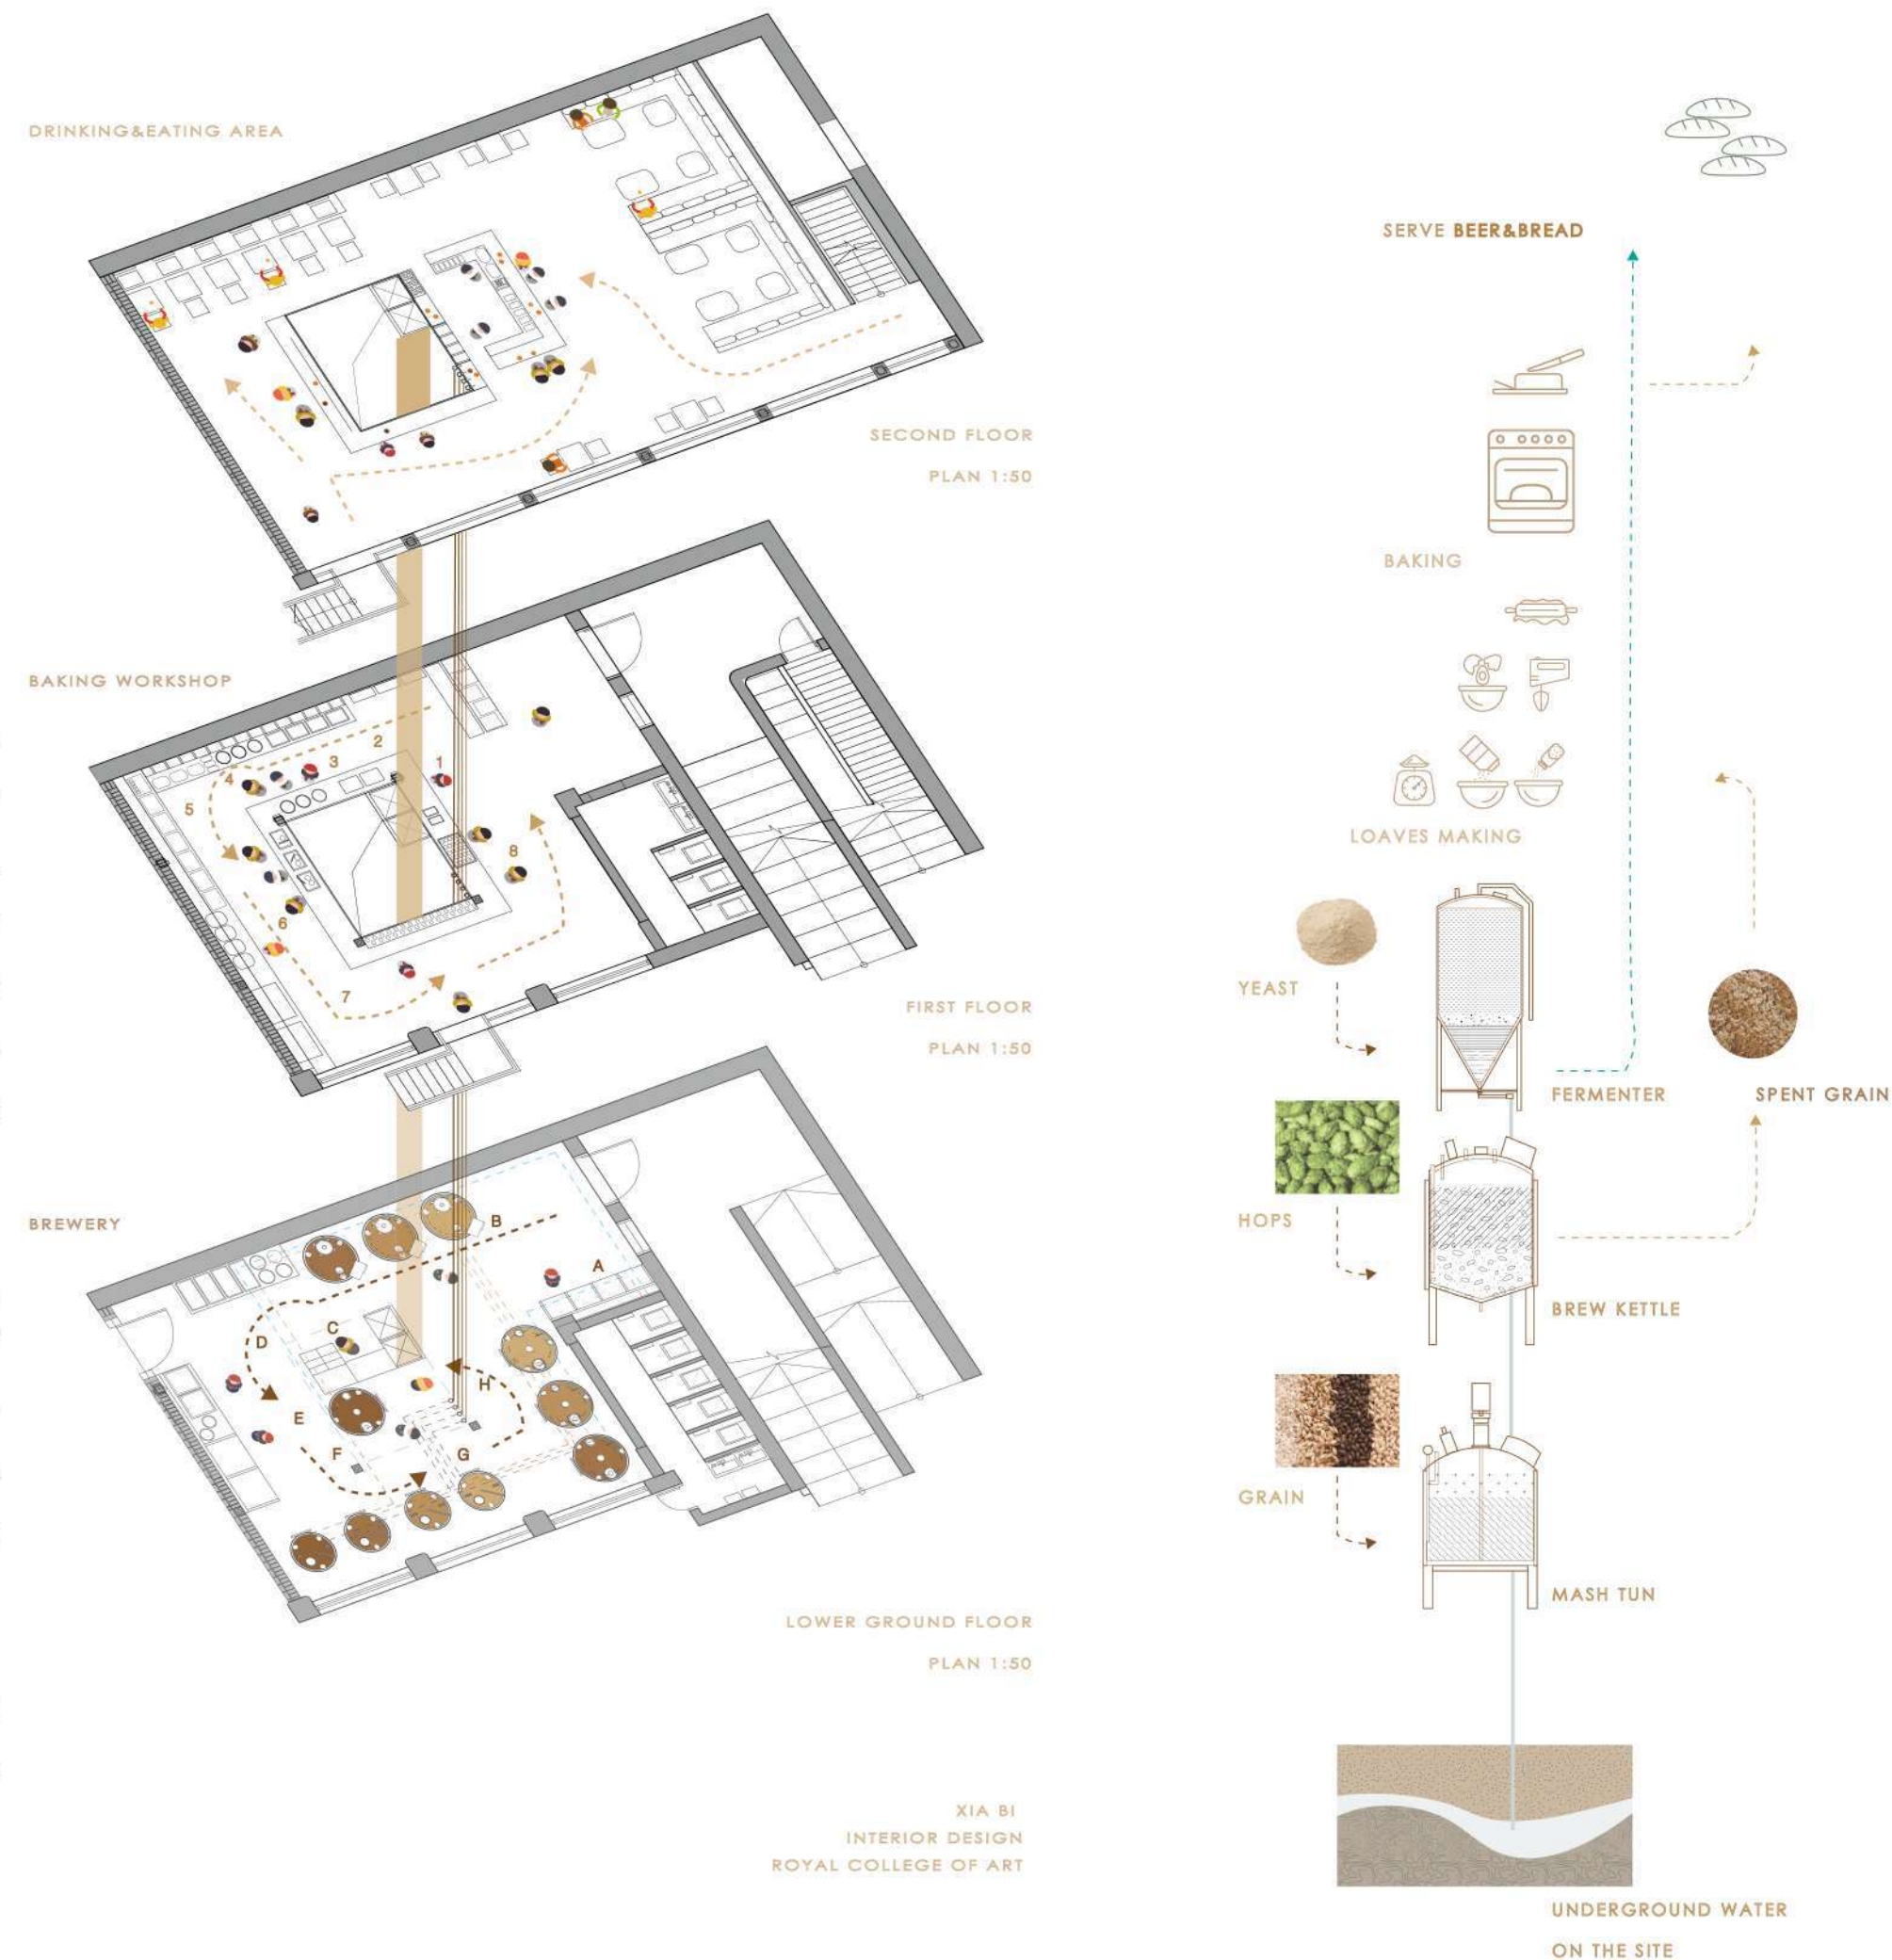

Video: <https://vimeo.com/325209989>

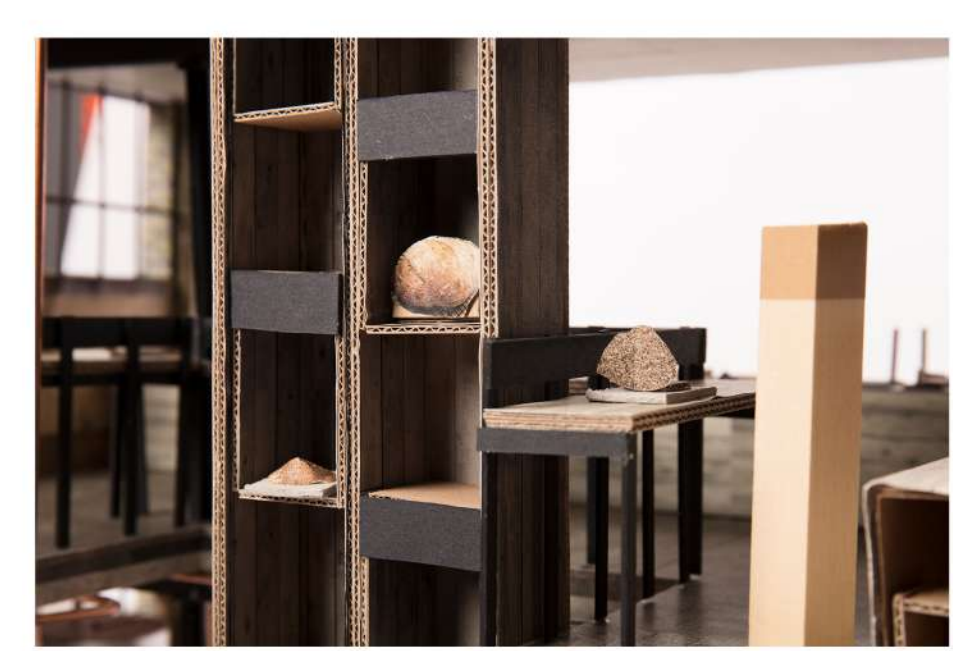

So here becomes my design, I put the brewery on the lower ground floor, there are four sets of brewing machines brewing different beers by using local underground water, people can see how them work. The beer will be pump up to the top floor for reserve. Beside the brew kettles is a paternoster lift, different spent grains lift up to the first floor.

There is a baking workshop on the first floor, you take the spent grain as an ingredient of breads, the circulation is just on the baking process. After baking, the breads will be send to the top floor, which have bars, seating area, standing area.

The voids will give people a good view through all the floors to see the making processes. And also give the furniture materials.

3 White Lie

Individual Work
8 Weeks
Royal College of Art

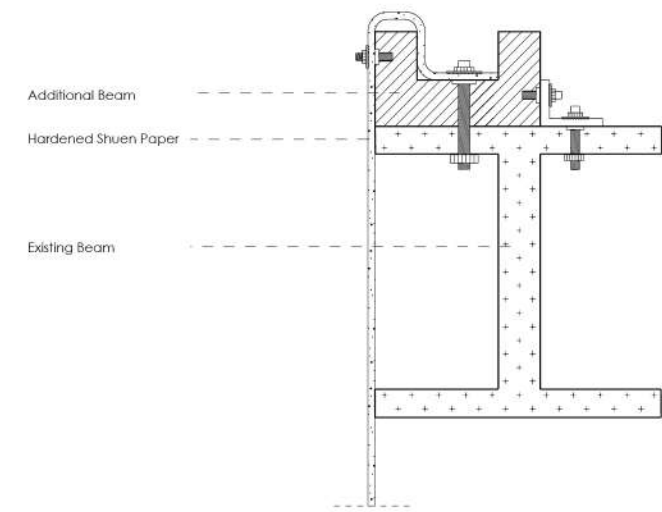

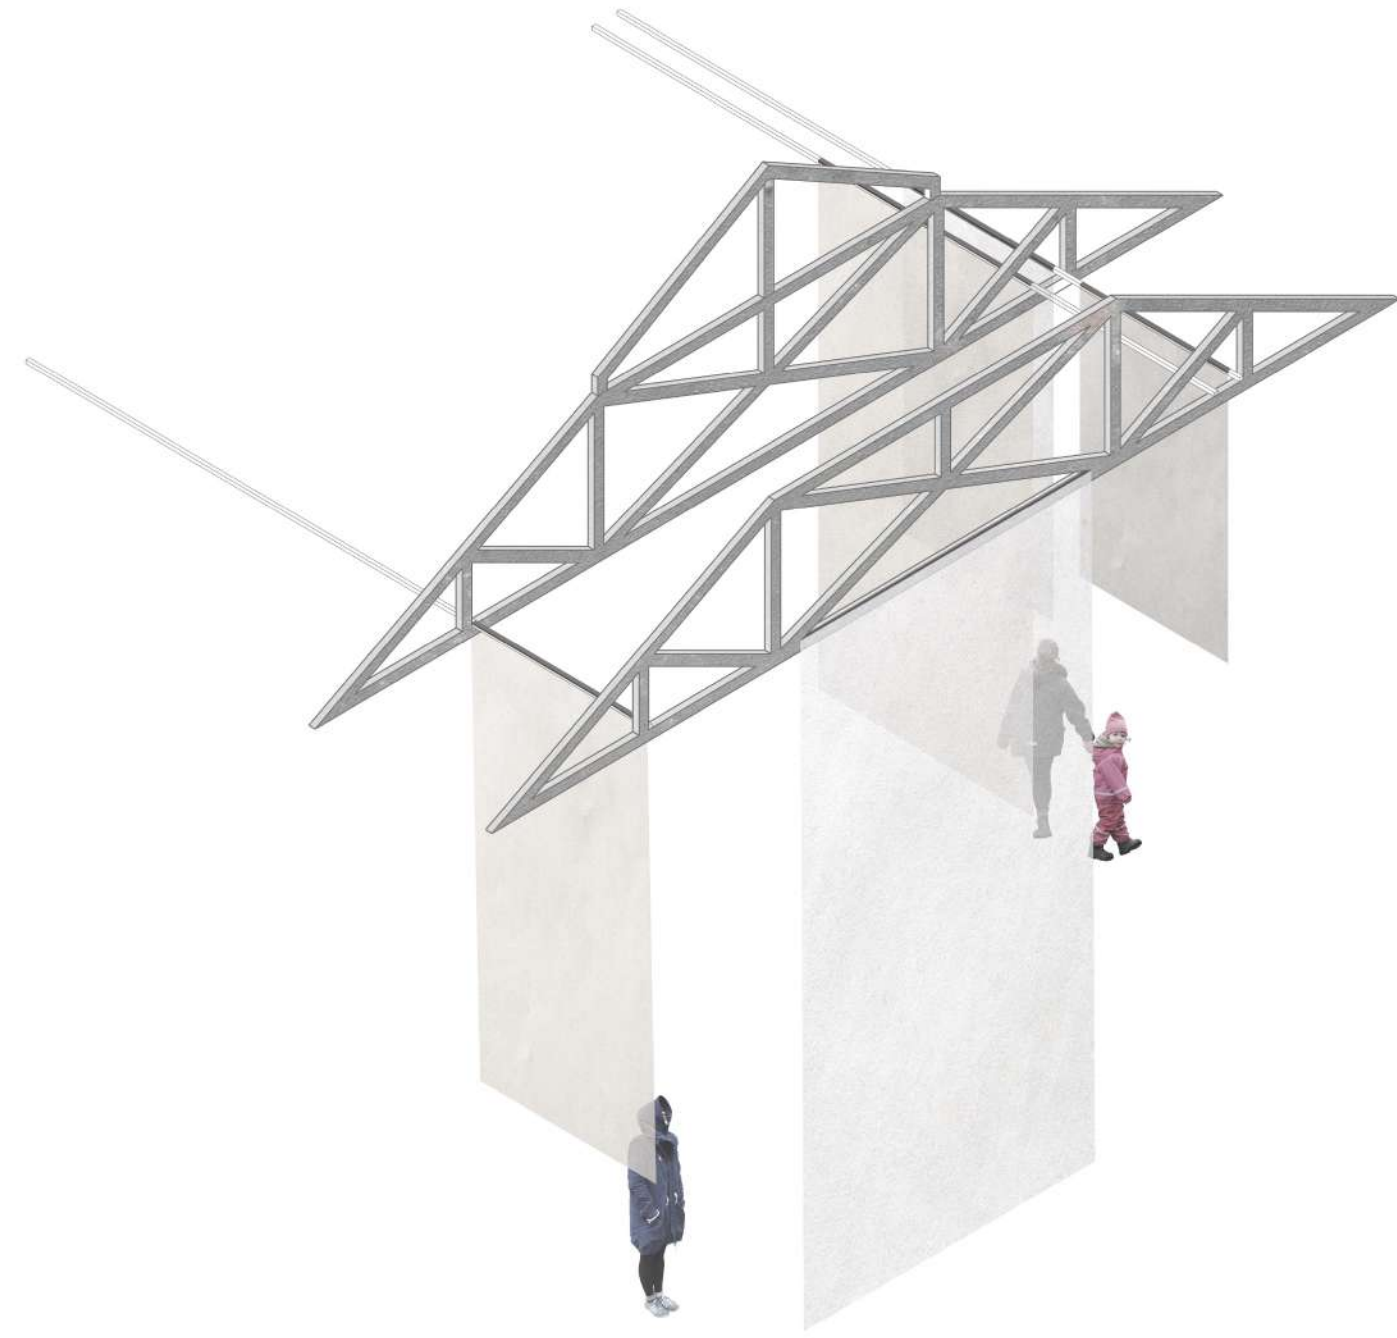

This is a entrance and foyer design of a Christmas-themed museum. I developed the concept from my childhood thoughts about Christmas: I was not told until high school that Christmas was a lie. Therefore, I believe that the "White Lie" of Christmas should be protected and preserved by everyone. This idea prompted me to transform the project address into a question for the children. "How did Santa Claus deliver so many gifts to so many children's homes in one night?" "It must be that he has a pipeline!" This museum has become a playground for children to believe in this Christmas lie.

4 Feel Good Inc.

Individual Work

6 Weeks

Royal College of Art

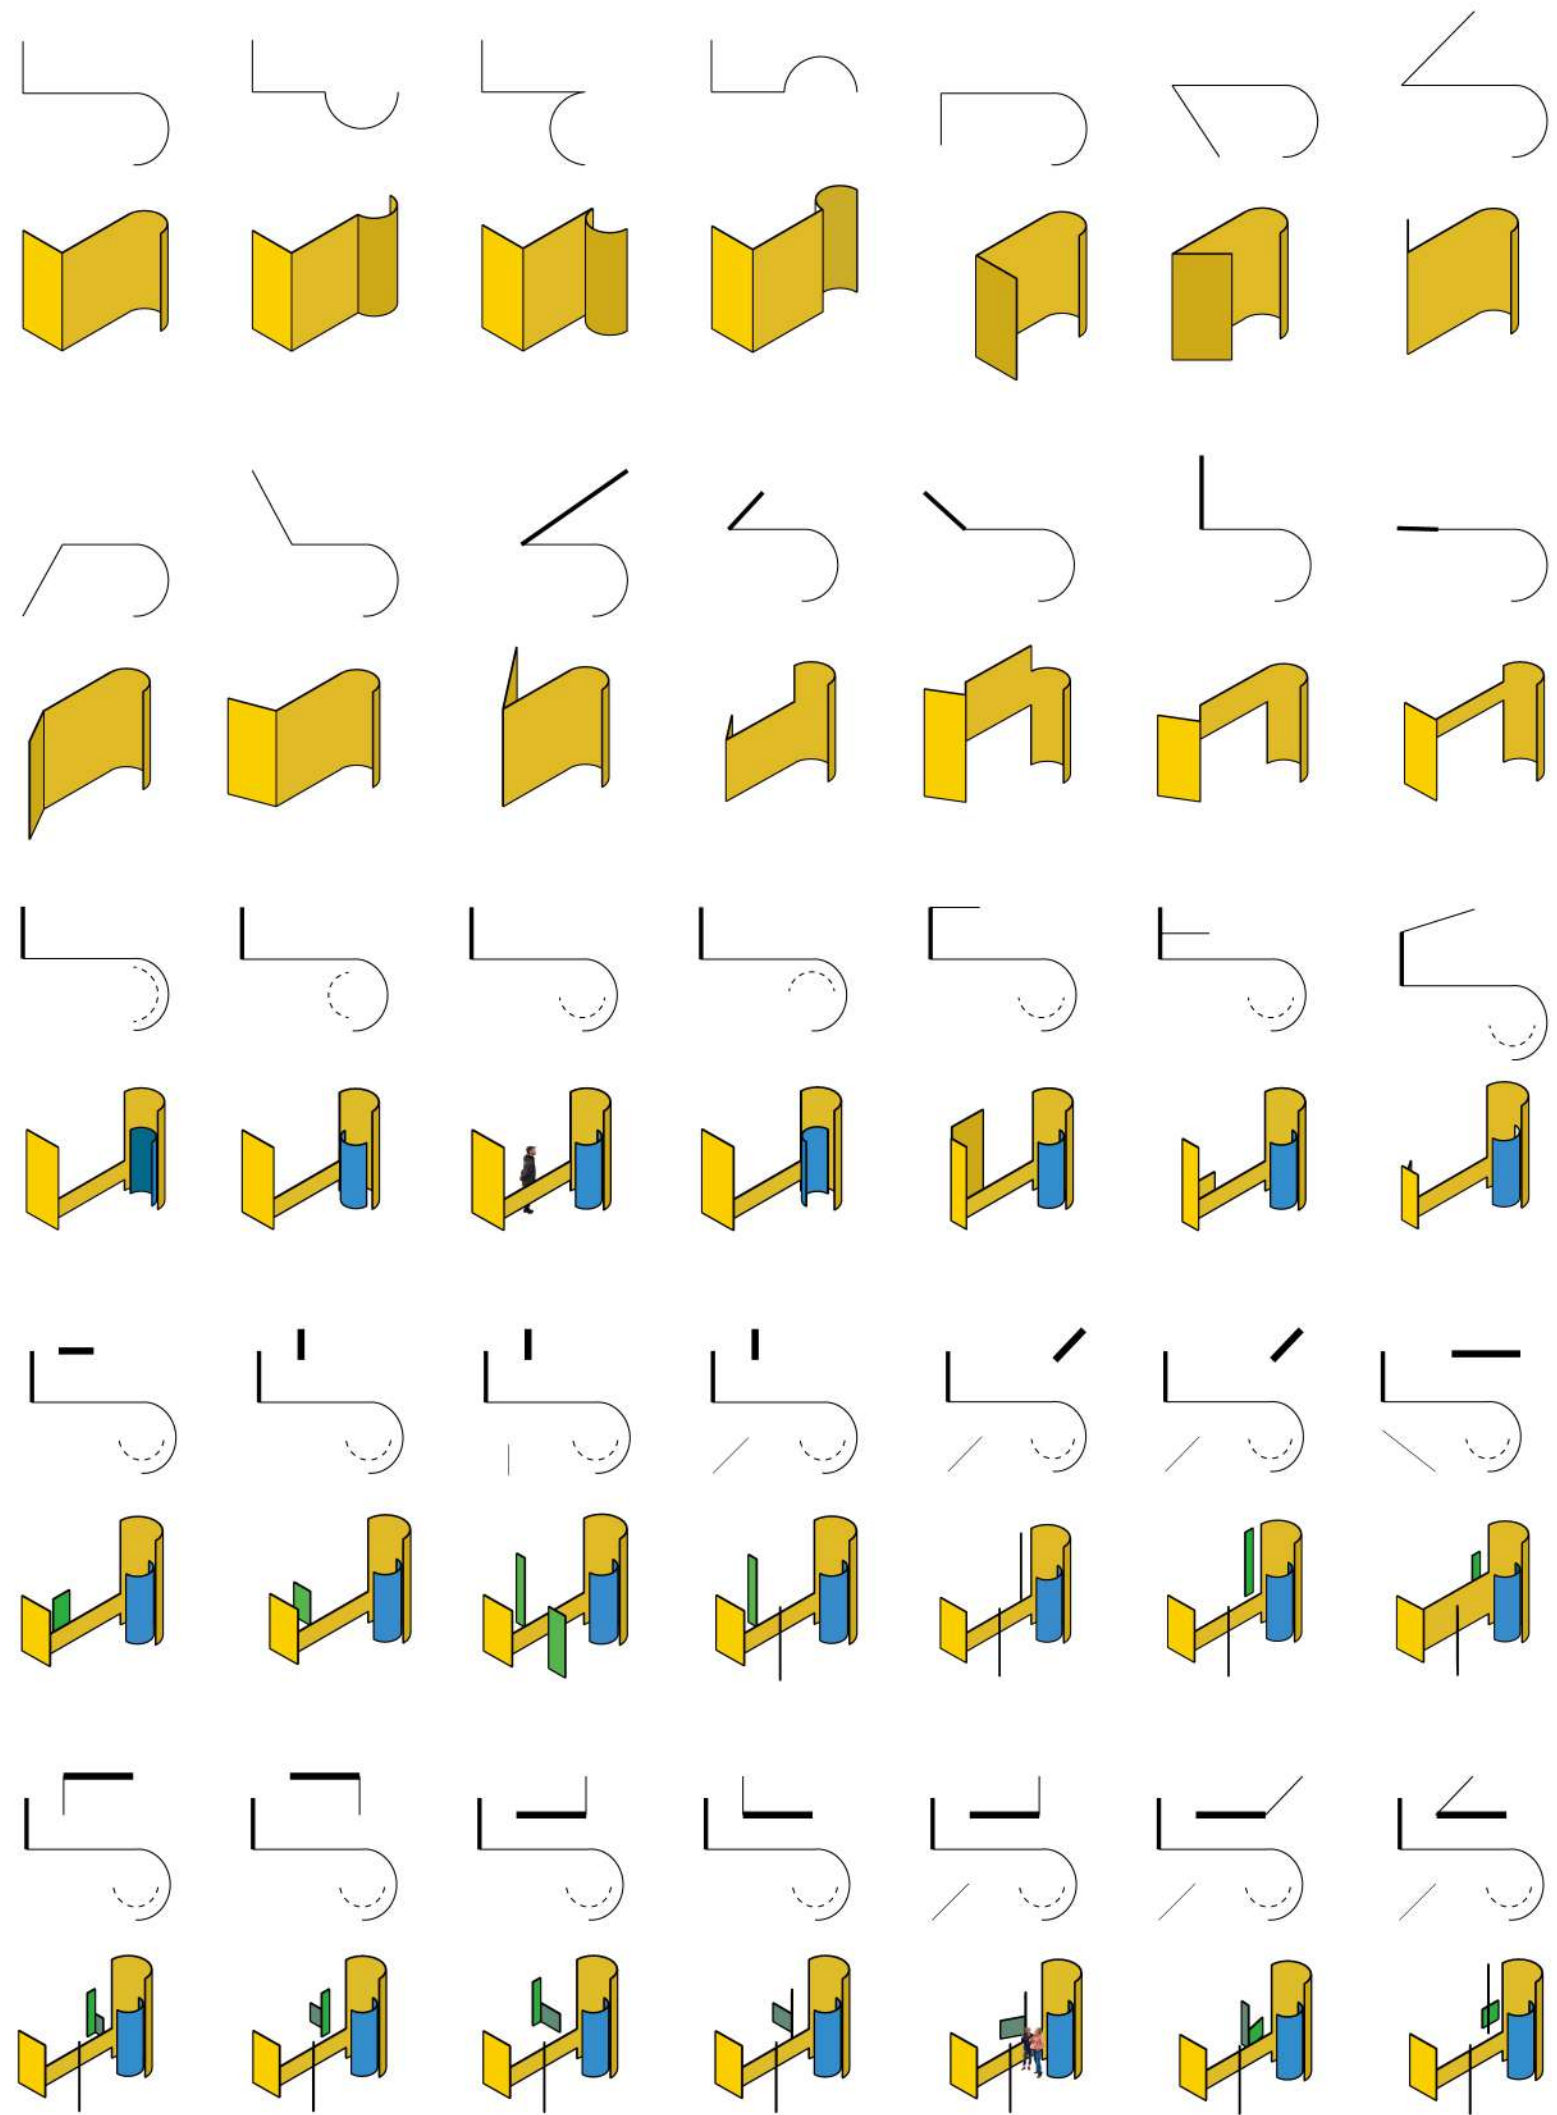

This is a theremin shop called "Feel Good Inc." designed for Gorillaz. Gorillaz is a virtual band started in London from late 1900s, The story in the video takes place in a tower, 2D wants to evoke people against evil forces. So in the material research, I chose the cold steel mesh. I used the deformation of the mesh to realize the fixings of the pipe without welding, which represents the attitude of 2D against evil forces. I turned the shape of the tower into the shelf. There is a megaphone hanging in the middle, and photos and comic books are displayed on the other end. I use Multi-projection which can make people's shadows have many colors, thus realizing the interaction between people and space. Let consumers feel that everyone could become gorillazs characters.

9. Would you like to share your cooking skills with other people? [单选题]

选项	小计	比例
no	2	3.23%
If they want, I'd like to try	24	38.71%
Yes	36	58.06%
Total	62	

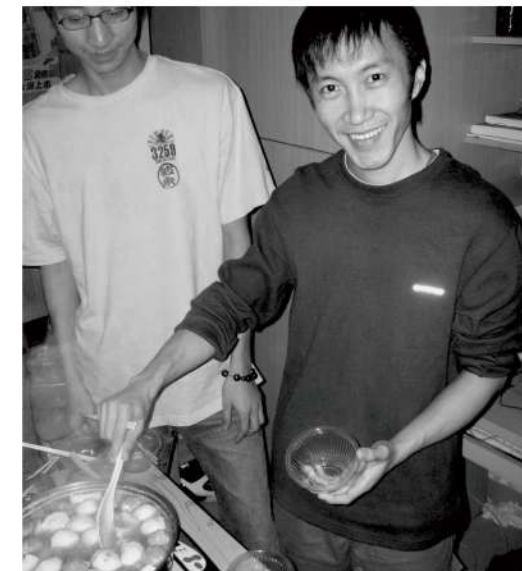

Cross-analysis of web survey results

Would you like to share your cooking skills with other people?

Selected Condition

School dormitory

Hutong alley

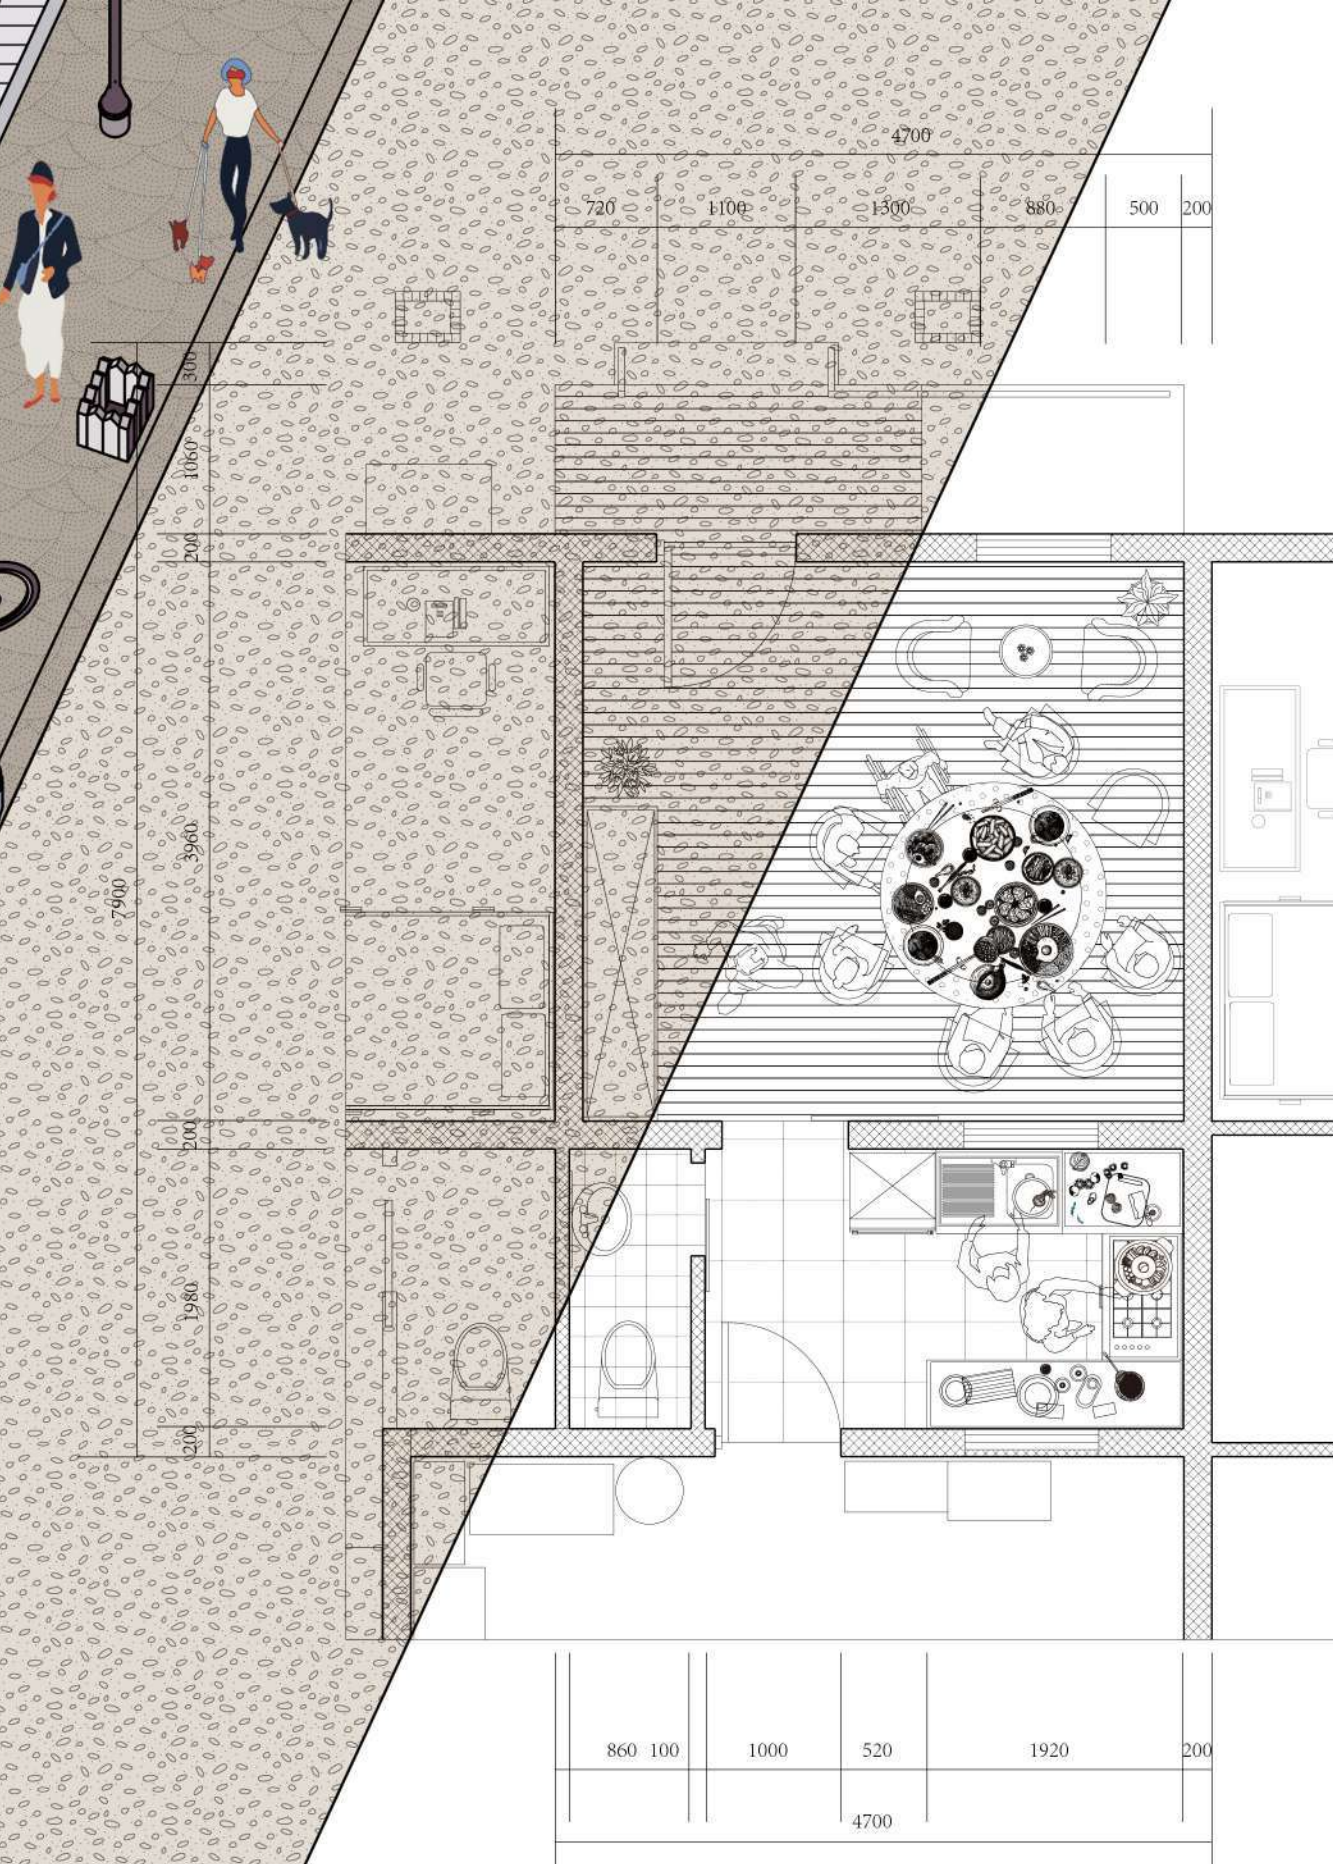

Hospital canteen

According to the questionnaire, following conclusions can be withdrawn:

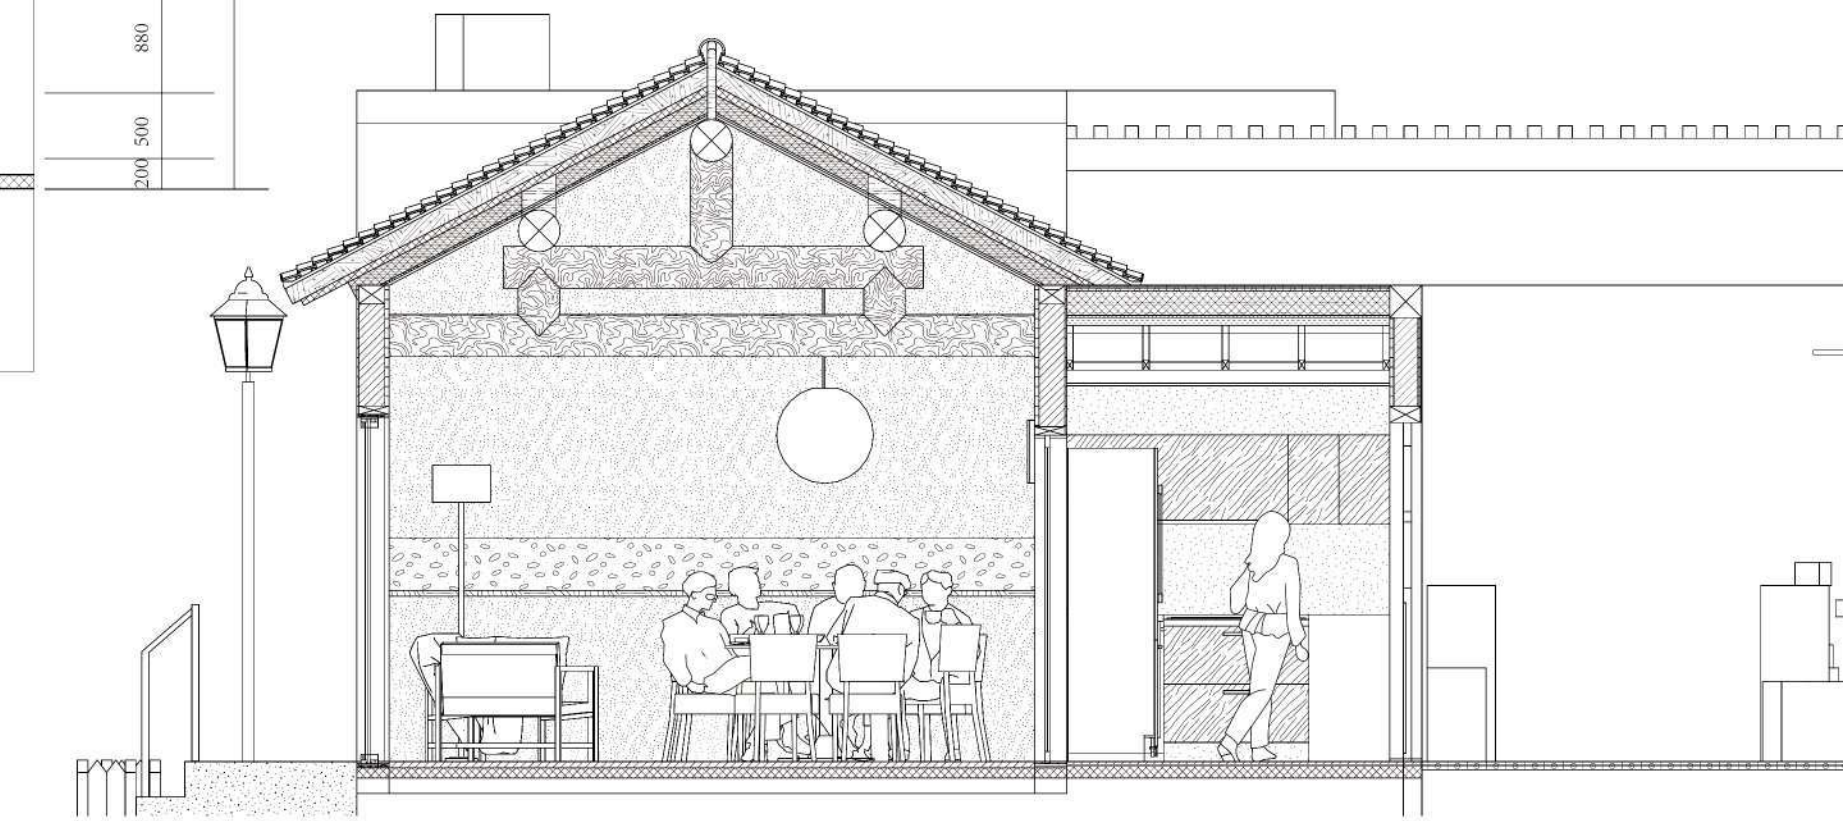

- Students and elderly tend to enjoy the time cooking and eating with friends.
- For those who possess kitchens in their homes, nearly half of them never cook or only cook once/twice per week.
- Patient relatives worry about the safety of hospital-provided food and take-away food.
- If there are prepared safe food and tools, most people would like to cook.
- Most people are willingly to share their cooking skills for others.

Based on the above conclusions, I choose Hutong residences, schools, hospital canteens as the project bases and add sharing kitchen program.

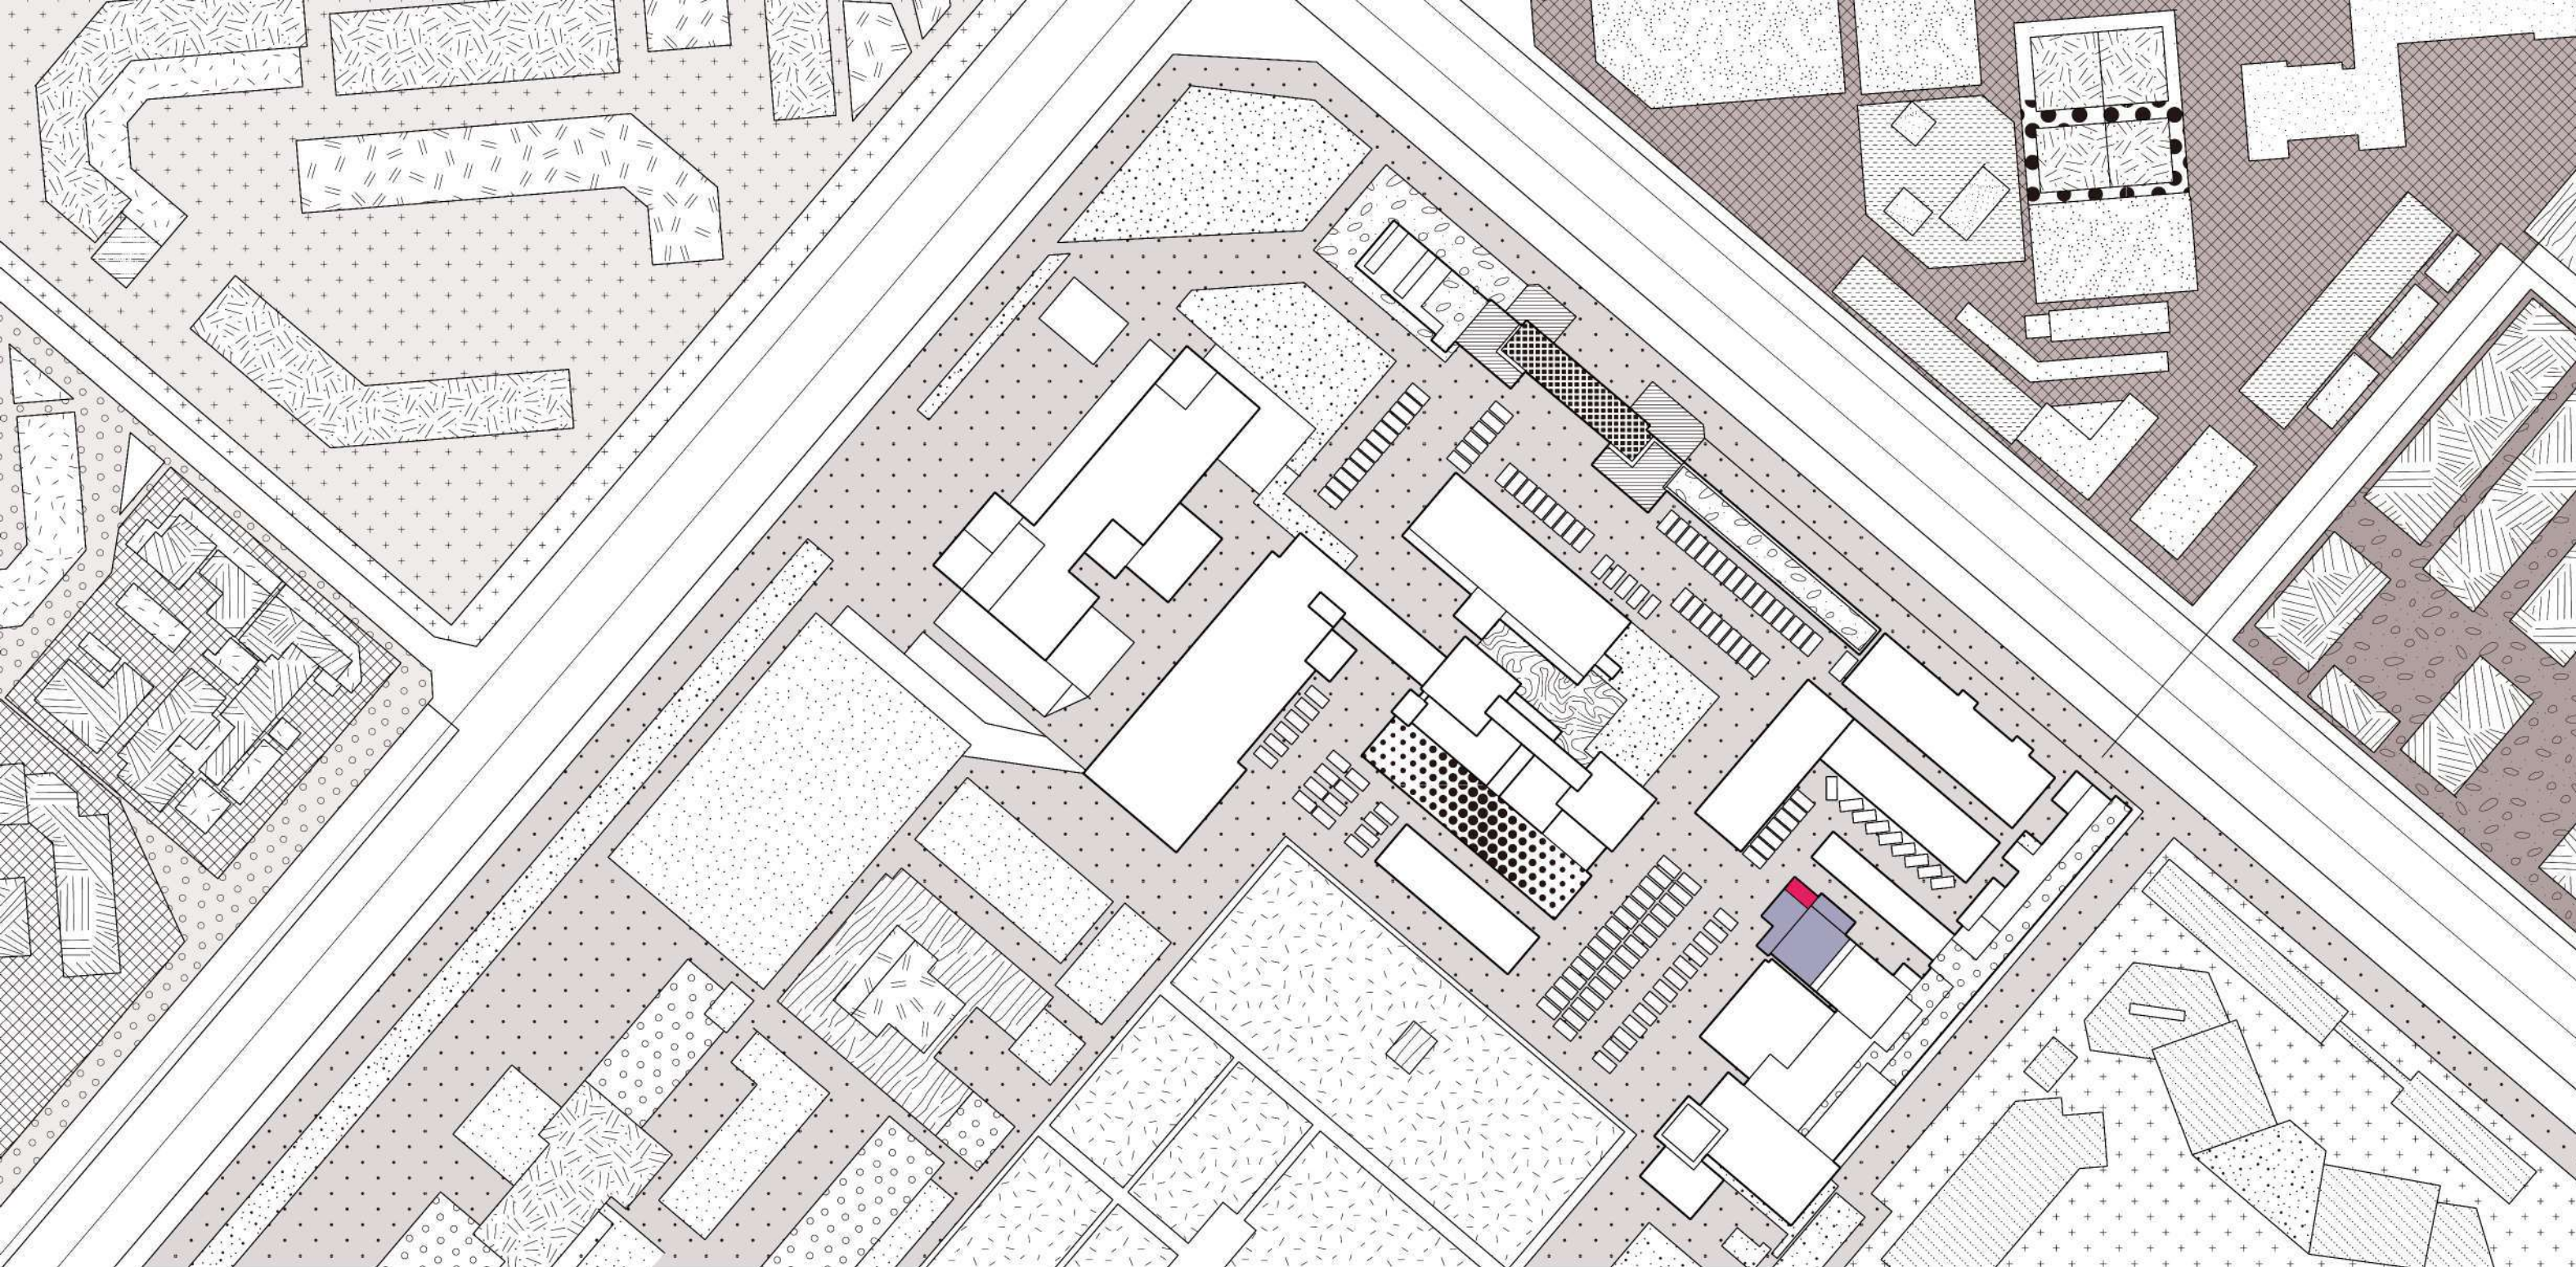

Status Quo

The Maoer Hutong In Dongcheng area is super crowded. 20 people live in a small yard and I try to reform a paper-cut shop alongside the street. I try to make a whole shop for the use of sharing kitchen project to let residents in the Hutong enjoy big kitchen and big canteen. There are large windows on the walls of canteen and kitchen and all neighboring residents could appoint to cook and eat together.

▲ Cross-section

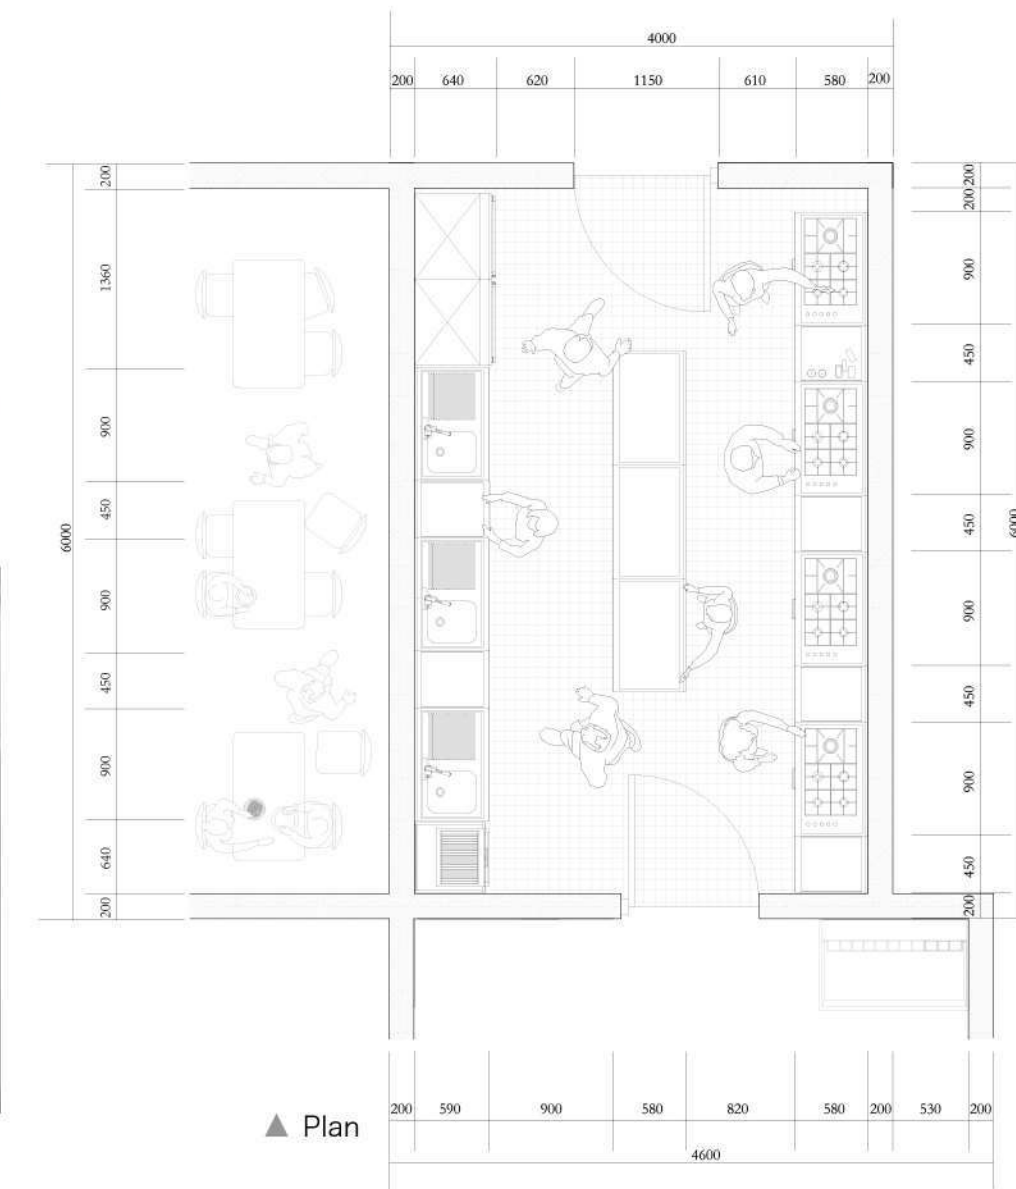

▲ Site

Wangjing Hospital in Chaoyang District, Beijing is a public hospital providing about 700 hospital beds. Hospitalized patients eat take-overs, or fast-food bought at a hospital restaurant from their relatives everyday.

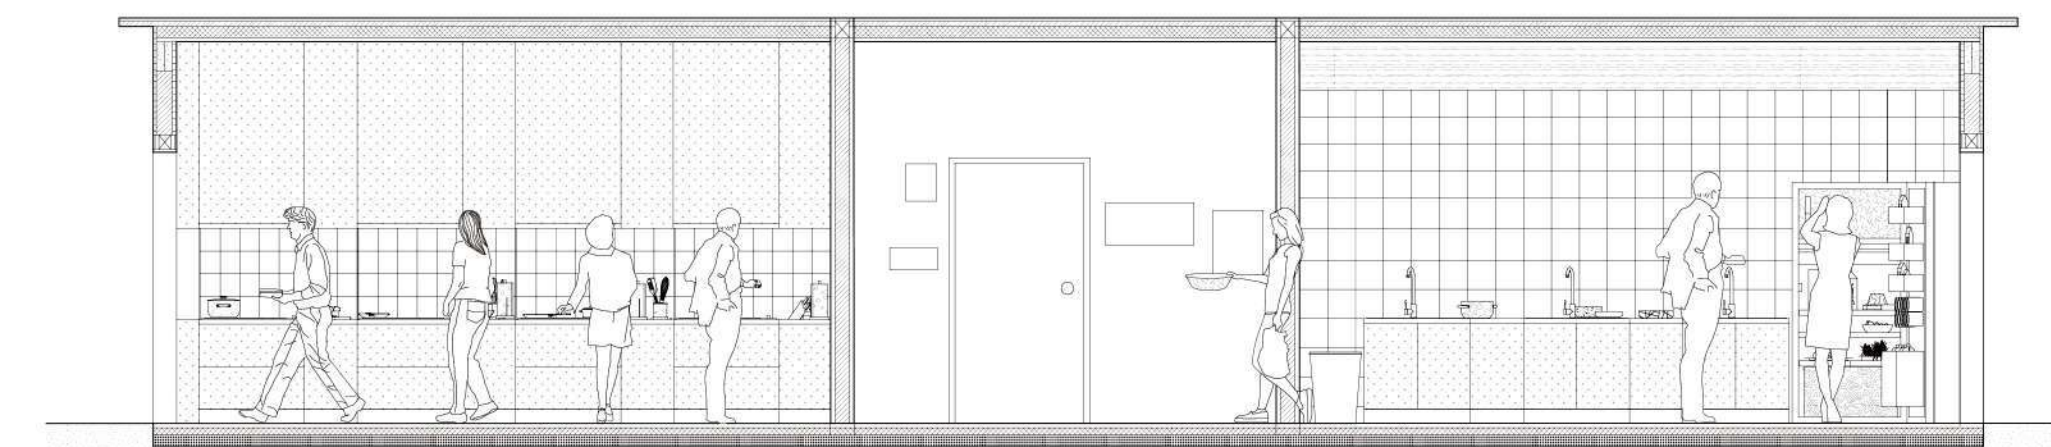

I add my sharing kitchen plan in the storeroom of the hospital canteen for the convenience of those patient relatives who want to cook self-made fresh and nutritive food for their beloved family members. This kitchen could accommodate four people to cook. Taking out fresh raw food material, doing cleaning job, cooking and taking away; such series of functions are anticlockwise arranged in order. It could save cooking time and make delicious food.

▲ Plan

In order to save time, the course of action in the hospital's kitchen was designed to be fluid

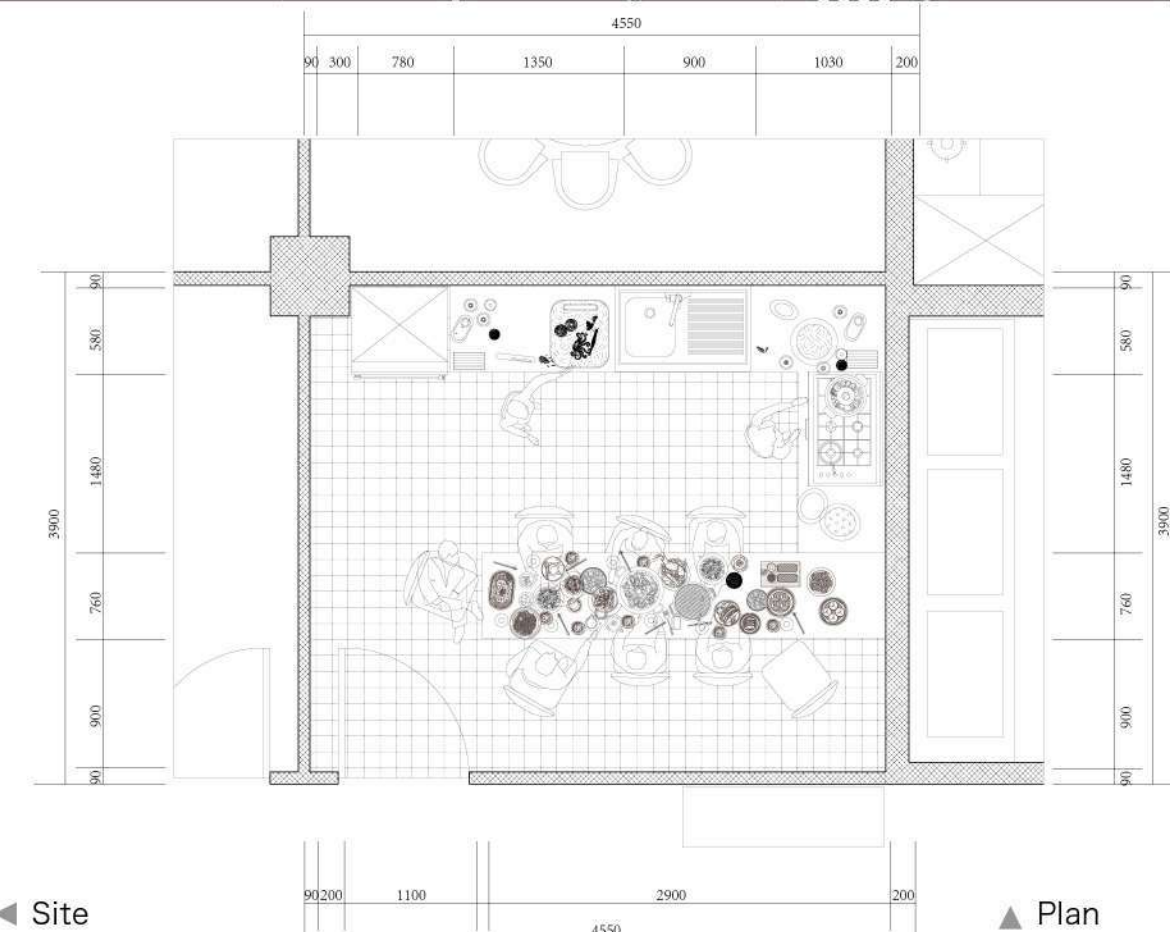

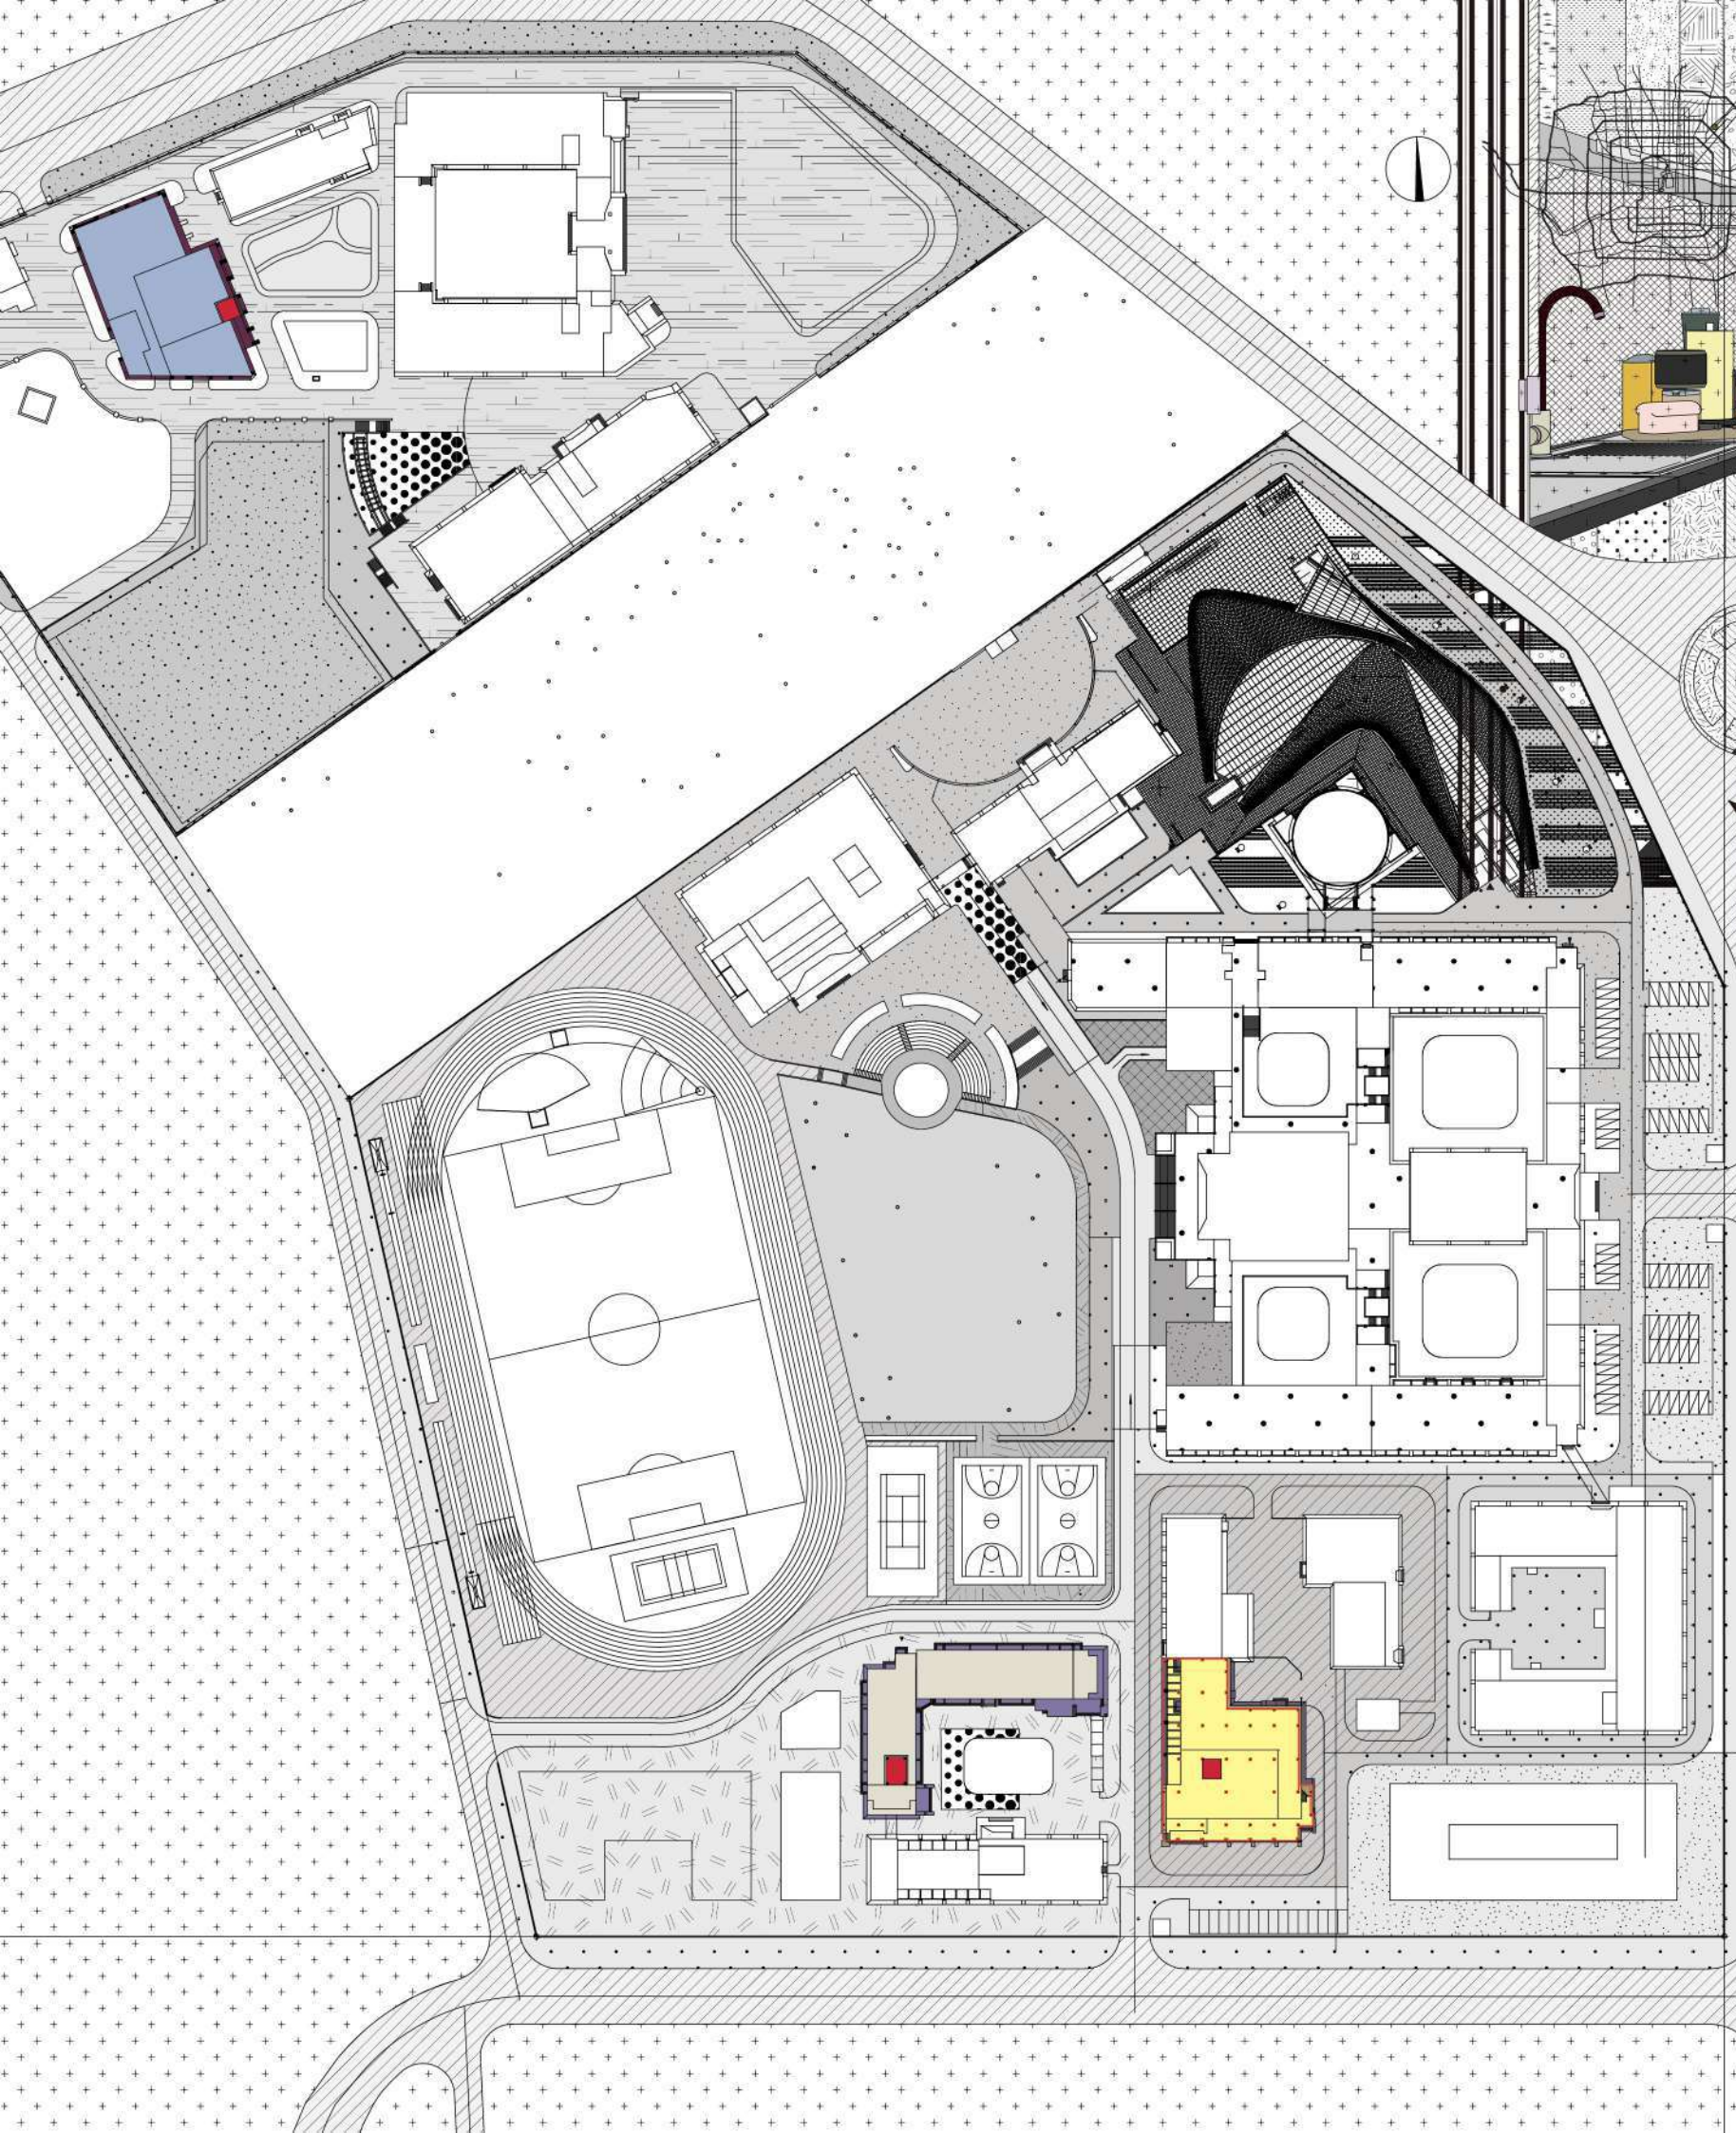

▲ Pack and take away

▲ Quick cook

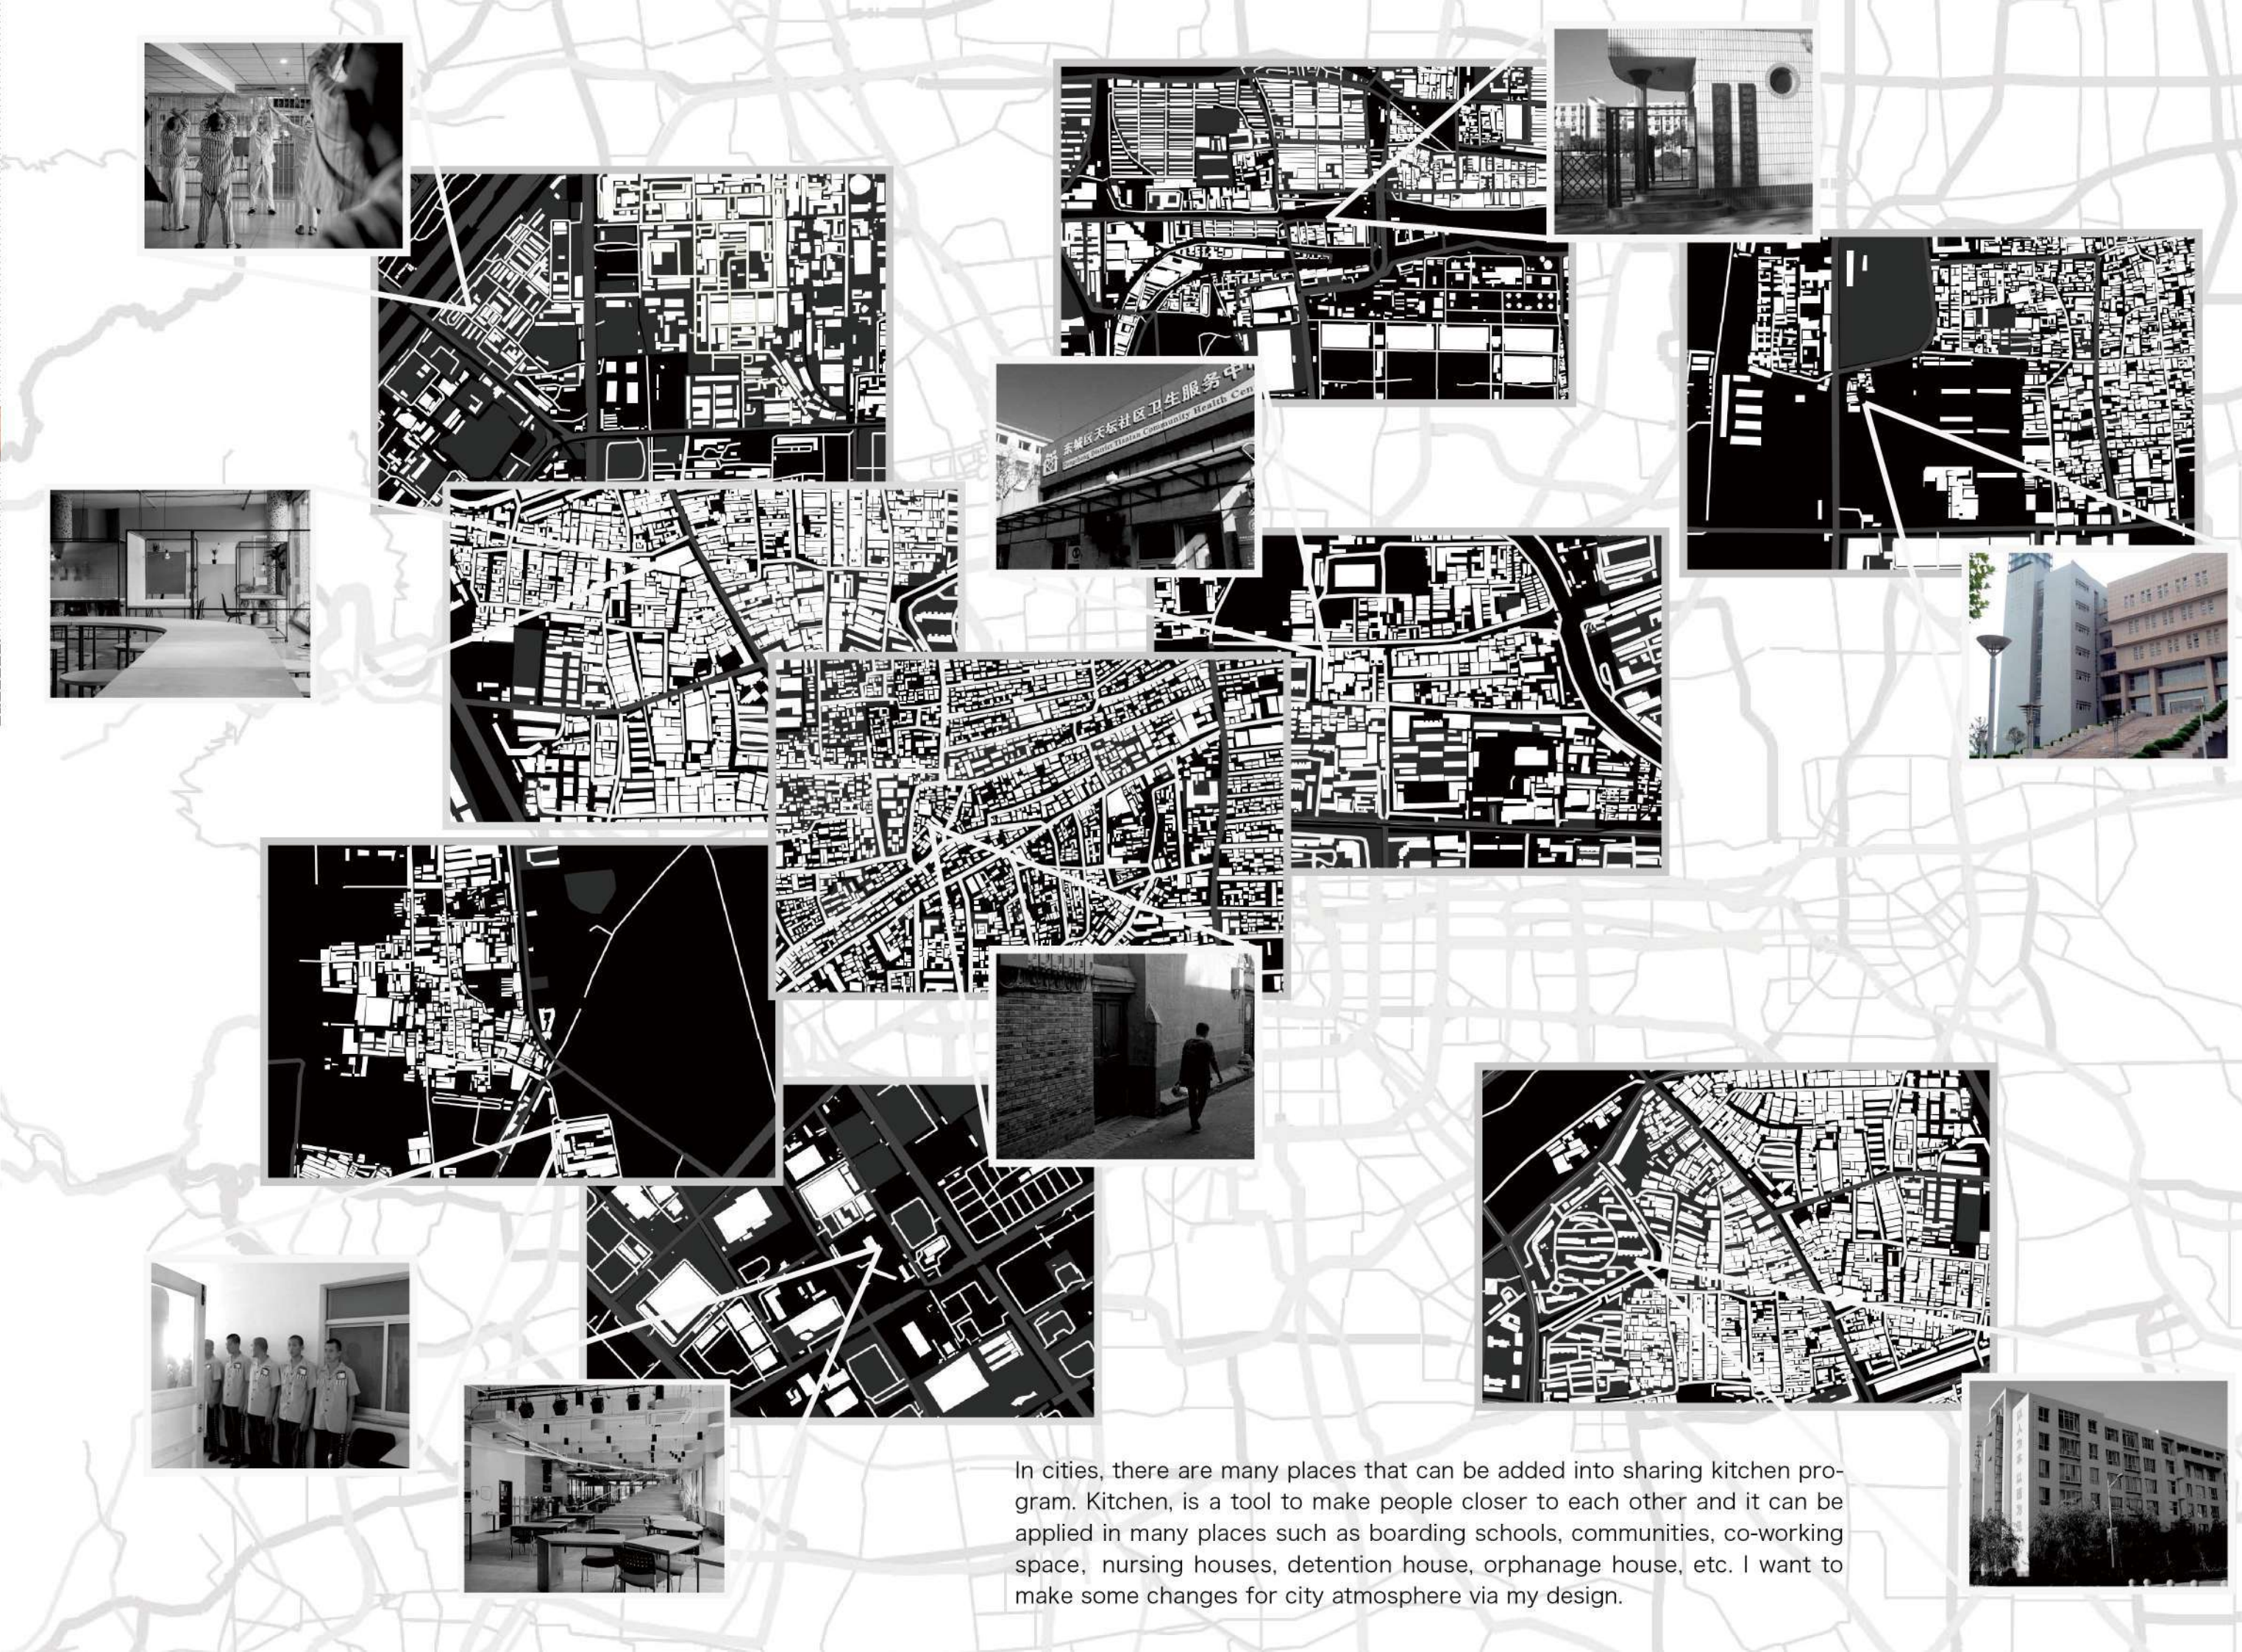

▲ Wash ingredients

▲ Take ingredients from refrigerator

I put school' s sharing kitchen in a room at CAFA in the third floor, where the canteen bases. Bar counter and hearth are placed together and such arrangement breaks the barrier between eating and placing and provides students with the space to cook and dine at the same time. This room is near the canteen kitchen and students could use the existing food in the kitchen.

In cities, there are many places that can be added into sharing kitchen program. Kitchen, is a tool to make people closer to each other and it can be applied in many places such as boarding schools, communities, co-working space, nursing houses, detention house, orphanage house, etc. I want to make some changes for city atmosphere via my design.

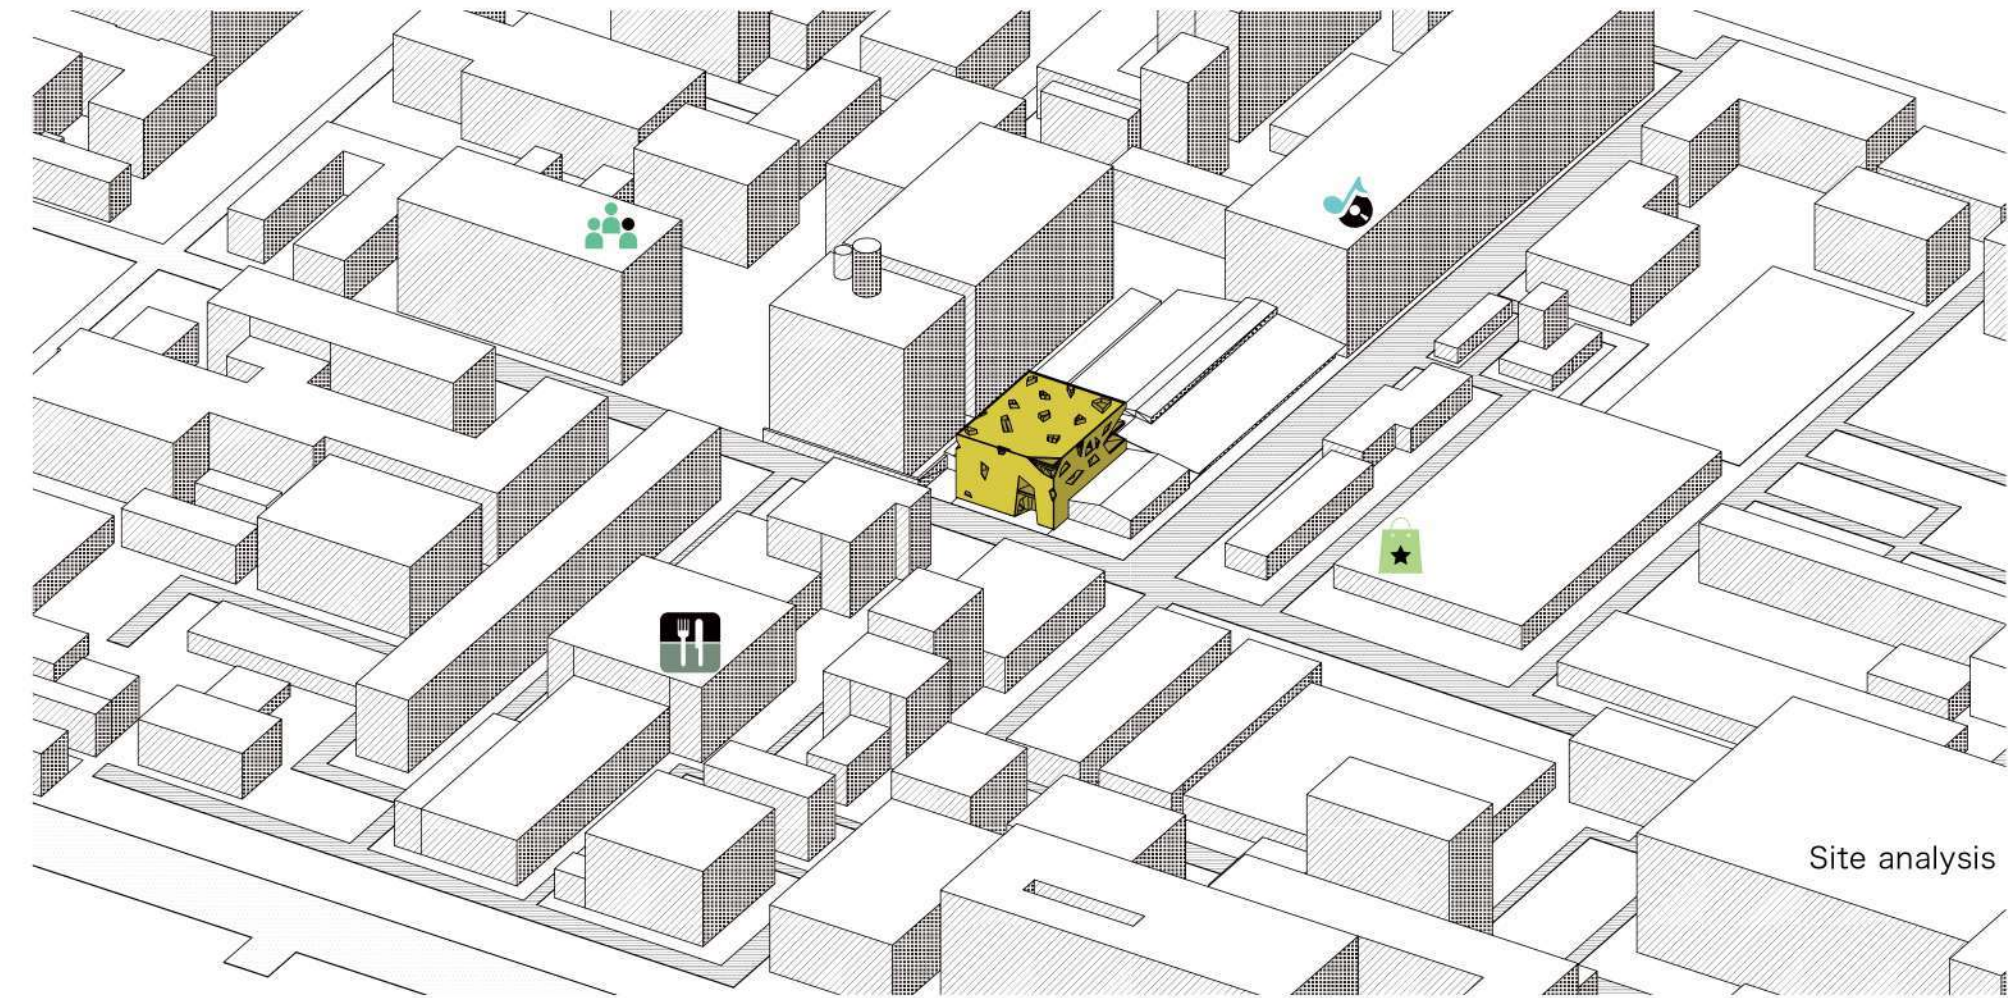

6 Stay Melo Exhibition

Individual Work
4 Weeks

This project is a memorial hall with sneaker theme and the main function is exhibition. This space is inspired by the career story of my favorite NBA star Carmelo Anthony. The architecture is located at the 798 art zone in Beijing, a swarming place of galleries. Along with the moving lines, I divide the space into three zones. I take the original pillar as the main design element and match it with exhibition installation and special graphic design to correspond with his three career phases.

▲ On-site photos

Site analysis

Gallery

Office

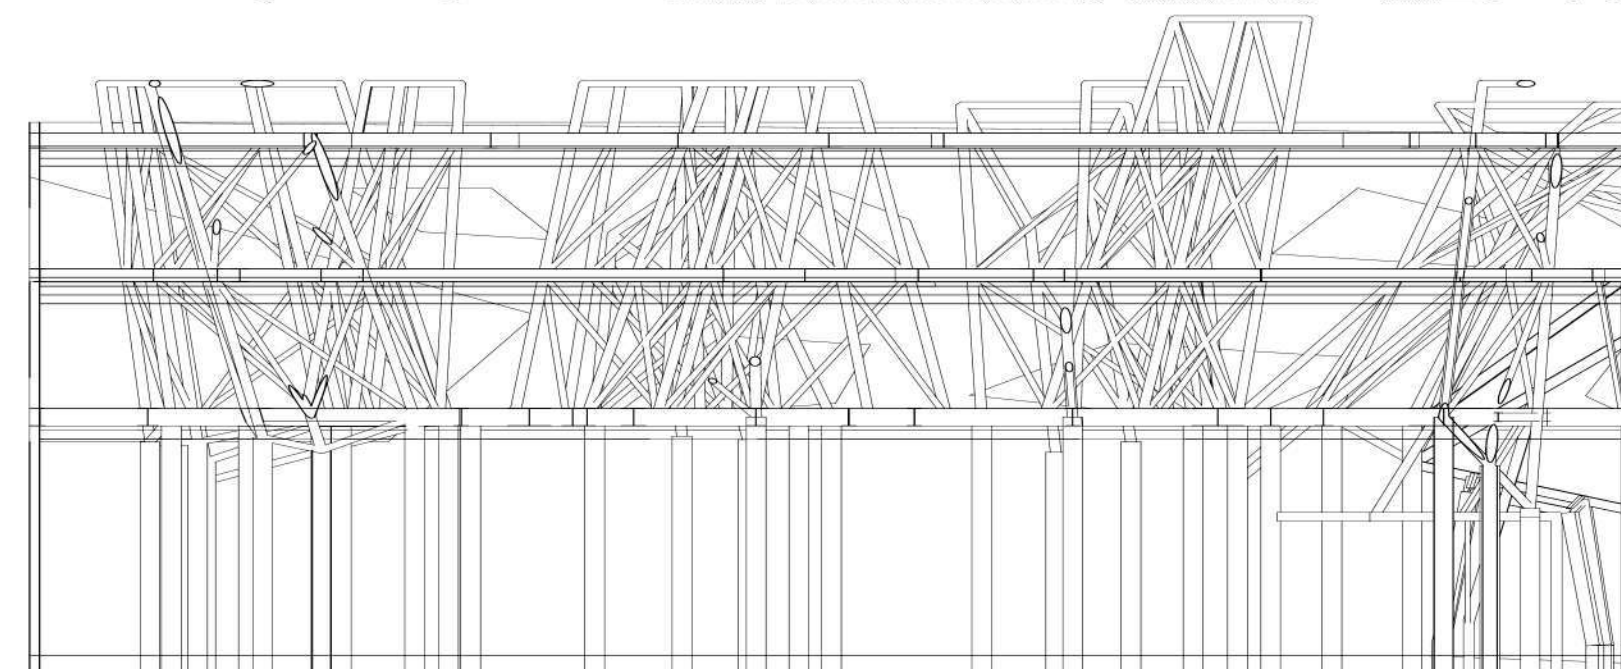

Catering

Shop

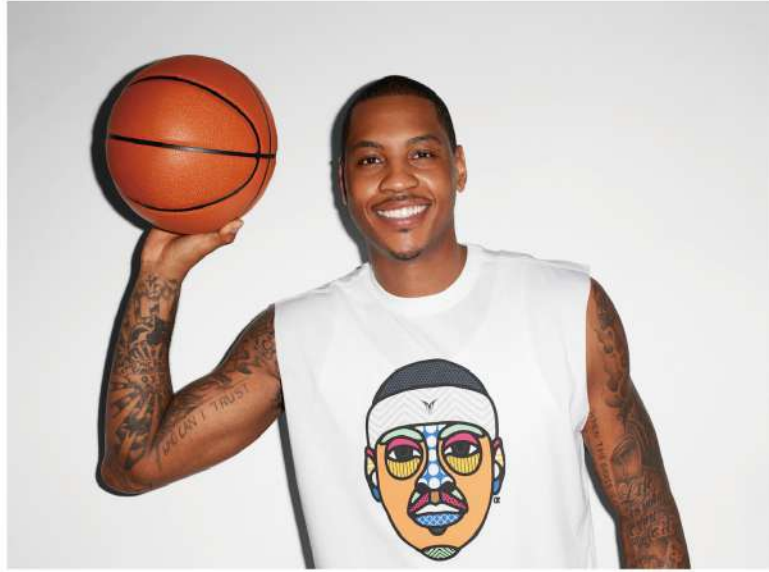

The exhibition hall is located at the center of Beijing 798 art zone and there are many galleries, art museums, exhibition halls, offices, shopping malls and restaurants around it. With convenient traffic, everyday it welcomes crowded visitors, including tourists, art fans and youngsters. This exhibition hall was built in 2010. In the past, it served as gallery and now it is an office zone. The architecture is divided into three floors and the body part is made of steel.

AIR JORDAN MELO 13

The table of PER variances of career life

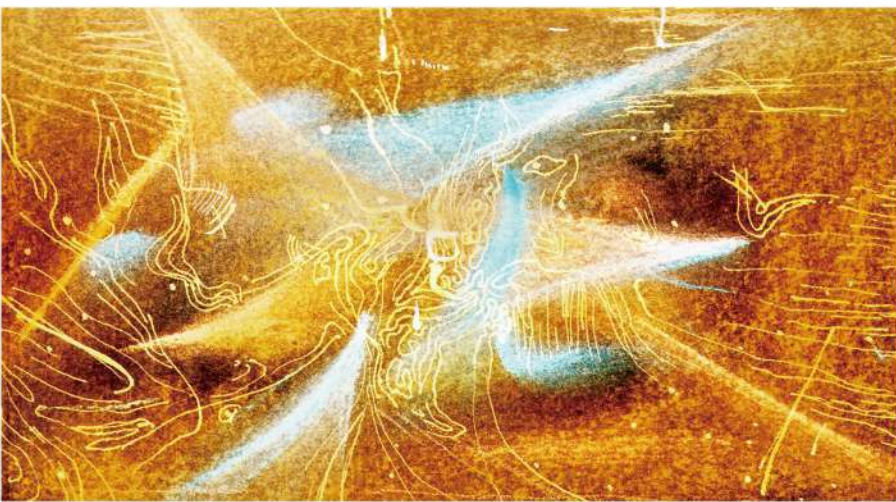

Testing of materials

Carmelo Anthony is a professional basketball player and now he services for Oklahoma Thunder team of NBA. During his career life till now, he has worked for three teams-Denver Nuggets, New York Knicks and Oklahoma Thunder. According to the data changes and achievements in his career life, I define emotional colors for the three phases-concentration at the beginning, painful struggling in the mid phase and the rebirth at present. I withdraw design elements from the sneakers he used to wear: the shape of sneaker rubber, the texture of cushioning device, the sneaker material and lines, etc. In addition, I also adapt metal internet, acrylic and other materials to make them a booth to show the specialized sneakers of Carmelo Anthony.

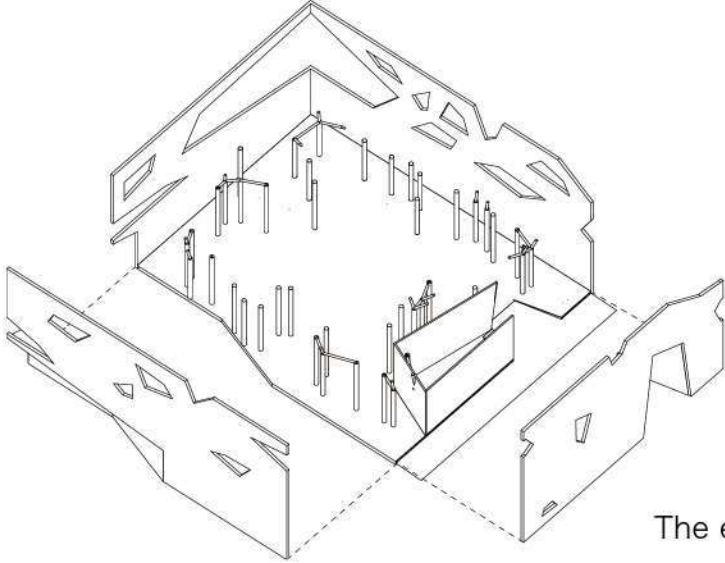

In *Stay Melo* shot by Vice Sport, the director shows his versatile roles in daily life.

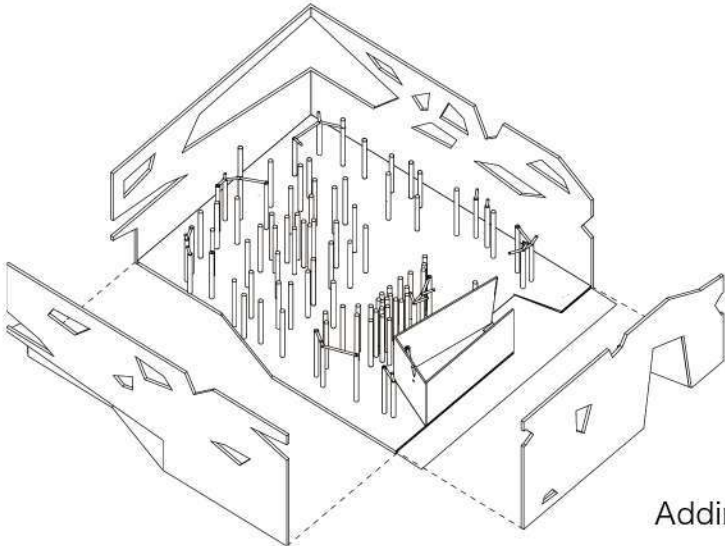

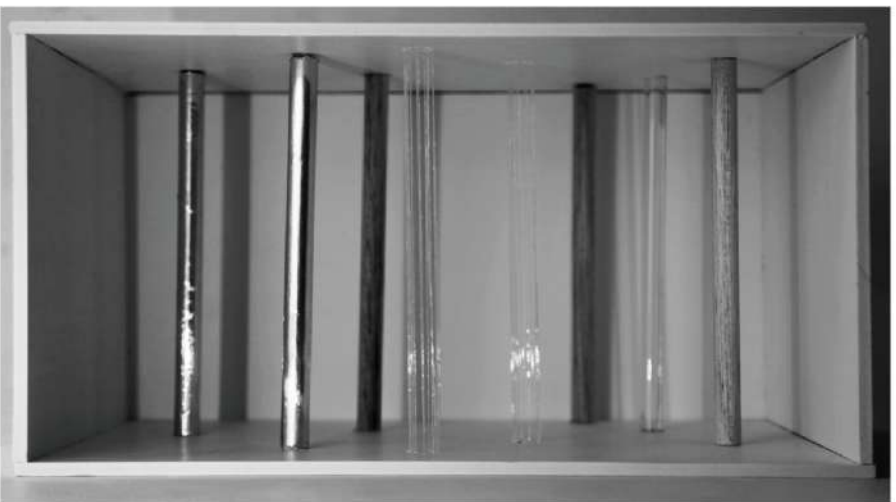

▼ Freehand sketching to present three stages

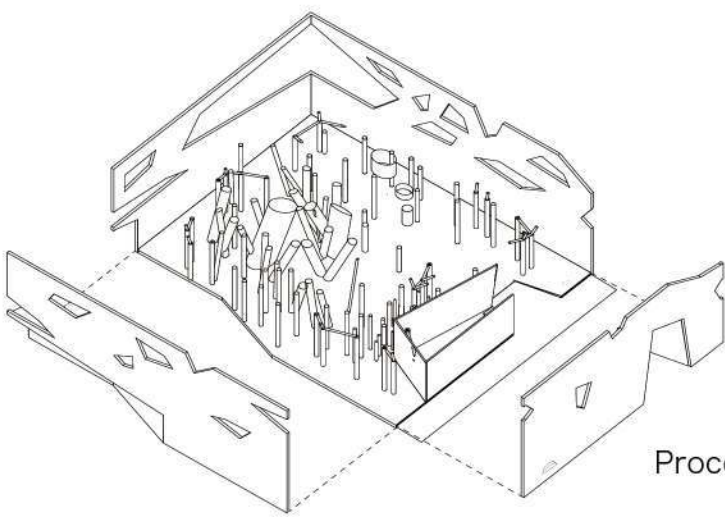

I set the existing pillars as the design elements and display their changes in three stages by increasing or decreasing the diameter sizes, replacing the materials and altering the angle of inclination. Then it is made into a display device by virtue of the steel rope and metal net.

The existing pillars on site

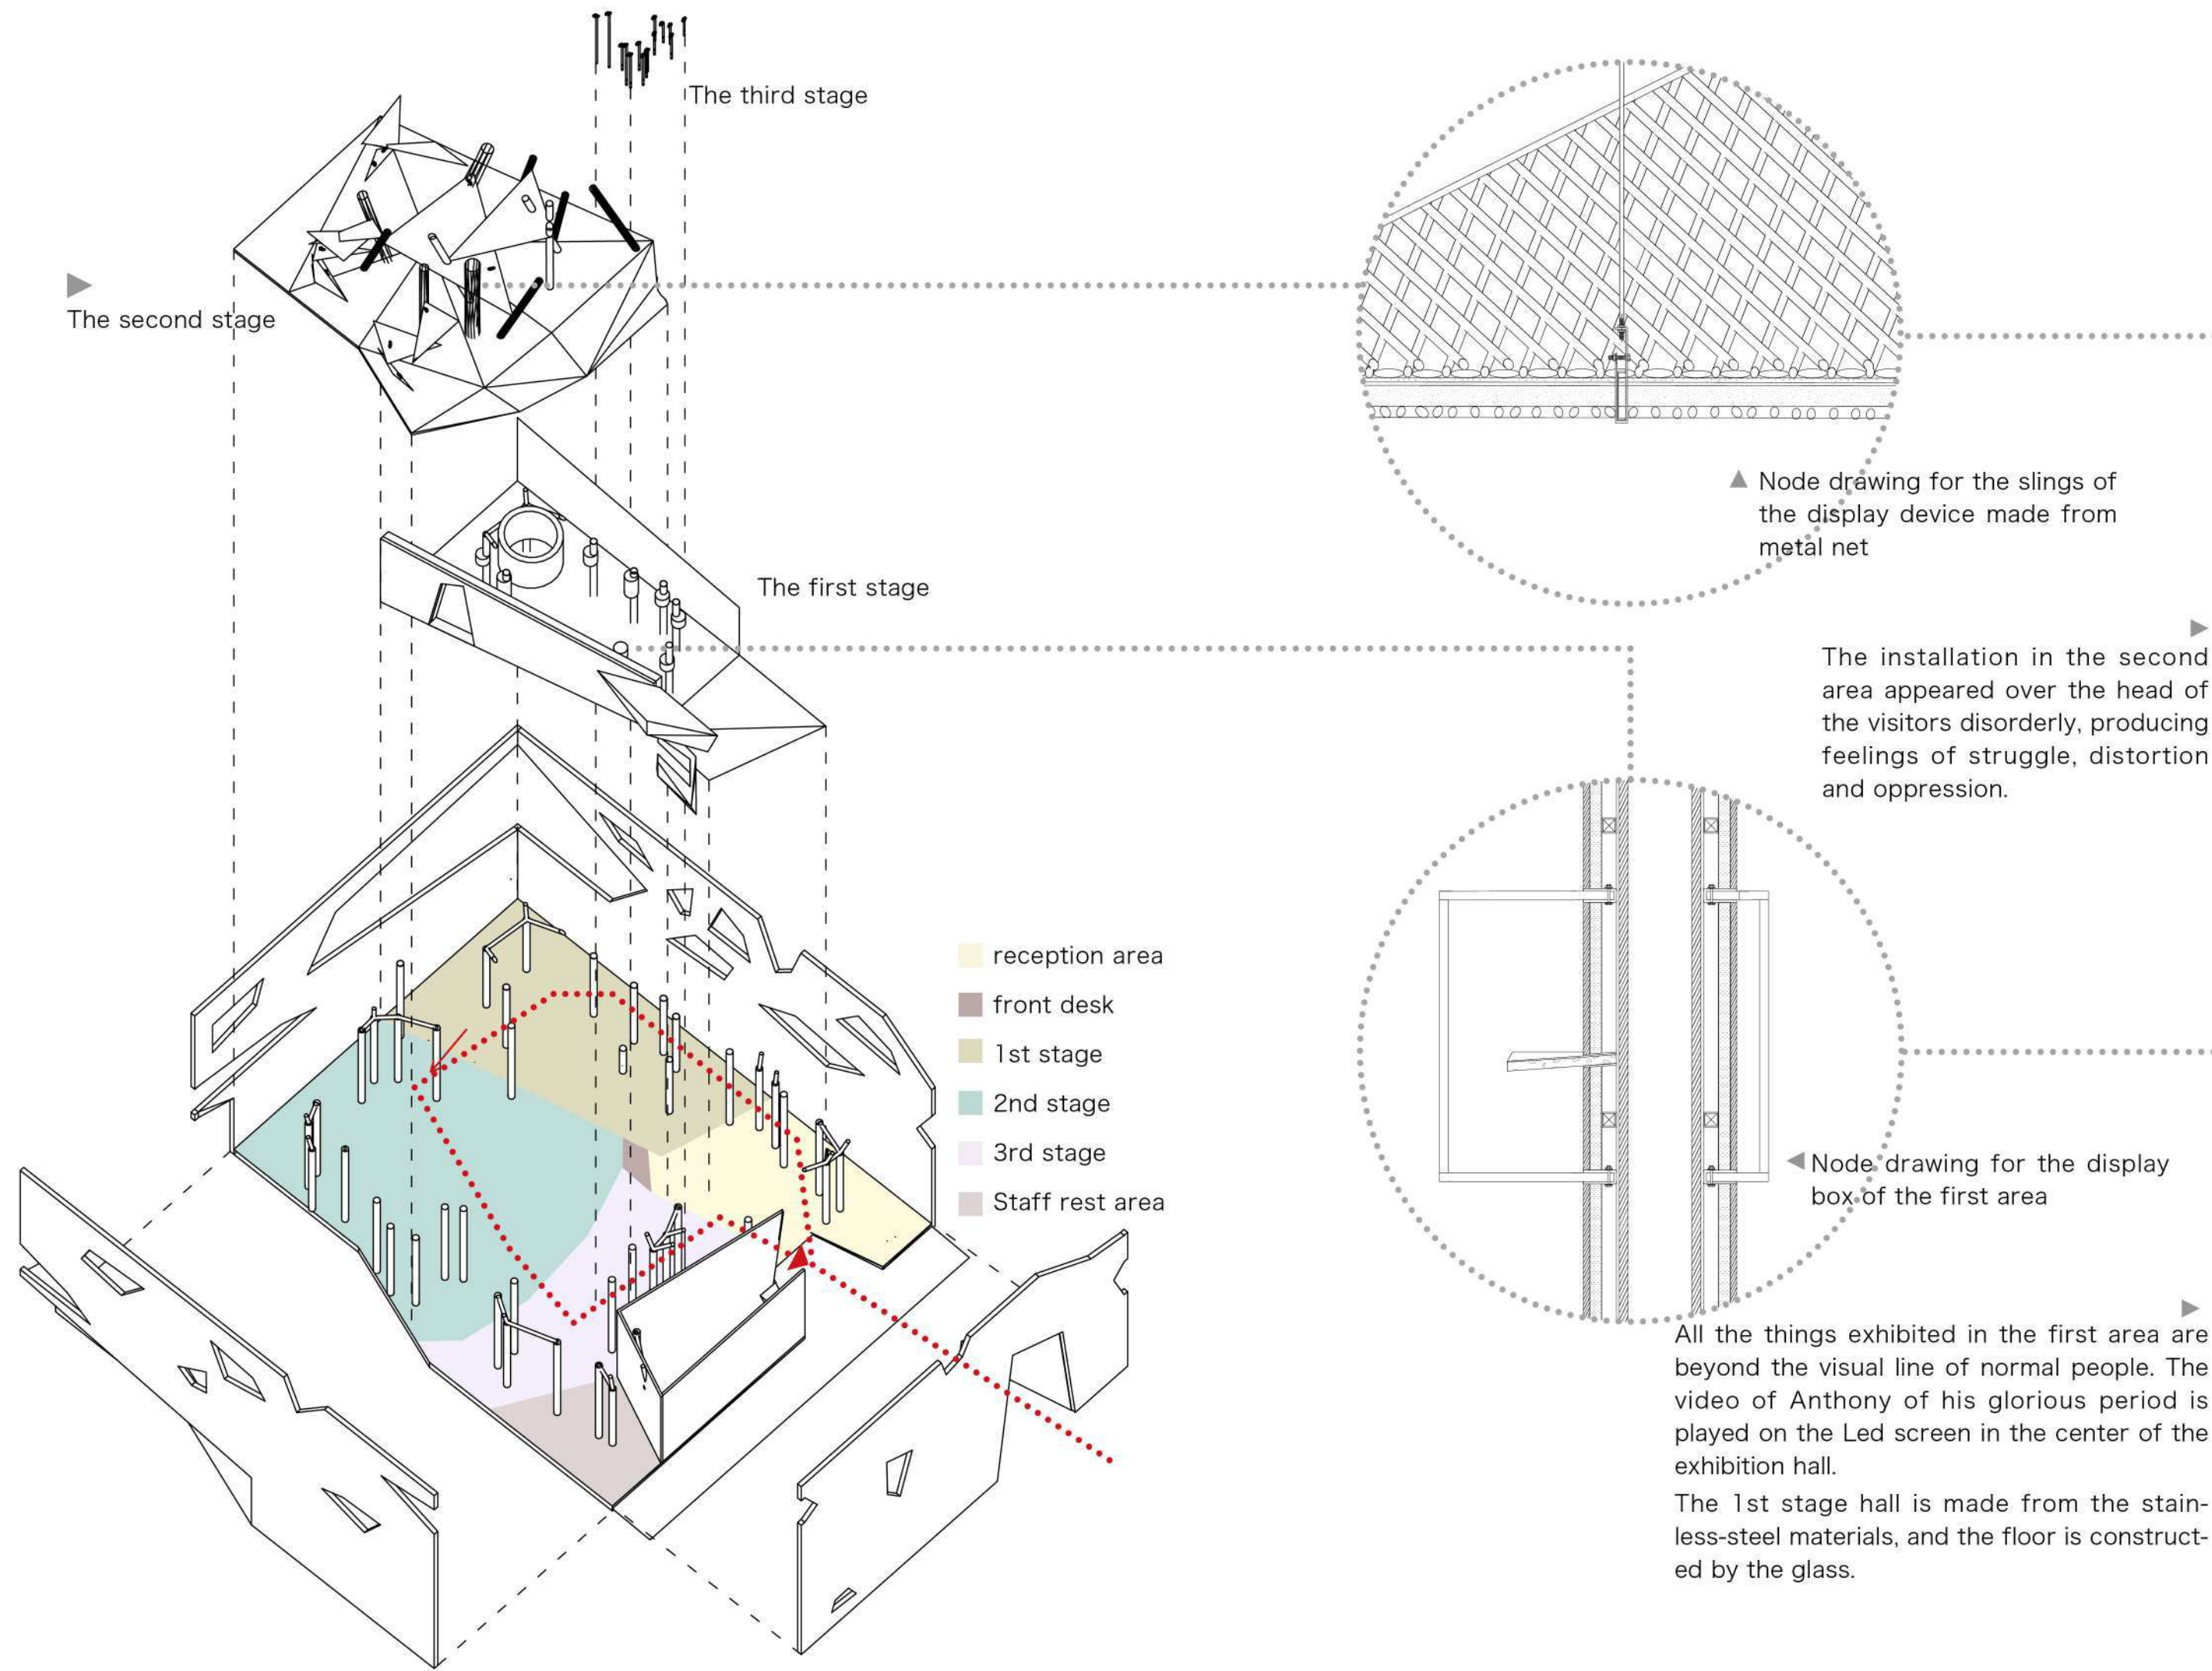

Adding pillars

Processing added pillars

The circular visitor movement pattern determined the layout plan, the visitors would pass an upslope in the first exhibition area, and then they would walk in an honorable and upward way. When they enter into the second exhibition area, the floor would become uneven, the gym shoes are constrained in the air by the metal net and steel rope. At last, the visitors would enter into the third area of softness. The visitors would shuttle among the soaring sneakers.

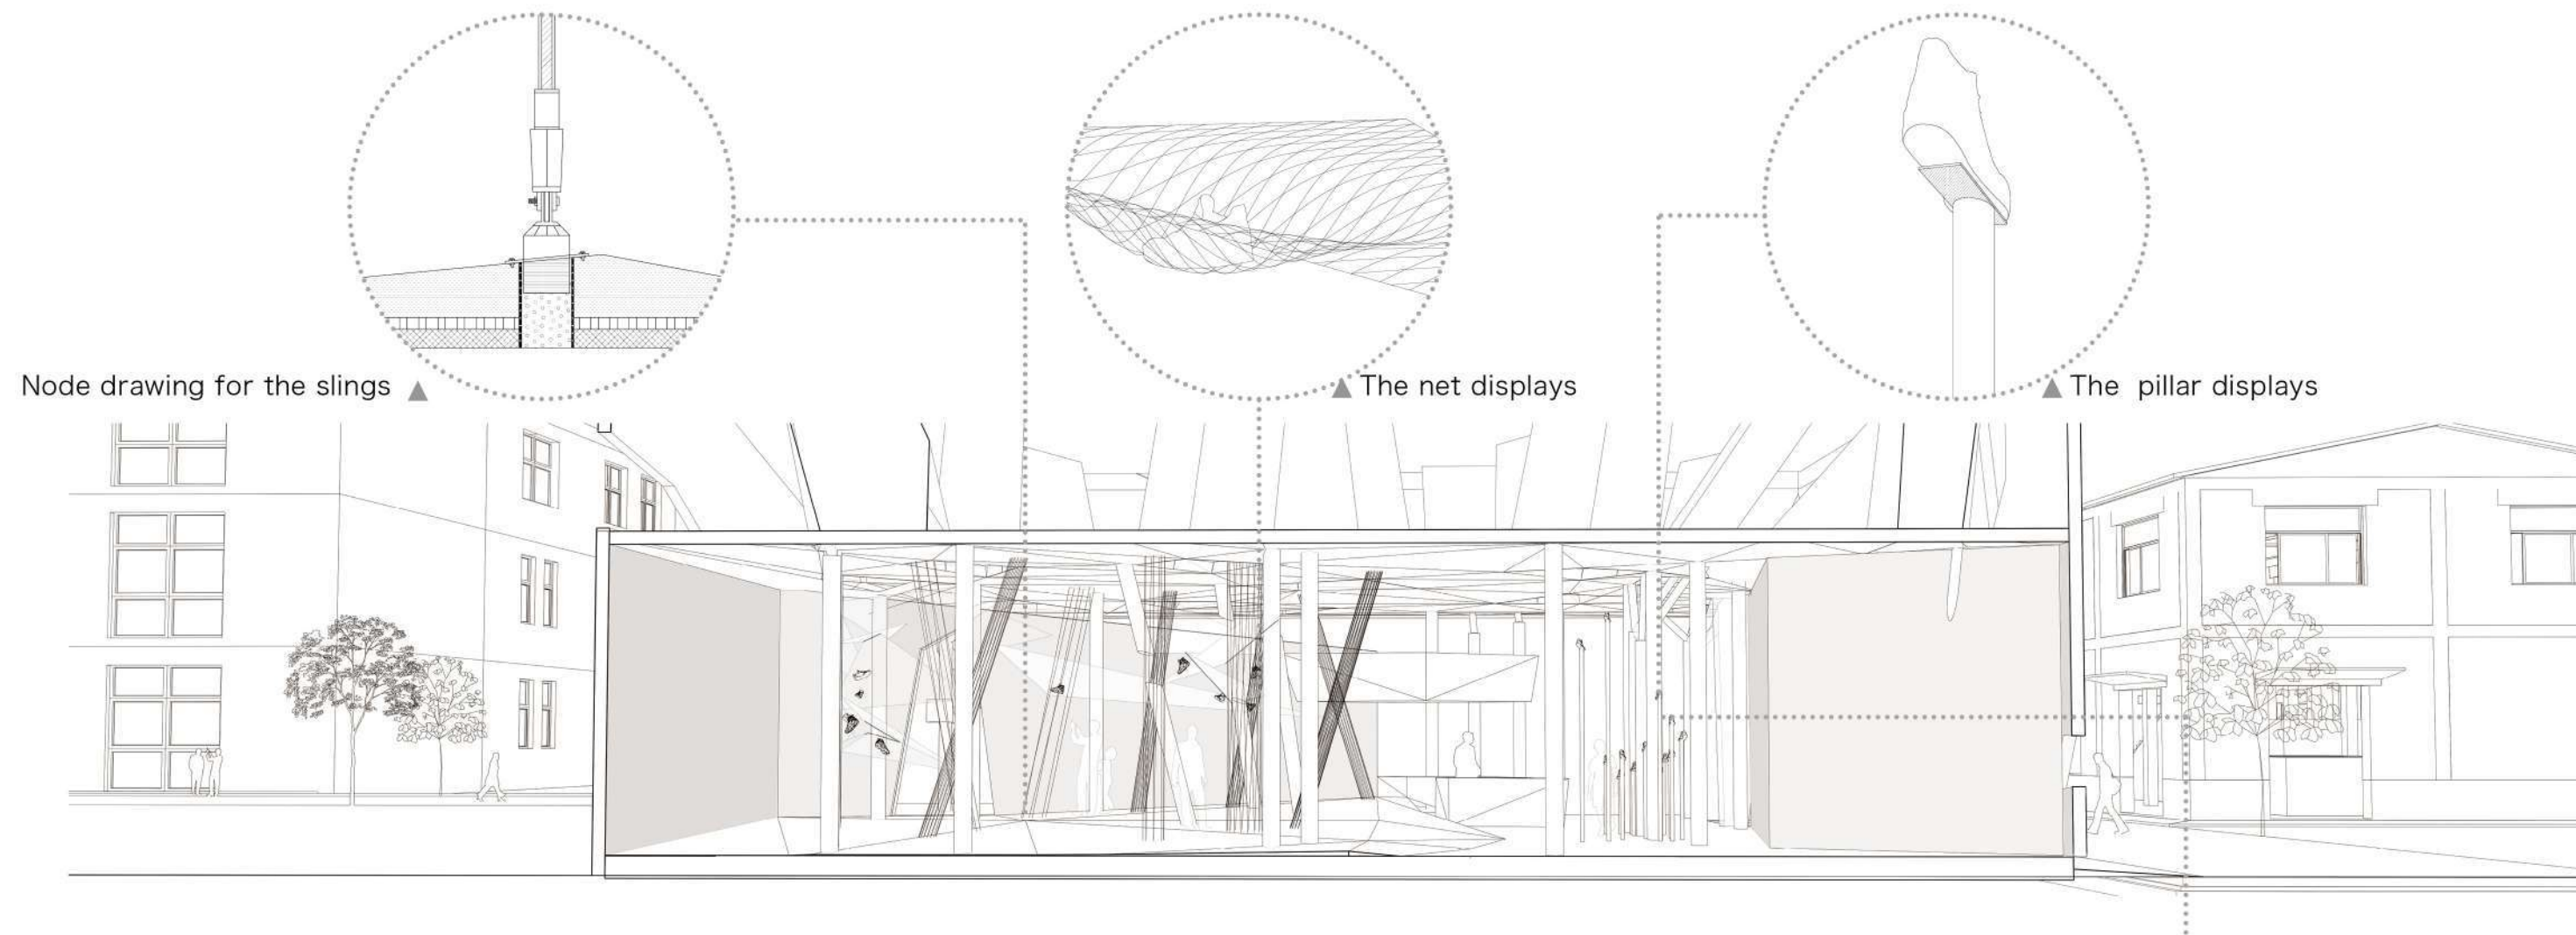

The installation in the second area appeared over the head of the visitors disorderly, producing feelings of struggle, distortion and oppression.

All the things exhibited in the first area are beyond the visual line of normal people. The video of Anthony of his glorious period is played on the Led screen in the center of the exhibition hall.

The 1st stage hall is made from the stainless-steel materials, and the floor is constructed by the glass.

The third stage

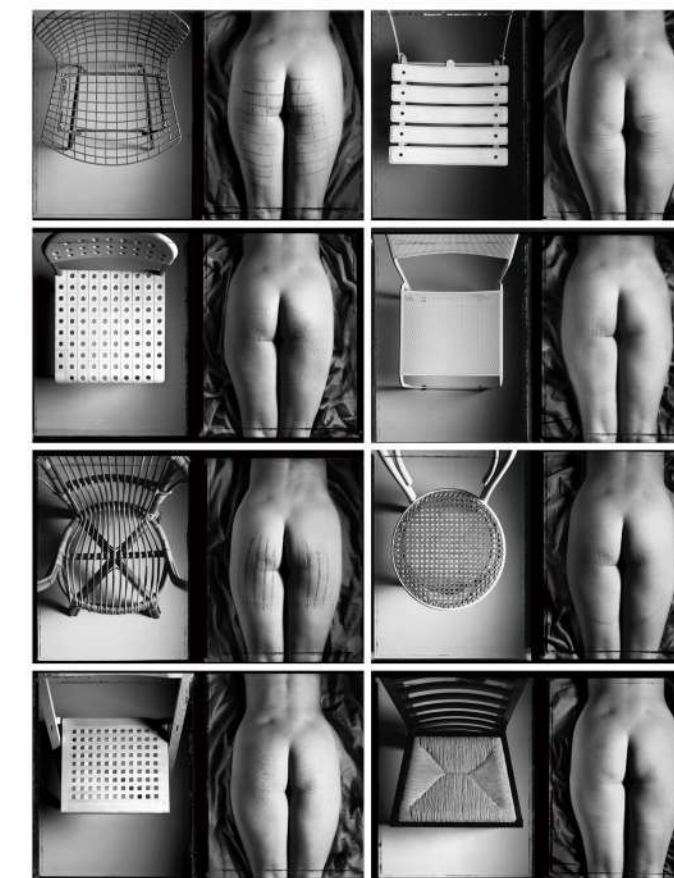

The metallic display device for sneakers can deform freely, the sunken part can fix the sneakers; the binding and constraint represent the tough period of Anthony. The refracted ray appearing on the transparent exhibition booth in the third area is conducive in establishing a bright and gorgeous space.

7 The Corner

Individual Work
9 Weeks

The Corner is a space installation work, also my graduation project. This design originates from my thoroughly observations for the smocking details. Based on my observation, I try to see the relationship between people and matters from a new perspective. I personate the chairs and listen to the opinions of chairs to enlarge such content via voices and then reflect them in the space, letting visitors review the relationship among people, chair and space. In October, 2017, the project won China Top 3 at C Foundation Scholarship for Excellence Program.

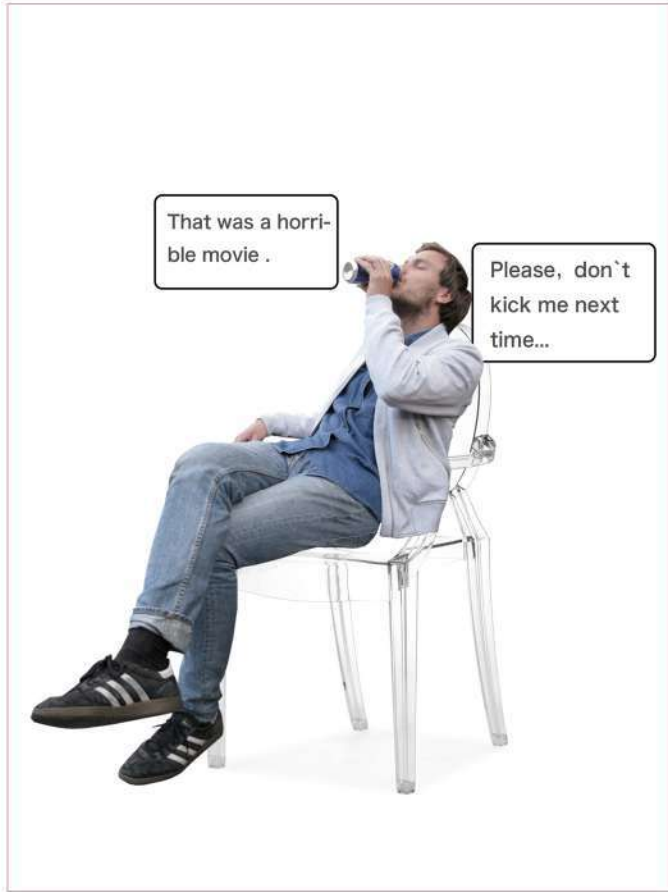

reference: *Contact* , Gabriele Basilico, 1984

What I notice is the touching details between people and chairs. People would have different feelings towards chairs they sit. It is a subjective feeling but since chairs welcome different people, do they have different feelings as well? In my opinion, the relationship between people and subjects are interactive. When people design products and spaces, they think more about their own feelings. I want to see from a different perspective and try to grasp the subject emotions to understand their feelings to re-interpret the relationship among people, subjects and space.

► Various of clothes
back fold texture

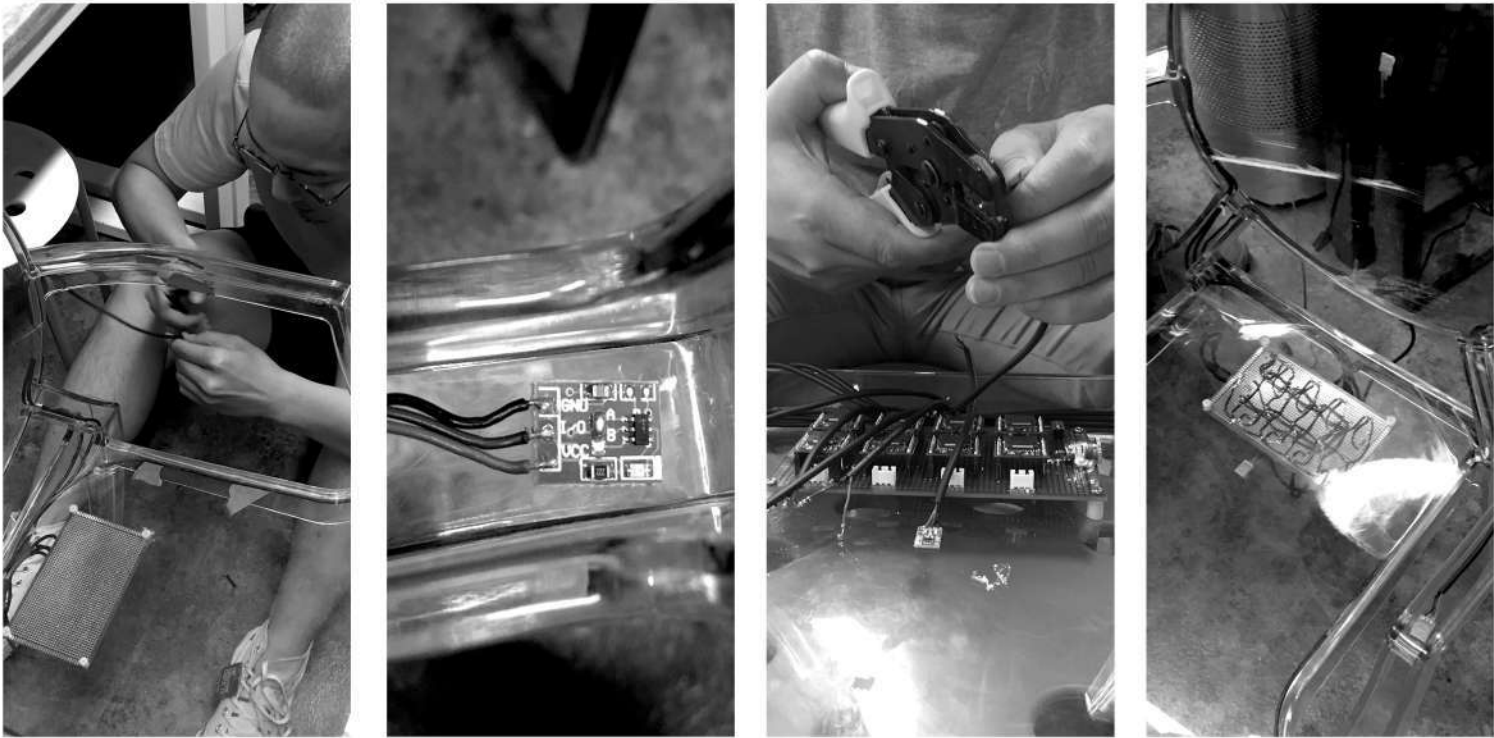

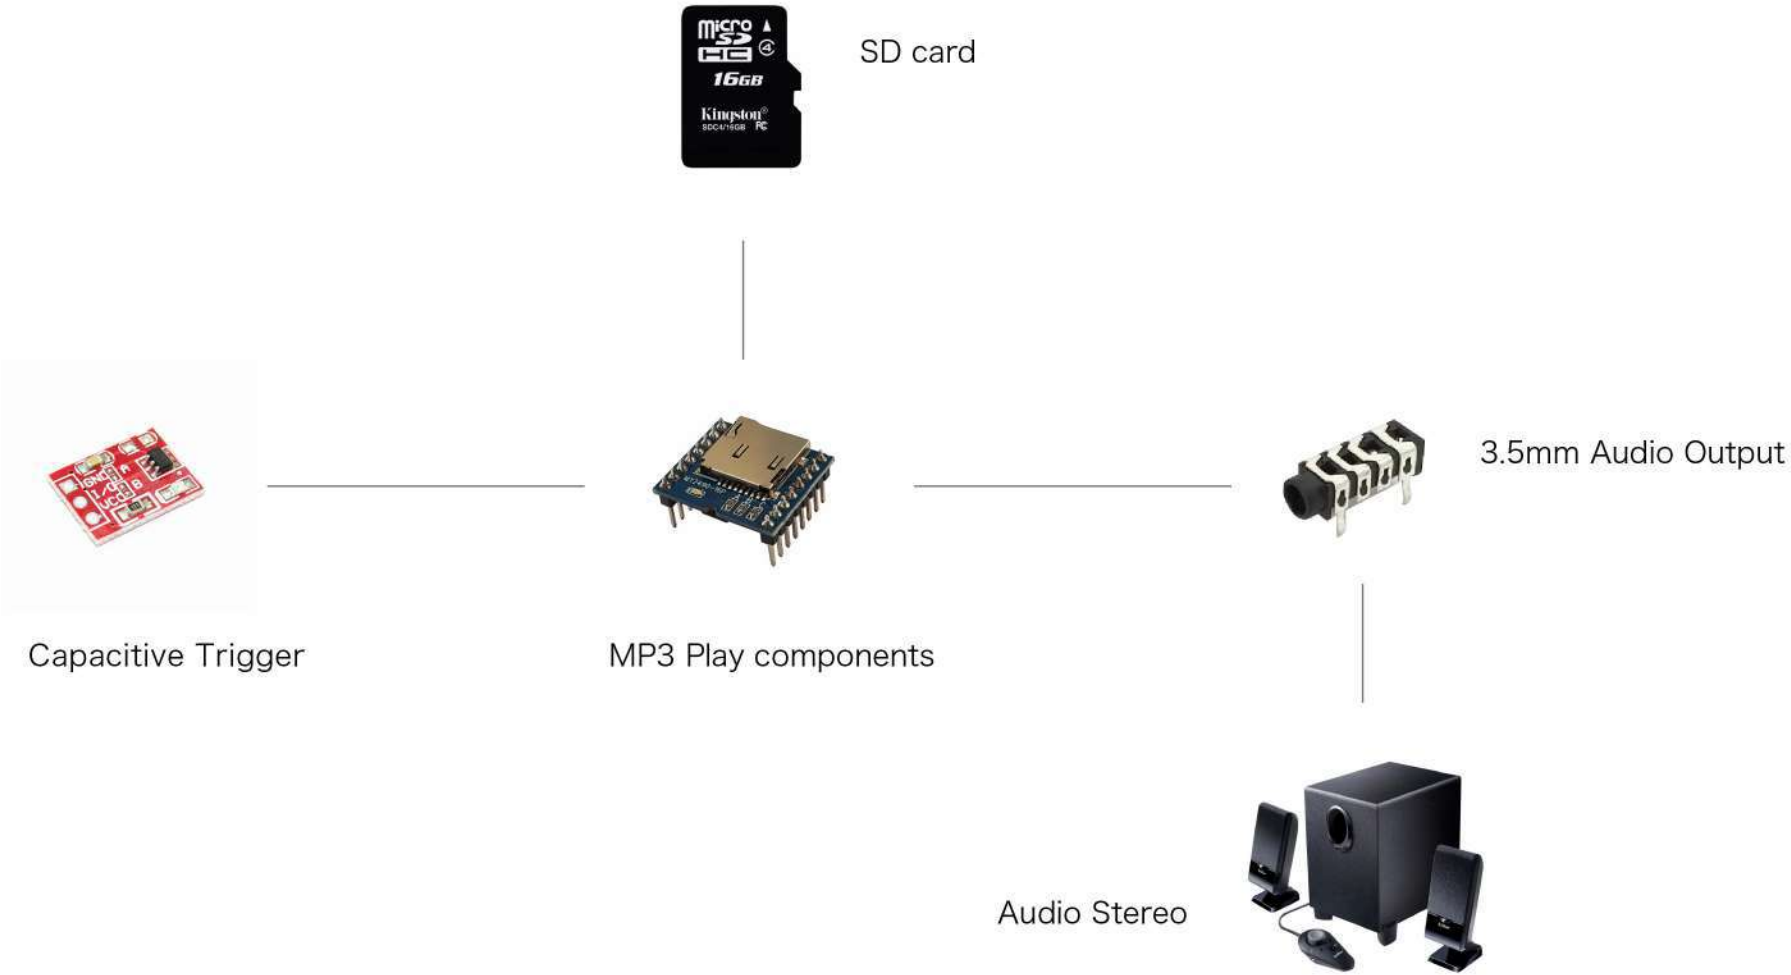

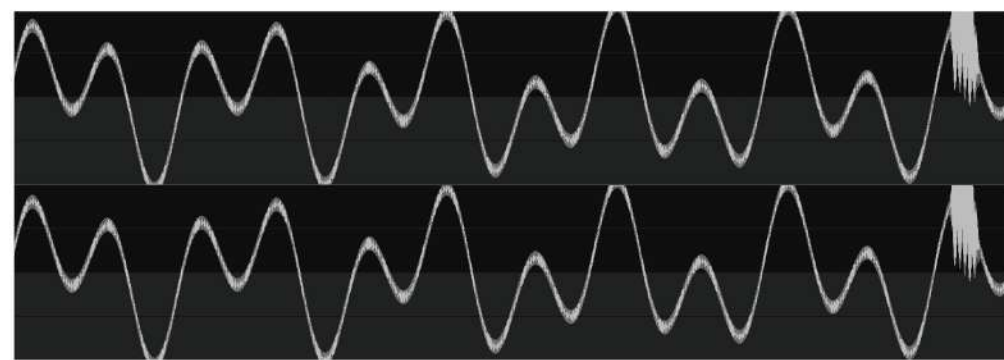

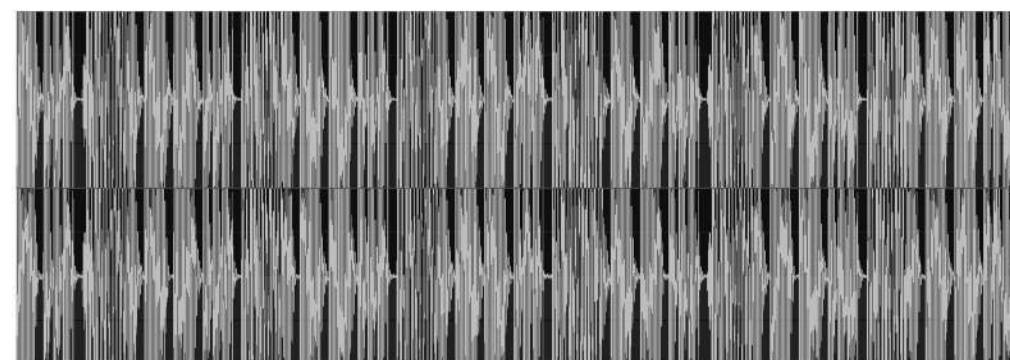

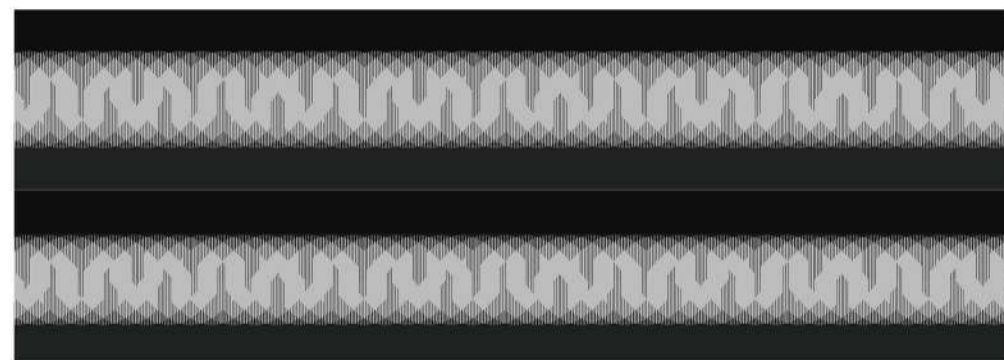

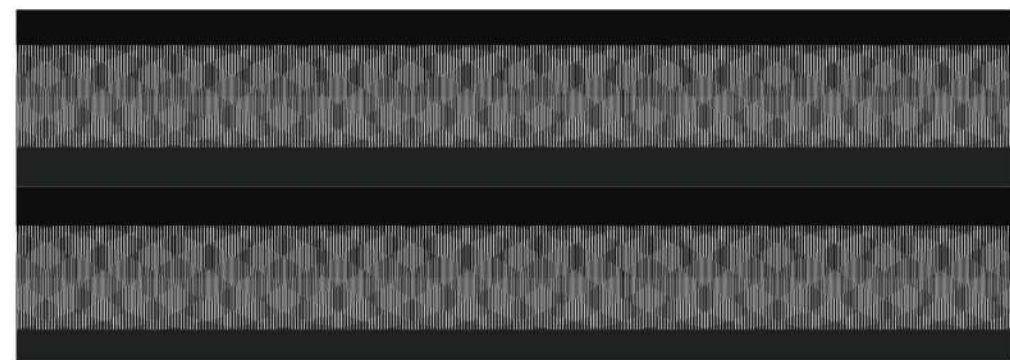

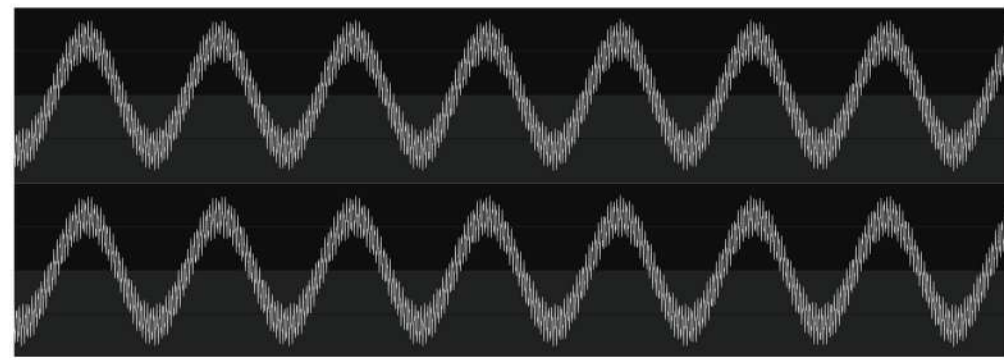

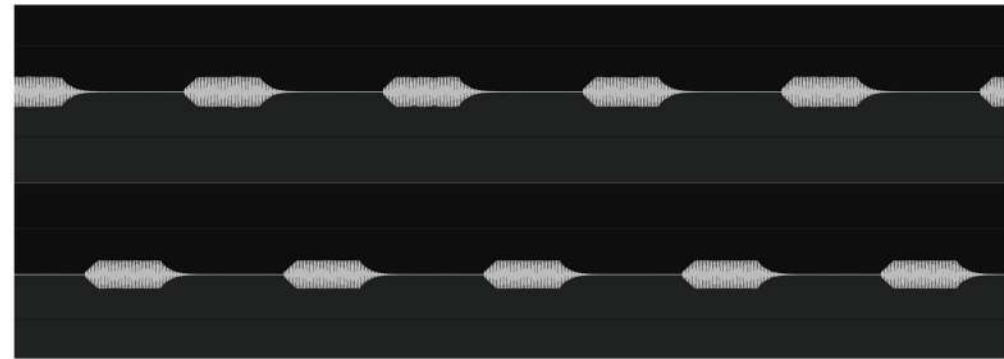

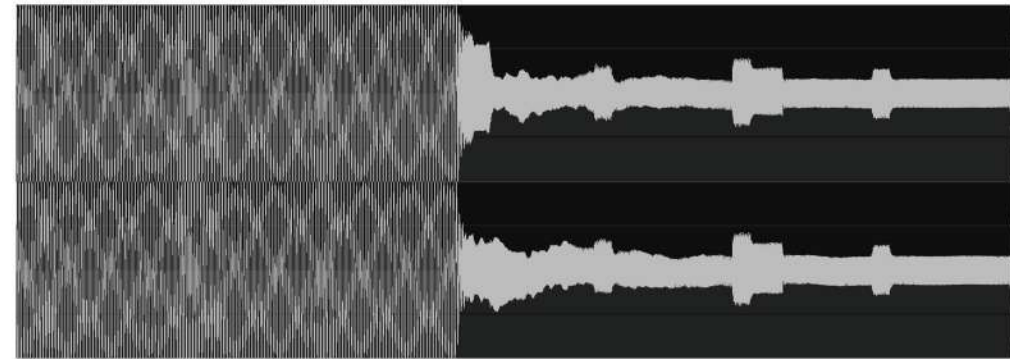

When you sit, what is the chair thinking?

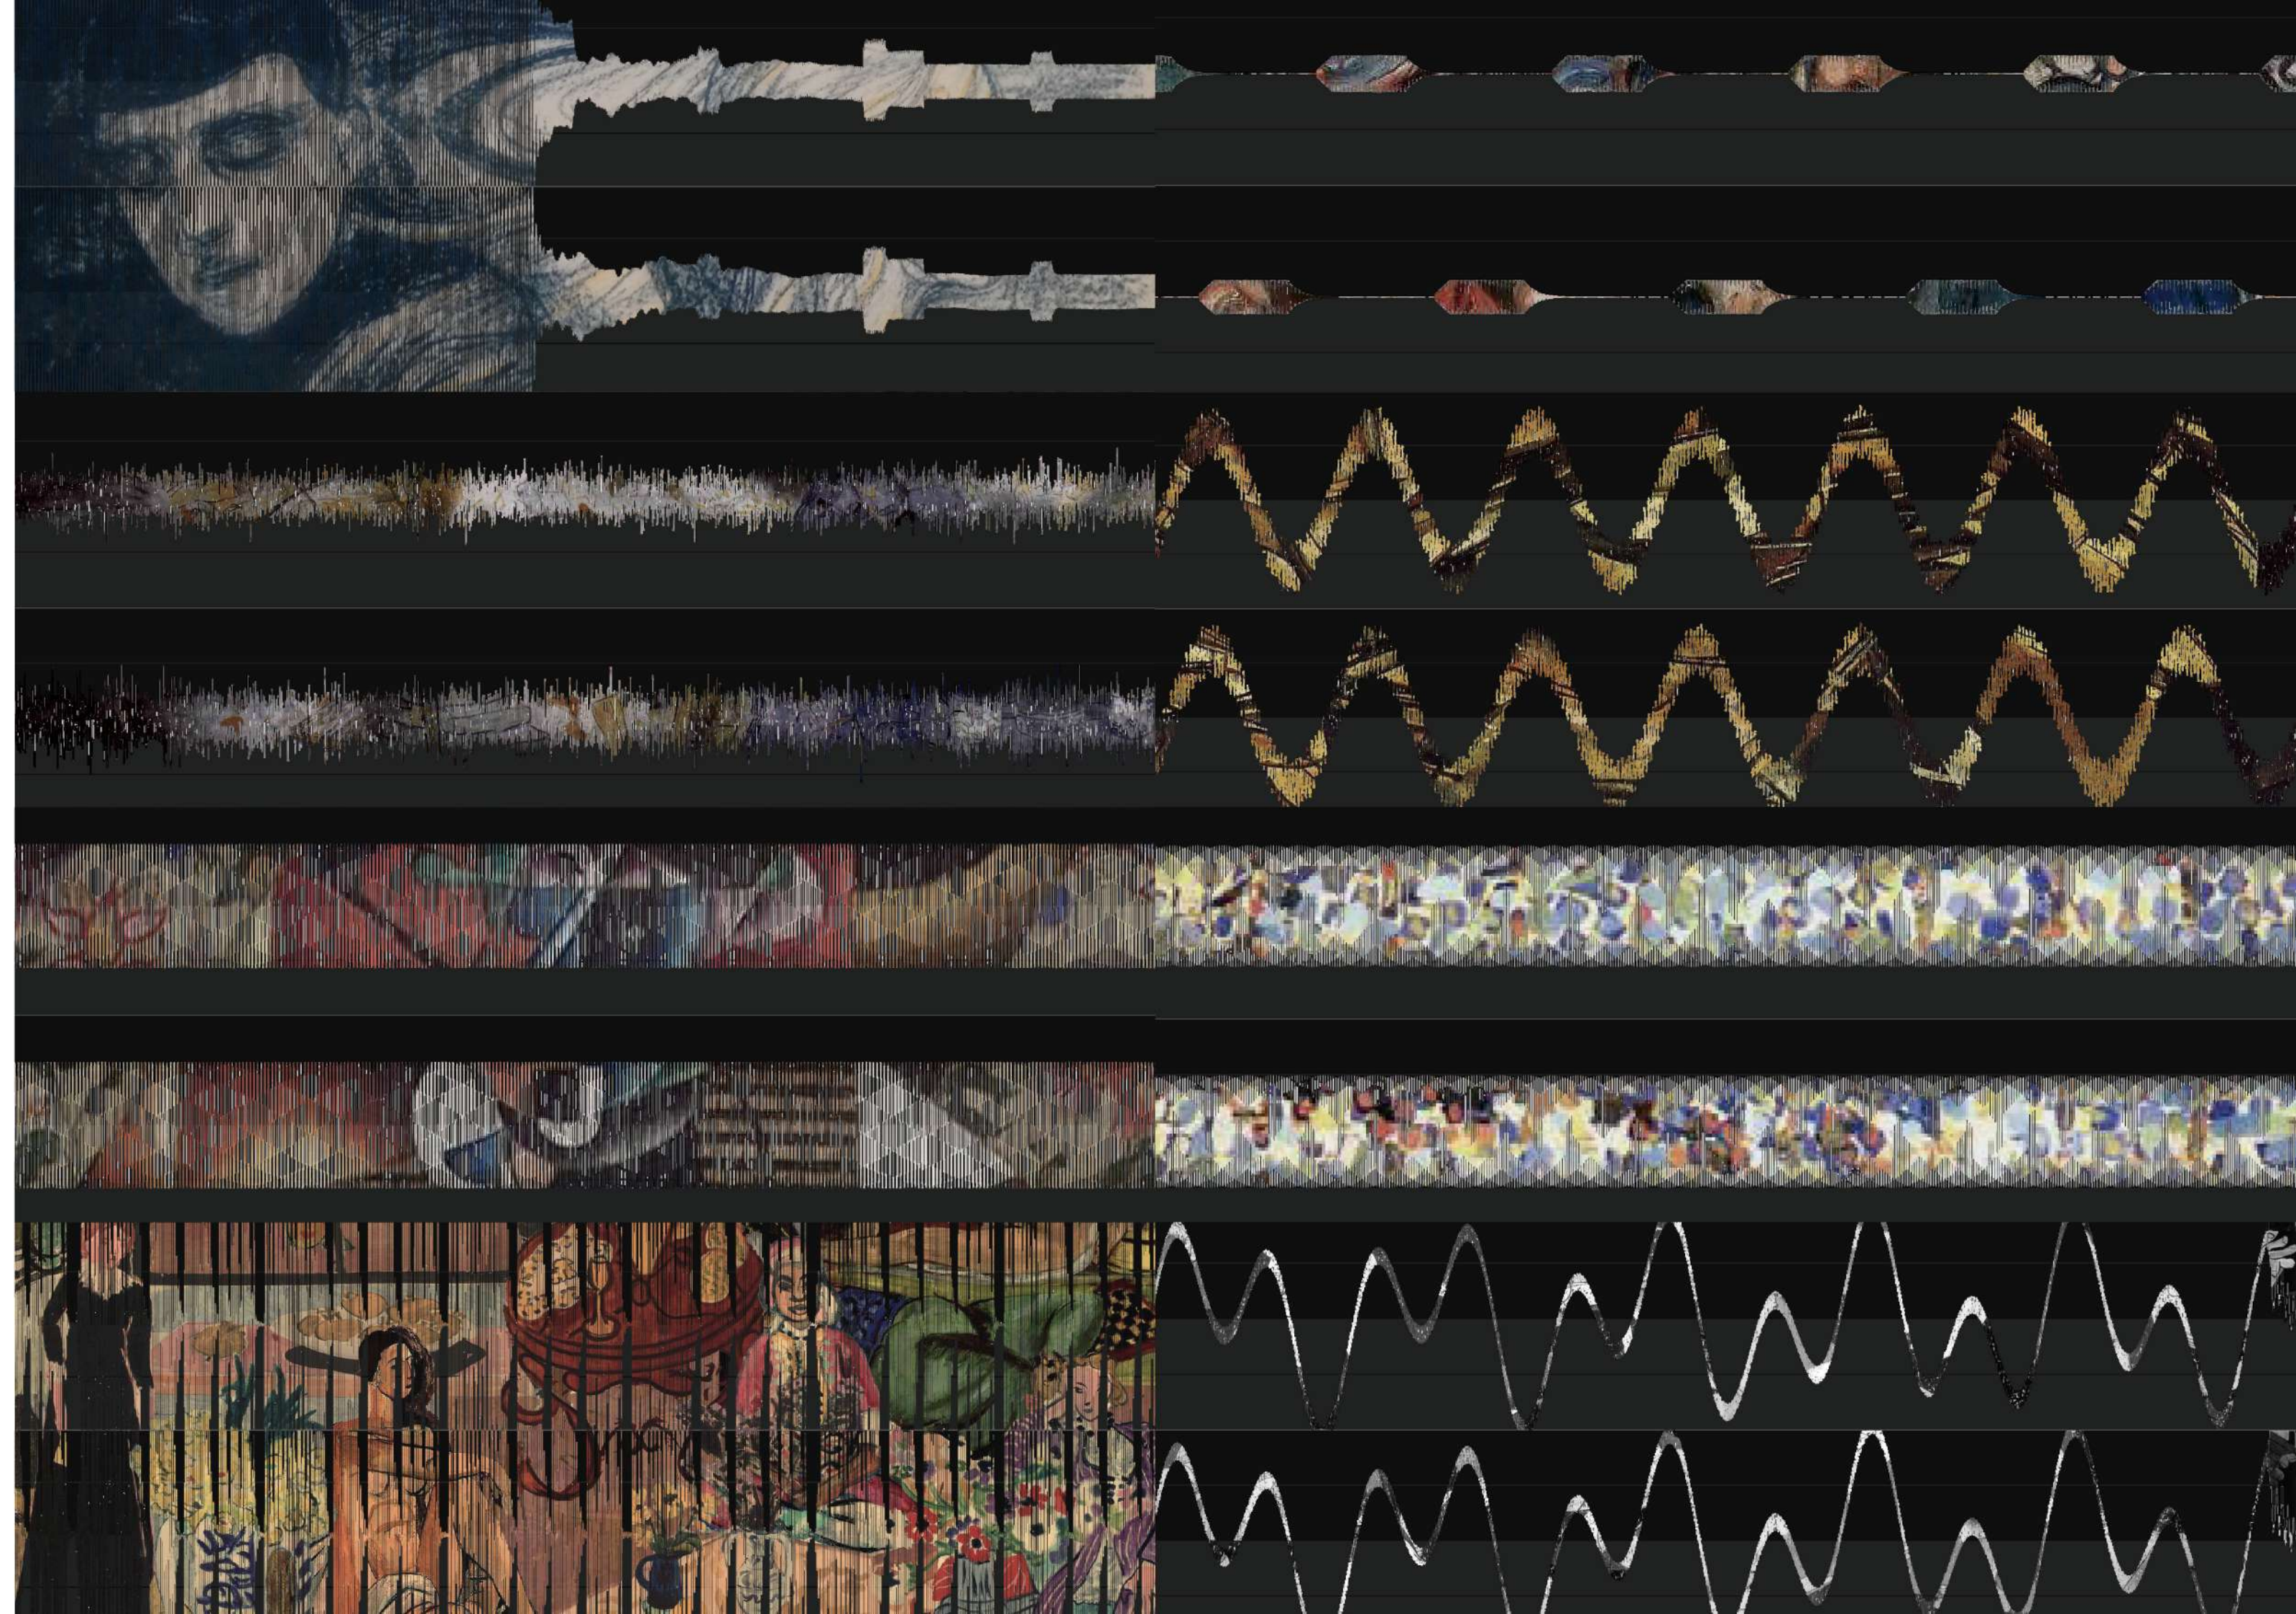

On 8 points where people and chairs always interact and change, I install sensor switch.

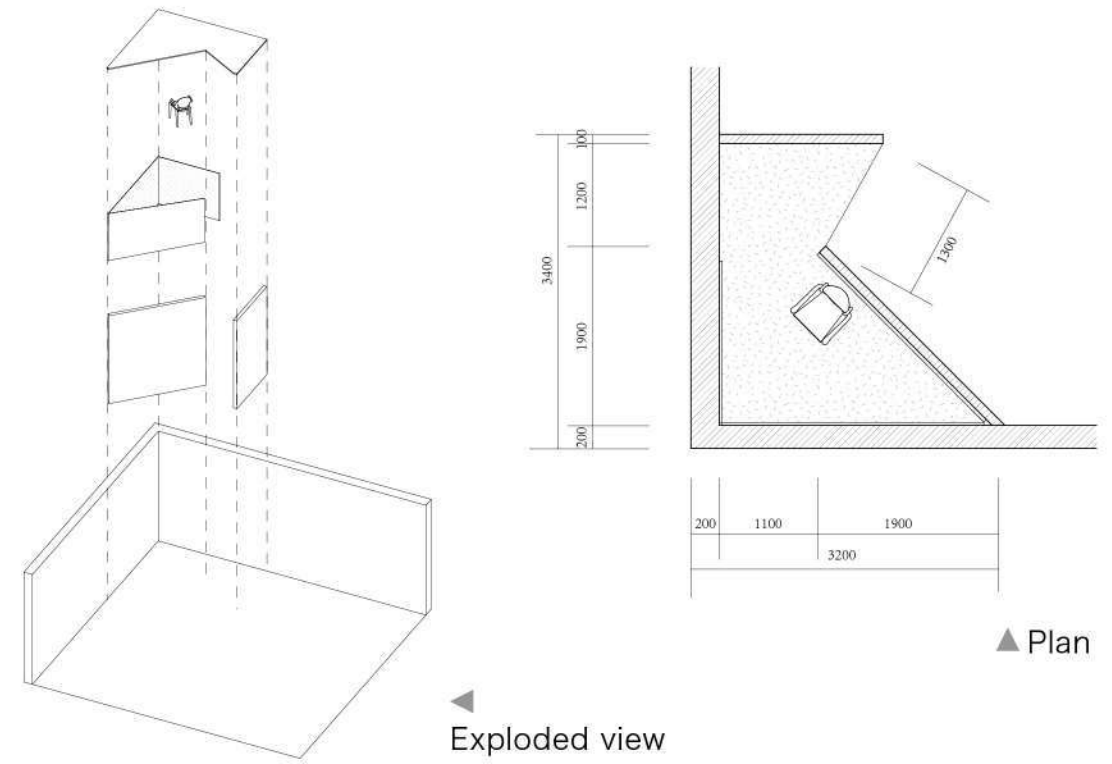

Processing

◀▶
I use AbletonLive to produce music and try to express different expressions via changing the frequency of electric tuning, wave length and other effects.

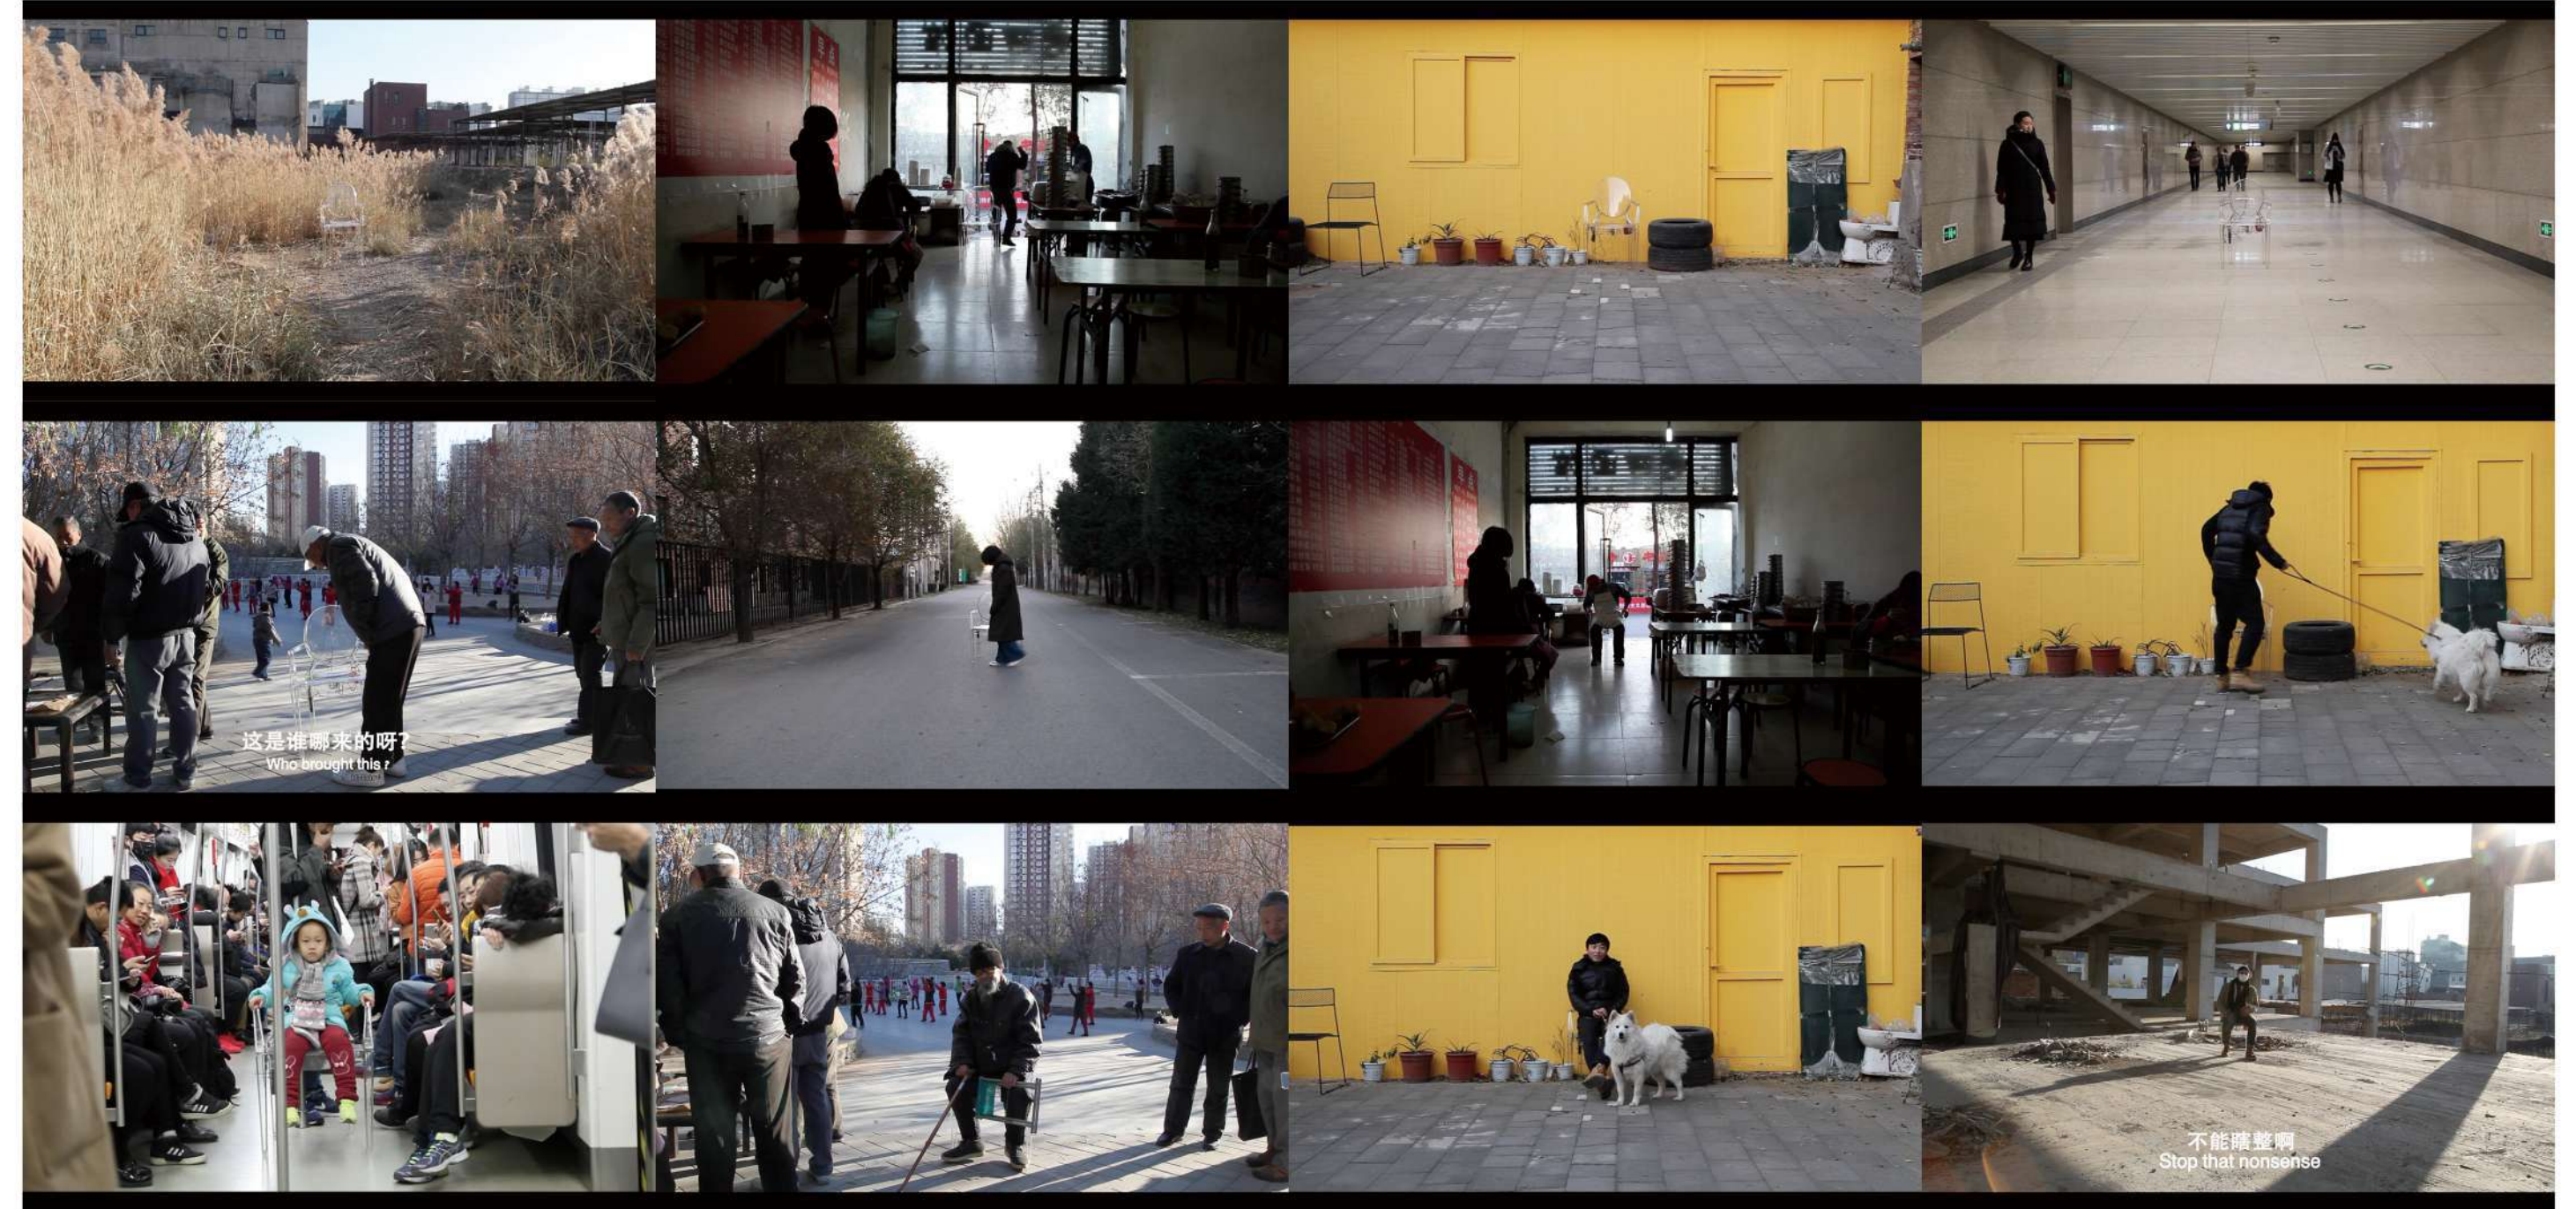

I choose to put my booth at the corner of the exhibition hall and create a semi-closed triangle via two walls. I print the interior hall black and fix the three walls up to 1.5m and down to floor mirror, just in order to make visitors unconsciously sit down. The wireless reflection of three mirrors make the space deep and visitors could only see countless self-images and chairs and hear the performing voice of the chair based on its own movement changes

After the exhibition, I take the chair out of the door and try to seek different people in different environments, wishing to see what kind of dialogues could they have with chairs.

Video capture

8 Effection

Team Work

3 Weeks

Yongze zhao, BO Gao

I grew up in a industrial city, the smell of heavy industrial machinery forever in my memory. I started with an old boiler plant to analyze the old coal-fired heating system to find the causes of such errors as environmental pollution and improper use of resources. With this theme, I made an interactive projection design in this old factory building. The production of this work used programming software, installation art, etc., at the same time, the work is also like a performance.

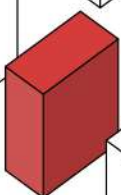

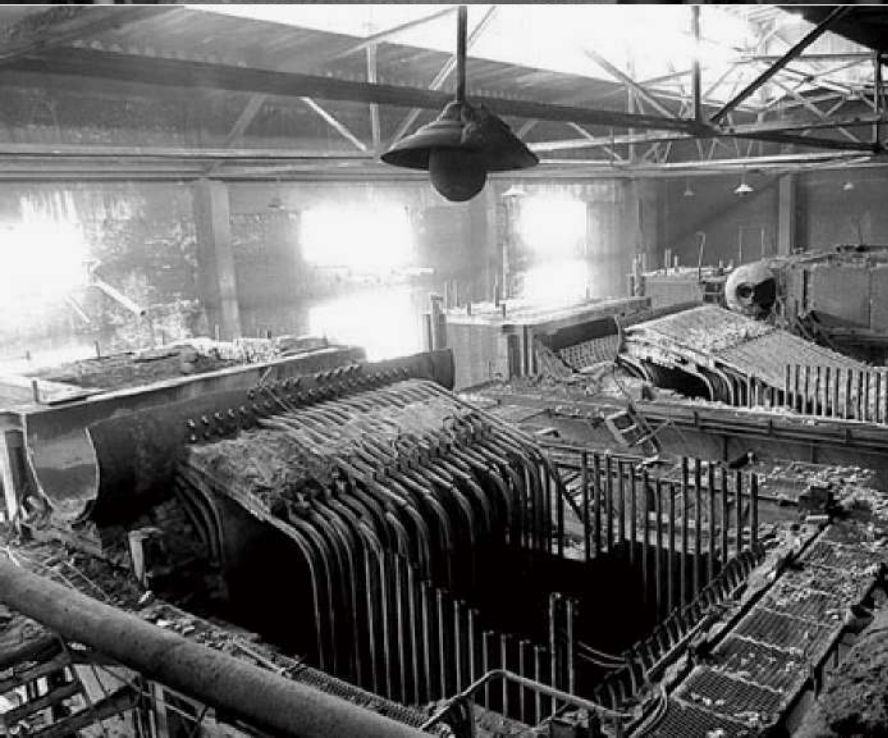

Image from web

The site is located in Daxing District, Beijing, the suburbs of Beijing. This building used to be an old boiler center. A few decades ago, most of the buildings in China were constructed with this method of heating, and every winter uncalculable coal resources were burned. Not only caused the destruction of resources and environment, but also caused the air pollution.

I chose the front coal hopper of the legacy boiler house left over.
Coal hopper used to play the role of storing coal and transporting coal in the operation of the boiler house, where the treated coal awaited to be burned.
Slanted surface gives a sense of oppression.

No individual raindrop ever considers itself responsible for the flood.

We were once unaware of the serious consequences of the method of burning coal for energy.
Although such methods of heating have now been replaced by new scientific techniques. But unreasonable acts of over-exploitation remain in other areas.

Image from web

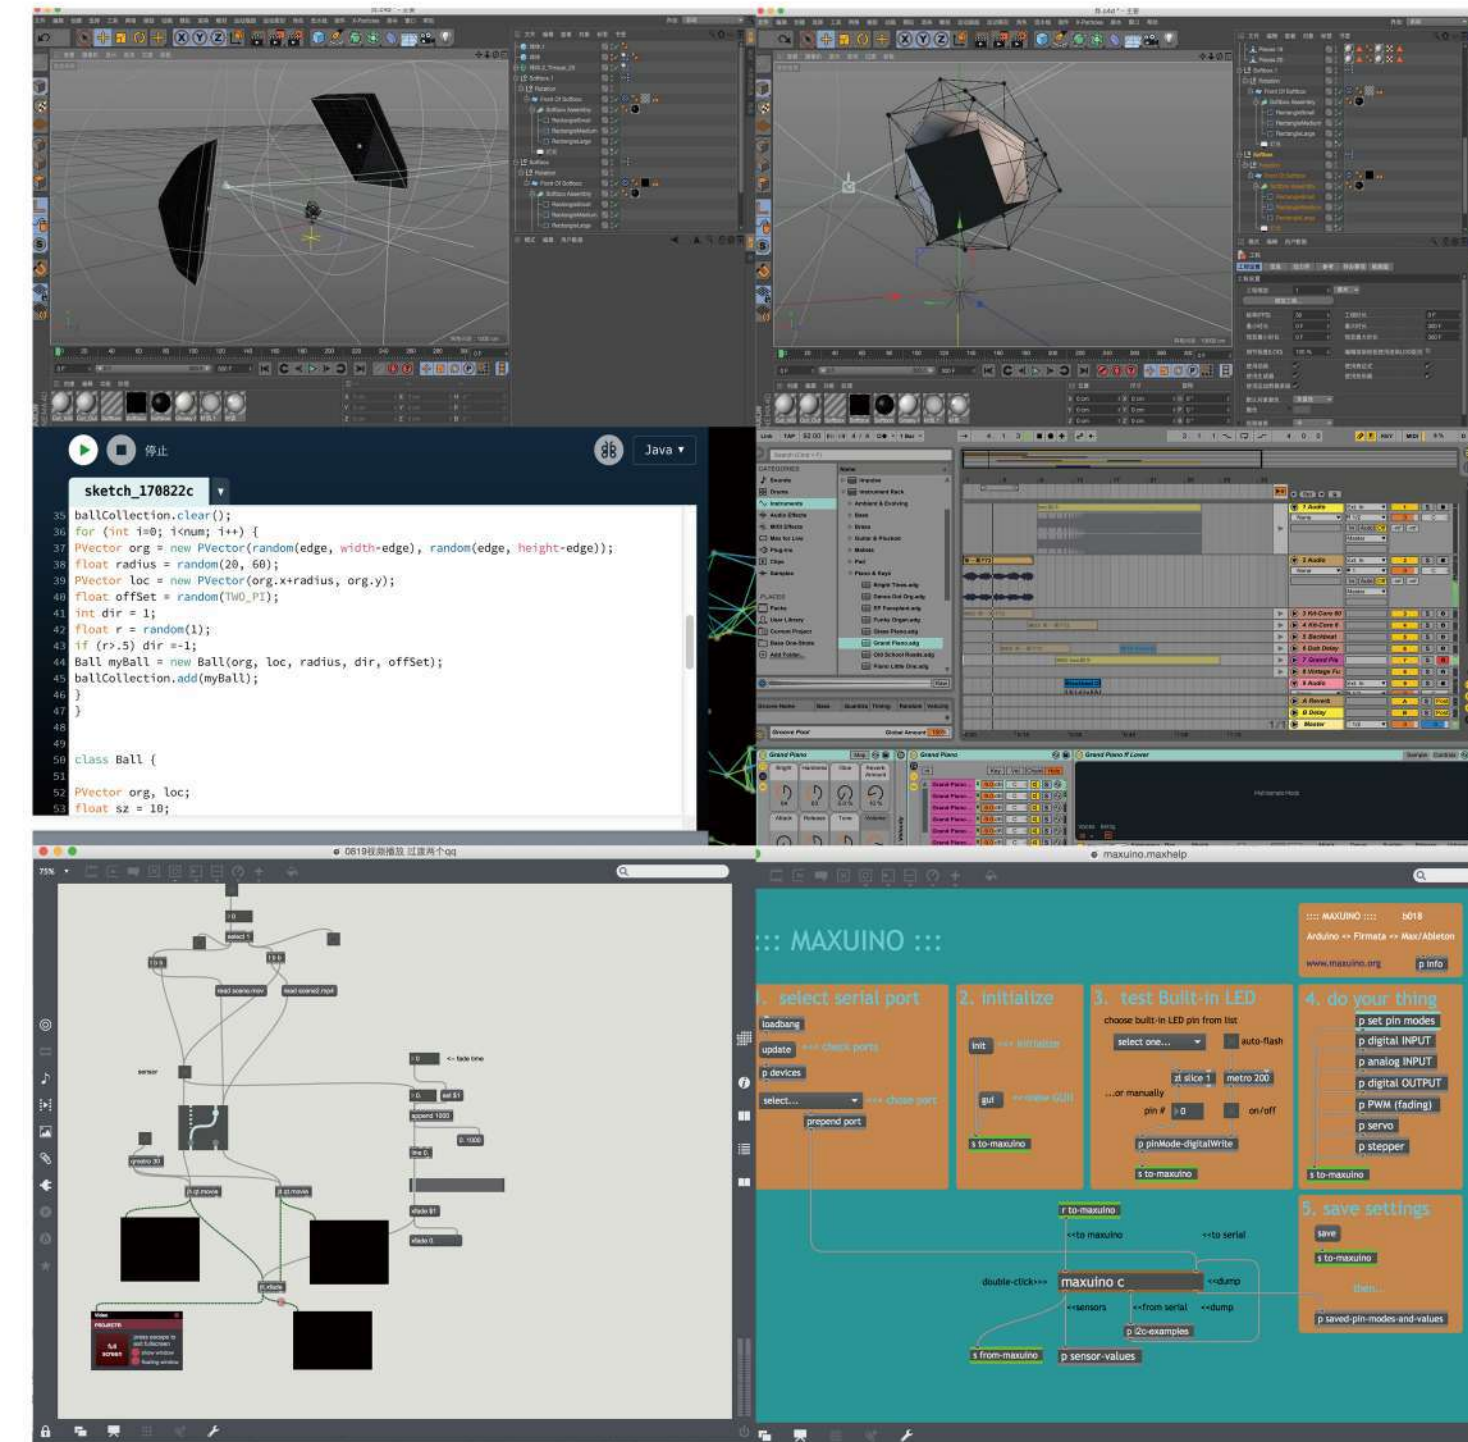

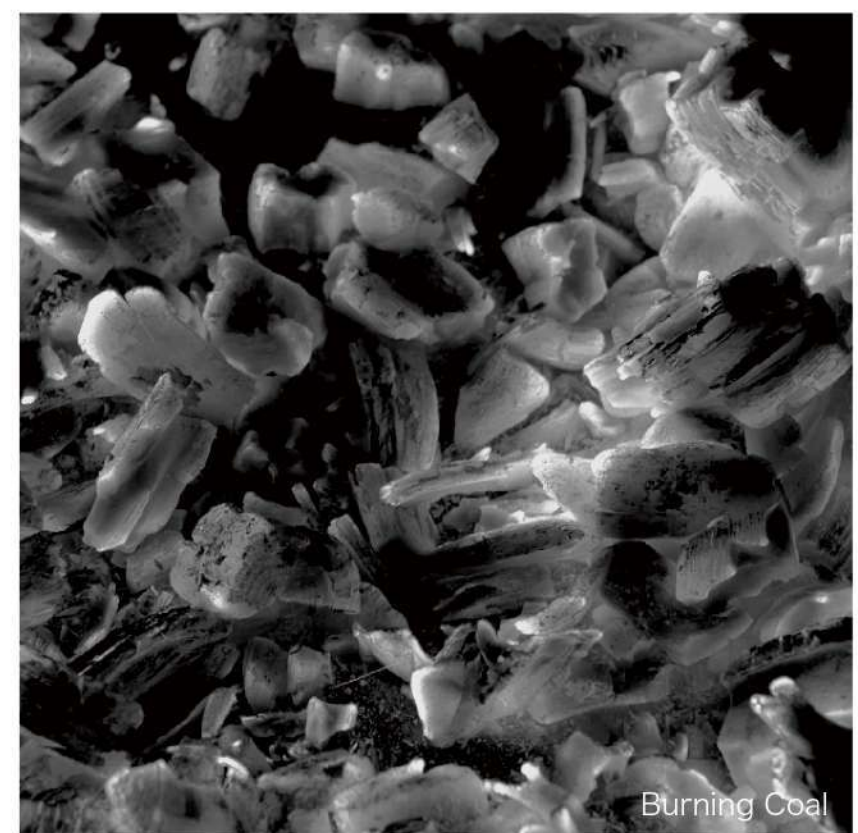

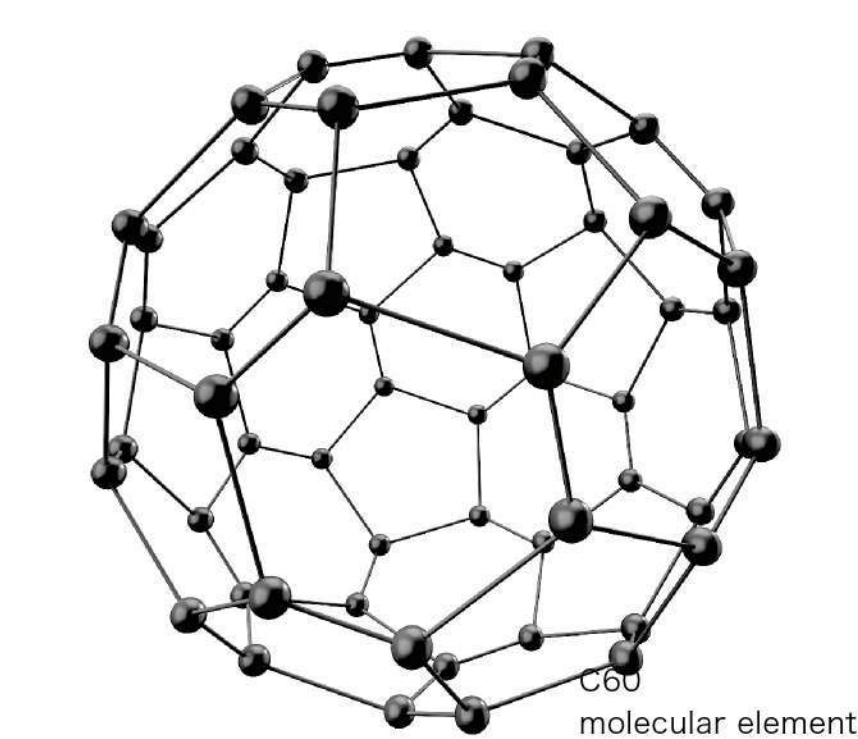

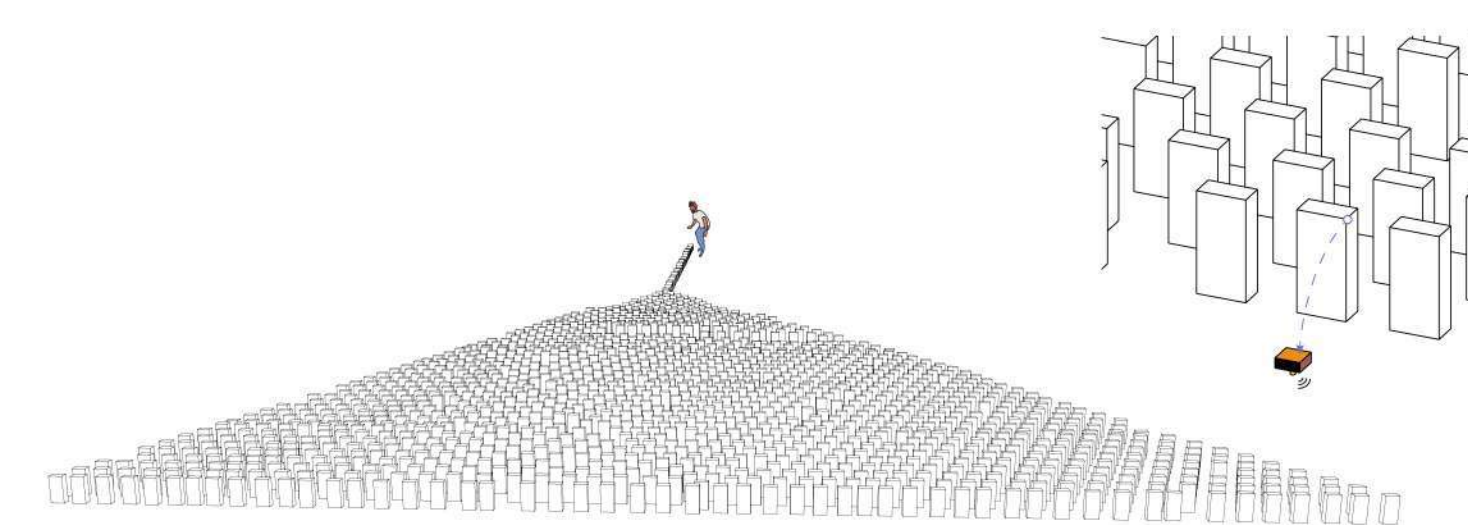

Image from web

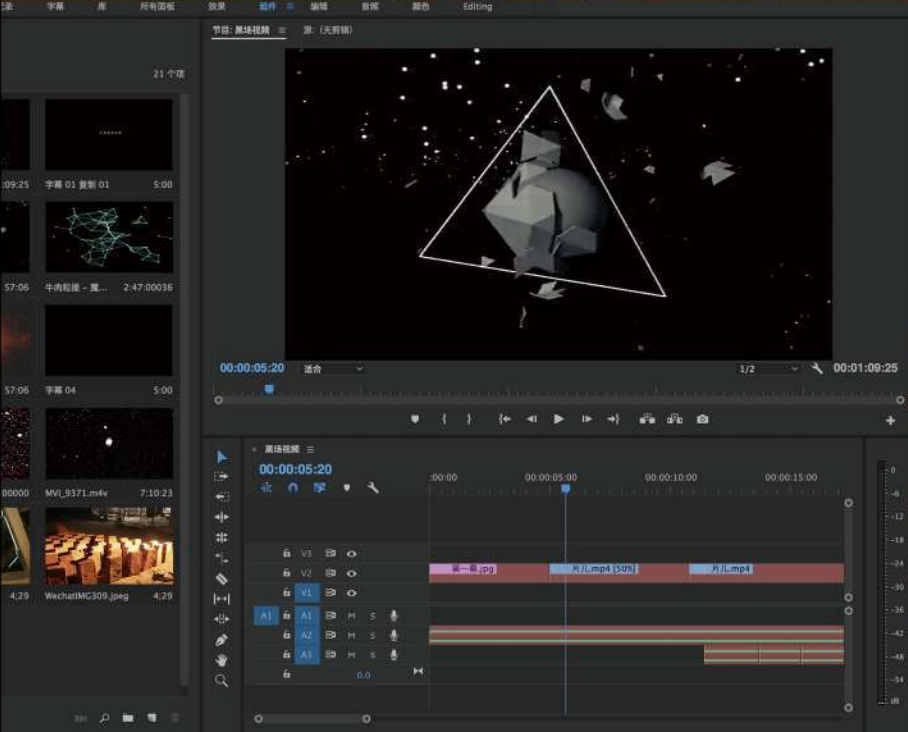

I used C4D, Processing to make a moving carbon molecular structure video. and made soundtrack with Abletonlive

From the stable molecular structure to the destruction of molecular structure combustion, and then to the final explosion. I used the MaxJitter and Arduino, the button switches the sensor to shock effect.

Triangle placed bricks dominoes can bring a strong impact from a little change, and transmitted inexorably to the people. The last row of tiles falls down on trigger button switch, let MaxJitter switch video.

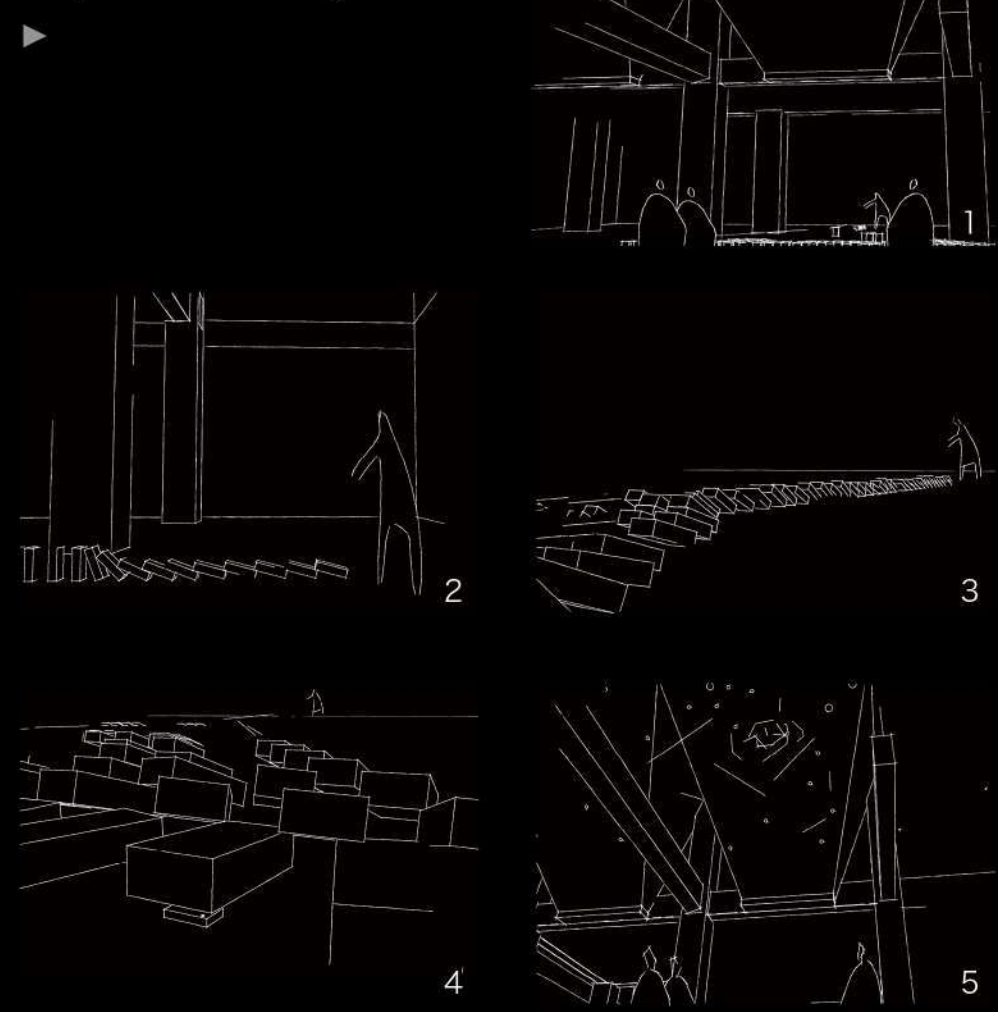

► Build processing

The Video is divided into two parts, the first part of the stable operation of the carbon molecular structure. With human intervention, carbon molecules change and finally explode.

The effect of performance

9 Determinism

Individual Work
2 Weeks
Royal College of Art

There are many possibilities for everything and the decisions made every moment have determined the world.

If a small moment has changed, it will make a huge change to the present.

There are many possibilities for everything and the decisions made every moment have determined the world.

If a small moment has changed, it will make a huge change to the present.

So now this moment is also decisive for the future.

I use dance to abstract the development of the world, and the mirror image on the right represents the diverse possibilities of the world.

When the mirror disappears and back to reality, we realize that we have nothing to do with the future and the past, except for the current decision.
